Kreolite Lug Wood Blocks
Saving"
After 5 years of very heavy traffic on a 4% grade
Well—Look at this close-up of the actual pavement!
Just imagine you're standing on Jackson Avenue, Toledo, Ohio.
First of all, of course, you notice that, in spite of the heavy traffic, there is no tendency on the part of the Lug Blocks to cobble or broom on the edges.
Then you see the Lugs themselves, providing a toe-hold for horses between the rows of blocks absolutely eliminating slipperiness in all weather conditions, on grade or level.
Observe the perfect spacing between the Blocks—and think what it signifies.
It means that there has been no expansion troubles (the Lugs compress and absorb expansion). It means that the creosote and filler has not been forced out but stays in.
Kreolite Lug Wood Block pavements after 20 years' service will look almost as good as new.
Our large stock in Toledo guarantees quick shipment and short haul.

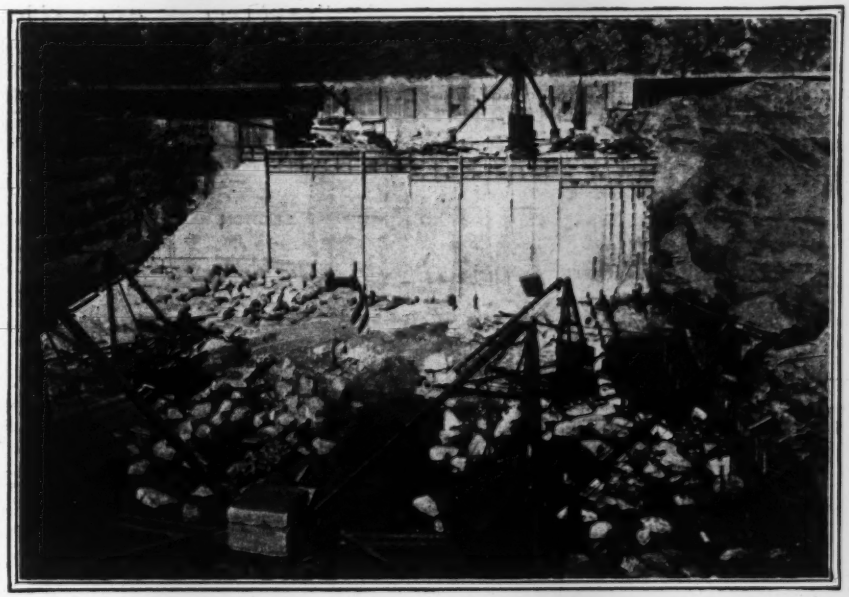
Grouting the Foundation of the Elephant Butte Dam

Upstream Row of Grouted Holes and Two Downstream Rows of Drainage Wells Serve as Telltales



By E. H. BALDWIN
Formerly Senior Engineer, United States Reclamation Service

THE foundation of the Elephant Butte Dam of the United States Reclamation Service was in rock strata of such a nature that precautions against subpercolation were thought necessary. These precautions took the form of a line of drill holes in the lowest part of the cutoff wall, which were grouted tight, and two rows of drainage wells, both upstream of the grout barrier. These drainage wells were used as detectors of percolation and, where such percolation was found, as grout holes to fill up the fissures through which the water percolated.

Excavation for the foundation was carried to a maximum depth of 100 ft. below the old river bed. The material excavated was gravel, sandstone and shale. The sandstone was in layers, separated by shale, which when first uncovered was quite hard, but quickly disintegrated on exposure to the air. The sandstone was badly fissured, in fairly uniform layers in the bottom, but at the abutments was irregular and in places showed distinct folds. When the foundation was cleaned and prepared, and before masonry was started, a number of test holes were put down with a churn drill to a depth of 20 ft. or more to make sure that a satisfactory foundation had been reached.

A typical cross-section of the dam shows the cutoff trench, grouting holes and drainage wells and their relation to the drainage gallery. By means of iron pipe, carefully set and left in place, 4-in. holes were carried up from the center of the cutoff trench, spaced 10 ft. apart, parallel to the axis of the dam, to a height of about 20 ft.; above this they were formed in concrete with collapsible metal forms 6 in. in diameter; these holes were later drilled into the rock to a depth of 45 ft. and grouted with cement under high pressure.

About 10 ft. downstream from the line of grouting holes, a series of drainage wells were formed in the concrete, spaced 8 ft. apart and starting at bedrock. A similar row of drainage wells was formed 5 ft. downstream from the upper row and staggered with reference to them. The wells vary in size from 12 in. through the central portion of the dam to 8 in. near the upper portion of the abutments, as indicated in the plan. They were carried up to an inspection gallery, which also serves as a drainage gallery, with an outlet leading to the down-

stream face of the dam and discharging a few feet above river level. From the roof of the inspection gallery these wells were continued to the top of the dam and capped with a concrete plug 10 in. thick.

The upstream row of drainage wells was drilled with a 6-in. well drill to a depth of 45 ft. below the base of the dam, to intercept and discharge into the drainage gallery any waters that might develop sufficient head to rise to that elevation. It was also planned to grout any of the wells that showed undue leakage. The downstream row was drilled to a depth of 5 ft. only.

Grouting Holes Made with Core Drills

The placing of masonry in the dam commenced in June, 1913, and in December of that year drilling of the grouting holes was started with a Davis-Calyx core drill. A Davis cutter was at first used; but on account of the hardness of the sandstone encountered, the cutter was soon changed for a shot bit, which gave excellent results. This drilled a hole 2⅝ in. in diameter with a resultant core of 1⅝ in. This drill was operated almost continuously until January, 1915, during which time 2993 lin.ft. was drilled, 1625 ft. of core recovered. Actual time in operation, 3968 hours; actual drilling time, 2913 hours.

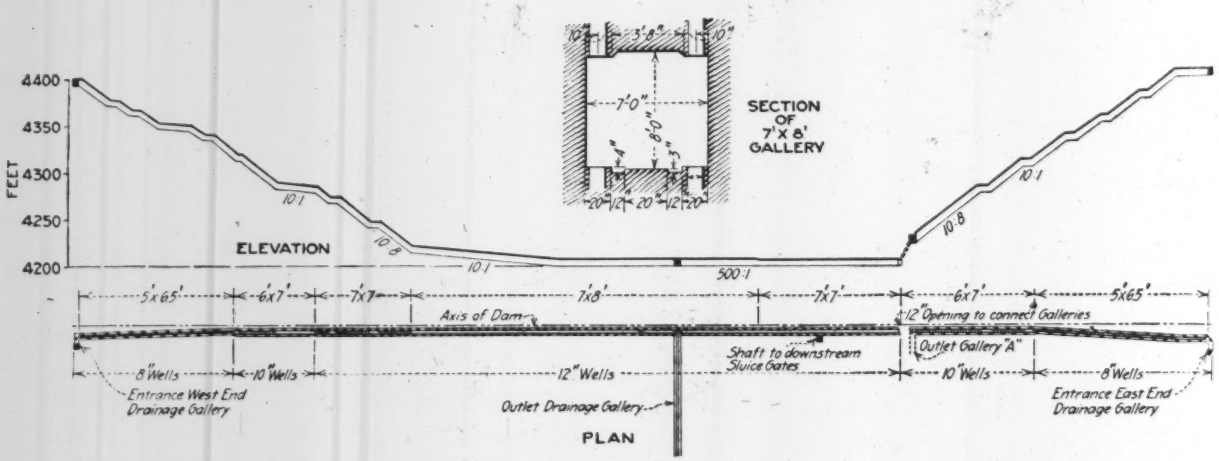
The quarry drilling was done with two 6-in. well drills; and when one of these could be dispensed with (March, 1914), it was moved to the dam and started drilling the upper row of drainage wells. As the cost of drilling with these machines was much less than with the core drill and as it was not essential that cores be recovered, when the second well drill was available (January, 1915) it was rigged with a 3-in. bit and used for drilling the remainder of the grouting holes. The two well drills drilled a total depth of 28,308 ft. Comparative unit costs of the core drills and the well drills are shown in the accompanying table.

Item of Drilling	Unit Costs Core Drill	Well Drill
Operation of drill, labor and supplies	$1.120	$0.372
Repairs: labor and supplies, including shop work	.330	.218
Rigging and moving, labor and supplies	.088	.018
Depreciation	.300	.076
Overhead expense	.127	.081
Total, per linear foot	$1.965	$0.765

In connection with the drilling costs it is only fair to state that the placing of masonry was crowded to the utmost and given the preference over other work, for which reason the drills were often operated at a disadvantage. Much of the drilling, particularly the drainage wells, was done when the dam had attained considerable height and as the drums on the well rigs were not large enough to accommodate more than 300 ft. of rope, it was necessary to substitute ⅝-in. wire rope for holes in excess of 300 ft. deep. Stretching of the manila rope was another reason for substituting the wire rope. Holes full of wood, others with crushed metal casings and still others with chains, hammers, etc., that had dropped from above and became embedded in the concrete were a source of much delay and the cause of many broken and lost tools.

How the Upstream Holes Were Grouted

Grouting of the upstream row of holes was commenced Feb. 9, 1914. The work was done with a Canniff grouting machine that had previously seen service at the Estacada dam and later at the Lahontan dam. Compressed air was piped to the dam from the central compressing plant, delivered there at a pressure of 100 lb. per sq.in., but due to varying uses at other points and to some leakage, it was rarely over 85 lb. at the machine. Water under pressure of 100 to 135 lb. was piped to the dam from the storage tank. The grouting machine was supplied from air and water mains through ¾-in. hose and pipe lines. Cement, supplies and equipment were stored in skips and moved by cableways or derricks as required.



WHERE THE GROUTING HOLES AND DRAINAGE WELLS ON ELEPHANT BUTTE DAM WERE LOCATED

After the grouting holes were drilled, they were cleaned with a water jet, which was conducted to the bottom through a hose, the pressure washing loose particles to the top and cleaning out seams and fissures. A 4- or 5-ft. length of pipe, of 2- or 3-in. diameter, with one end threaded to attach the machine coupling and the other end burred or threaded to retain a washer a little smaller than the diameter of the hole, was then set in the hole. Above the washer, cotton waste or rope ravelings were wrapped and tamped to a close fit around the sides of the hole; the pipe was temporarily held in place by a collar clamped around it about 8 in. below the projecting end. Cement grout was then poured around the pipe and allowed to set, and the pipe was kept capped until ready for grouting.

In addition to the regular line of grouting holes in the cutoff trench, many scattering holes were grouted. Throughout the body of the dam, wherever fissures in bedrock were found, 2-in. pipe was set in them; and after a mat of concrete of sufficient thickness to withstand the pressure had been placed around them, generally 4 to 10 ft., the fissures were grouted. There was naturally no regular system in the placing of these pipes; groups of fissures were usually found to be connected and often when one was being grouted the grout would flow from other pipes in the group.

Two Men Made Up Grouting Crew

A crew of two men handled the grouting except when an open hole taking large quantities of grout freely was encountered and speed in charging and handling cement became essential, or for passing cement when the outfit was located in a place inaccessible to derrick or cableway; then the force was temporarily increased accordingly. Ordinarily, one shift of 8 hours was sufficient to complete the grouting of one hole, but at times two or three succeeding shifts were worked. Operation was made as nearly continuous as possible; for when the grouting of a hole was commenced, it was found desirable, if not imperative, to complete it before stopping.

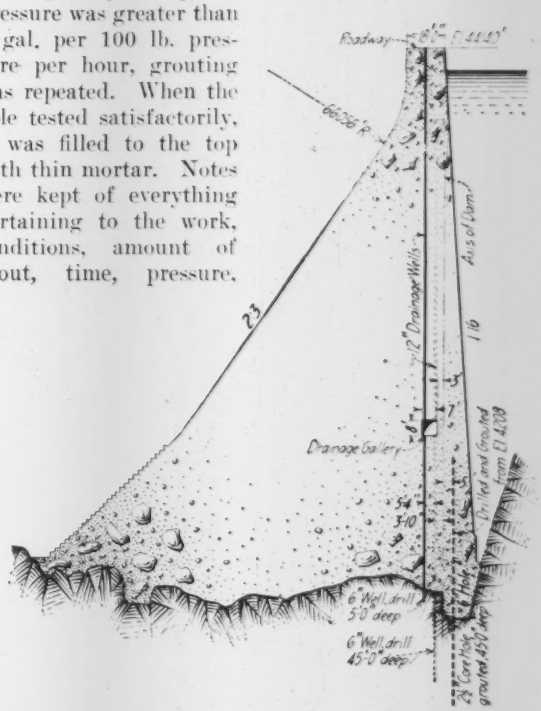
It was not practicable to adhere to any set rule for grouting, as the character of the holes was too variable and much had to be left to the judgment of the operator; but procedure was about as follows: After the hole was clean and empty of water (in tight holes water was expelled by compressed air), grouting was begun. Three proportions of grout were used: 1 part by volume of cement to 7 parts by volume of water; 2 parts of cement to 7 parts of water; and 3 parts of cement to 7 parts of water. These were referred to as 1:7, 2:7 and 3:7 charges. Both portland and sand cement were used—portland cement in tight and moderately tight holes, and sand cement where large fissures were to be filled. Sand cement was used wherever possible, as it apparently set as well as portland, mixed and handled better in the machine and was less liable to collect and choke, either in the machine or in the hole before the fissures were all filled.

The first charges were always of the 1:7 mix and usually began with a gravity head alone, continuing until the flow slackened to 1 gal. per min., when air pressures of 20 to 25 lb. were applied. These pressures continued until the flow again slackened, when pressures were gradually increased to the total amount available, when this could safely be used. It was noted that, when no external pressure existed, thin mixtures under low initial pressures had the greater radius of penetration.

Holes Were Tested for Tightness

Grouting was continued until no more grout would enter, or in connected fissure pipes until grout issued from adjacent pipes or openings in the rock beyond the concrete. Whenever possible, the operation was repeated after an interval of several days to insure a thorough filling of voids left by the excess water in the grout. While grouting, a continued lookout was maintained for grout, or air and water, coming out of surface openings near-by, and other evidences of its penetration. Holes in sandstone were usually easily grouted, for fissures in this class of rock were as a rule clean cut and well defined; on the other hand, holes in shale seldom took much grout, and seams and fissures were difficult to keep open until grouted.

After grouting, the holes were tested by filling them to the top with water and measuring the loss per hour, both under gravity and pressure. If the loss of water under pressure was greater than 3 gal. per 100 lb. pressure per hour, grouting was repeated. When the hole tested satisfactorily, it was filled to the top with thin mortar. Notes were kept of everything pertaining to the work, conditions, amount of grout, time, pressure,



SECTION SHOWS LOCATION OF TELLTALE WELLS AND GROUT HOLE

tests, material and labor. Cement was reported in units of sacks, water in gallons and air in cubic feet of free air.

Grouting was completed in August, 1916. A total of 267 holes was grouted, using 3029 sacks of portland cement and 6547 sacks of sand cement. Of these, 137 were drilled holes and 109 were fissures grouted through pipes. The maximum amount of cement in any one hole was 649 sacks, which was forced into a fissure.

Some Drainage Holes Show Seepage

The upstream row of drainage wells, as stated in a preceding paragraph, is 10 ft. downstream from the line of grouting holes, spaced 8 ft. apart and drilled 45 ft. into the rock below the base of the dam. The second row of drainage wells is about 5 ft. downstream from the first row, staggered with reference to them, but drilled only 5 ft. into the rock. In discussing the seepage, or flow, from these wells they will be referred to as U.S. and D.S., meaning upstream and downstream rows respectively.

The appearance of water flowing from the drainage wells was not unexpected. The first seepage detected was in March, 1915, from well No. 56 U.S. As soon as a well commenced discharging, it was plugged with a wooden stopper, in the center of which was screwed a piece of 1½-in. pipe, projecting vertically about 2 ft. above the hole, the upper end being fitted with a 90° elbow and a short

piece of 1¼-in. pipe. The stopper was set about 6 in. into the well and covered with cement mortar to the level of the floor. This confined the flow to a small stream that was readily measured. As the depth of water in the reservoir increased, other wells commenced discharging and were similarly treated.

The flow from Nos. 59 and 60 U.S. increased considerably after the drill hole below it was sunk, indicating that the drill had penetrated a rock seam connected with the reservoir. The record of No. 59 U.S. will be given in considerable detail, to show how the flow was finally stopped, or decreased to a negligible quantity, as this is typical of all holes similarly treated. Seepage was first noticed Apr. 26, 1916, and the well plugged the following day. Drilling operations disclosed the fact that Nos. 59 and 60 U.S. were connected. Prior to the drilling of No. 59 the flow in this vicinity was entirely from No. 60. This condition, however, was reversed after No. 59 was drilled. On Apr. 28 the flow from No. 59 was 22 gal. per min.; May 13, it was 27 gal.; May 19, it was 33 gal.; May 20, it was 56 gal.; May 24, it was 84 gal.; and on May 25, it was 85 gal., the maximum reached. At no time was there evidence of erosion; but to forestall any such action, it was decided to grout the hole. This was successfully accomplished on June 1, by forcing 121 sacks of portland cement and 29 sacks of sand cement into the well; all charges except the last were placed under gravity, the last charge being forced in under 110 lb. pressure. In August this hole was redrilled to its original depth, and a flow of 13 gal. per min. resulted. It was again grouted Sept. 10, when 46 sacks of cement were used. It was redrilled Sept. 28, the resulting flow being only 1.35 gal. per min. On Mar. 1, 1917, under about the same head, the flow was only 0.64 gal. per minute.

Few Drainage Wells Needed Grouting

Whenever a drainage well showed excessive seepage, grouting was resorted to, the result being that the total seepage, including percolation through the abutments, which were composed of very seamy rock, but thoroughly grouted, was reduced from a maximum of 120.3 gal. per min. to the present flow of 57.7 gal. per min., the height of water in the reservoir being practically the same. In every case the holes were redrilled after grouting. The maximum flow of 120.3 gal. from 230 drainage wells and both abutments, with a head of 125 ft. on 115 of the wells, is considered a remarkably good showing when the character of the foundation is known.

The drilling was done under the direct supervision of R. J. Schmalhausen, superintendent of construction. The bulk of the grouting was done by Victor Lieb, under the immediate direction of L. J. Charles, engineer, and later H. S. Stanton, assistant engineer. The entire work was done under the general supervision of the writer.

Tennessee To Build 2000 Miles of Roads

More than 2000 miles of new roads will be built in Tennessee during this spring and summer. Bonds have already been voted for this purpose and many counties have already sold the issues. Nine counties in East Tennessee are now advertising bond issues for sale, and the proceeds of which will be used on roads.

Milwaukee Air-Diffusion Studies in Activated Sludge

Problem Analyzed—Must Expose Large Air-Water Interface—Nozzles and Mechanical Beaters Eliminated—Fine-bubble Diffuser Plates Most Promising

By CARL H. NORDELL
Engineer of Designs, Milwaukee Sewerage Commission

THE article on "Air Diffusion in Activated Sludge," contributed by W. S. Coulter in *Engineering News-Record* of May 3, 1917, prompts the present writer to submit some of his own observations and experiments in the same field.

First, however, it is gratifying to learn that Mr. Coulter appreciates oxygenation of the water as the all-important point. There has in the past been altogether too much emphasis placed upon the agitation produced by the compressed air. The writer believes that the agitation in itself plays no useful part in the process except that of maintaining the sludge in suspension; and that it is a positive drawback when it becomes at all violent.

Mr. Coulter quotes Rideal as stating that ½ gal. of air is sufficient to oxidize completely the nitrogenous matter in 1 gal. of English sewage. When using 2 cu.ft. to the gallon, therefore, only some 3⅓% of the air would be utilized even for complete nitrification. This comparison, however, is not quite to the point and places the efficiency too high. The process can proceed without nitrification and would seem to be more nearly dependent upon the oxidation of the carbonaceous matter. No exact information as to the actual amount of oxygen required has been obtained, so far as the writer is aware. Some of the writer's research experiments, too tedious for detailed statement here, indicate that the treatment of Milwaukee sewage requires about 100 p. p. m. of oxygen. This would account for only about 1¼% of the oxygen in the air, as used at present. At any rate, there can be no question that the present methods of air application are extremely inefficient.

Increasing Air-Diffuser Efficiency

The problem of increasing this efficiency is stated by Mr. Coulter to be one of prolonging the contact of the air with the water. This is true if the qualifying phrase "without additional expenditure of energy" is added. One method of prolonging the contact is by using deeper tanks; but as the pressure of the air must be correspondingly increased, no very great gain is realized. Mr. Coulter proposes to prolong the contact by carrying the air downward through the water before permitting it to rise and, by means of his cone deflector, more or less "anchor" the bubbles, as it were, in descending streams of water. It would seem, however, that there is nothing to be gained by this procedure, for the energy expended in moving water against the bubble is exactly equal to that expended by a bubble moving against the water, and it is immaterial whether the energy is administered in the form of moving water or a constantly renewed stream of moving bubbles.

As for the jet-and-drive-pipe device, that is essentially a hydraulic compressor and possesses no advantage over

a mechanical compressor. Practically the same amount of energy must be supplied in either case. The jet and drive pipe, moreover, labors under a severe practical handicap. Mr. Coulter states that the drive pipe delivered air in the ratio of a volume of air to a volume of jet water at a depth approximating 70 to 80% of the kinetic head of the jet. These figures are not to be doubted, as they correspond well with the known efficiency of hydraulic compressors; but when we come to consider that the entire aërating mix would have to be sent through the jets 15 times for sufficient aëration, the difficulties are obvious.

Exposing Large Air-Water Interface

Mr. Coulter is on sure ground when he speaks of prolonging contact by subdividing the air into small enough bubbles so that their speed of ascent is lessened. The whole problem is one of exposing as large an air-water interface as possible in a given tank with a given rate of air feed. The more slowly the air escapes from the water the more of it will be in transit at any one time, and the finer the subdivision the more surface will this volume in transit expose. The total air-water interface for any given conditions of air feed and tank depth will vary inversely with the speed of the bubbles and with their diameter.

Experiments by the writer indicate that below a certain critical size of bubbles the speed falls off with the diameter. Hence, the efficiency of the air should increase with the square of the degree of subdivision. In other words, bubbles one-fourth the critical size would be 16 times as efficient as critical-size bubbles, from the standpoint of oxygen absorption. This presents very fascinating possibilities in economy, but subdivision and prevention of coalescence under the severe working conditions in the aërating tanks are not quite as easy as they may seem.

Critical Size of Bubbles in Water

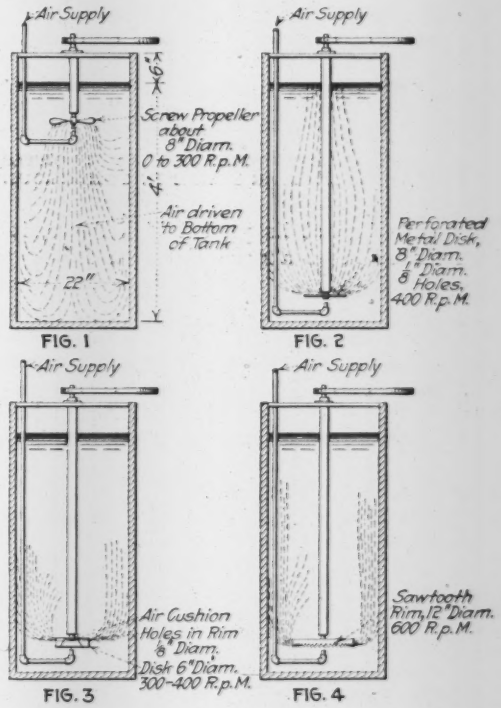
The critical size of bubbles in water is in the neighborhood of $\frac{1}{16}$-in. diameter. When larger than this, their velocity remains practically constant; when smaller, their speed, as has been stated, falls off directly with the diameter. Bubbles have a tendency toward a certain normal size, determined by the surface tension of the liquid. If they are larger than normal size, they tend to subdivide; if smaller, they coalesce. The normal size for water does not seem to be sharply defined, but lies somewhere between about $\frac{1}{16}$-in. diameter, or critical size, and $\frac{3}{32}$ in. It may be that normal size represents the establishment of truly spherical shape. Large bubbles are lenticular, and very large ones have irregular trailing faces; but the smaller ones appear to be truly spherical. Critical size seems to mark the transition from a corkscrew or zigzag ascent to a straight-line ascent.

As bubbles below normal size tend to coalesce, it is evident that fine bubbles cannot be concentrated too thickly. They must have a certain amount of room in which to maneuver. This makes it very difficult to get good results from any form of spray nozzle, such as used by Mr. Coulter, as the subdivided air must necessarily be delivered through a comparatively limited cross-sectional area; and the bubbles therefore coalesce to approximately normal size.

The writer performed a few experiments with spray nozzles and can corroborate Mr. Coulter's experience with them. The writer also tried mechanical beaters, etc., before the fundamental difficulty in delivering the subdivided air dawned upon him.

Several Devices Tried Failed To Break Up Volume of Air

It may be interesting to describe some of the devices used. The first was a screw propeller (Fig. 1). The air was well pulverized, if fed in very small amounts. Large amounts first made bigger bubbles and then very quickly stopped all propelling action of the screw by forming an air pocket around it. The revolving perforated disk shown in Fig. 2 was then tried. This did somewhat better, but the friction of the whirling disk was so great as to destroy any possible gain. The modified form in



MECHANICALLY OPERATED AERATORS TRIED IN MILWAUKEE ACTIVATED-SLUDGE STUDIES IN 1915 WERE NOT PROMISING

Fig. 3 and 4 were then employed with the idea of eliminating disk friction on the lower side by means of a partial or complete air cushion. Neither of these was successful in breaking up any respectable volume of air, the defect, of course, being inherent in the very principles involved.

In order to work the activated-sludge process with finely divided air, 25 to 50% of the tank area must be diffusing area or the bubbles will coalesce very rapidly, no matter how finely they may be subdivided to start with. It seems to the writer that this fact practically eliminates nozzles and mechanical beaters from consideration, and he has therefore devoted his time to the perfection of fine-bubble diffuser plates. These experiments are now practically concluded and will very shortly be ready for publication.

Concentrated Potash a Byproduct of Cement Mill

After-Treatment To Dilute Potash from Precipitation Process Gives 6 Lb. Potash per Barrel of Clinker

POTASH RECOVERY PLANT AT THE RIVERSIDE PORTLAND CEMENT CO.; EVAPORATING PONDS IN FOREGROUND

WITH potassium at its present high figure, it has been realized that a successful plan for recovery of this element as a byproduct in the manufacture of cement would prove most remunerative. Efforts to discover such a process have been redoubled of late, and success has finally come to the Riverside Portland Cement Co., located in southern California.

This company is now recovering 6 lb. of potassium sulphate for every barrel of clinker burned. This quantity at present prices is worth from 40 to 50c. per bbl. of cement produced. On the pre-war basis the same material would have a value of about 18c. per bbl., a figure which would still leave an attractive net profit, so that the new branch of the industry is not likely to be shortlived. The following statement was obtained by *Engineering News-Record* from John Treanor, manager of the Riverside Portland Cement Company.

Analyzing Material and Processes

Clays and shale suitable for portland-cement manufacture vary in K_2O content up to values as high as 2½%. During the past year many portland-cement raw mixtures from Eastern manufacturers were examined in the Riverside laboratories and were found to contain from 0.8 to 1.25% of K_2O.

In the ordinary burning of portland-cement raw mix, from 40 to 50% of potash content is volatilized and leaves the kiln with the kiln dust. This volatilized potash can be recovered in the form of a more or less dilute salt by the installation of suitable dust-collecting systems.

The amount of potash recovered depends upon the efficiency of the collecting devices. The efficiency of the electrical precipitators varies from kiln to kiln; the best individual kilns give results as high as 80% of the potash volatilized, while individual treaters over other kilns have an efficiency as low as 55%. A 100-ft. rotary kiln, for example, may produce anywhere from 4 to 7 tons of dust daily, whose average potash content may range between 4 and 10%.

The potash contained in this dust is usually water soluble; or if part is insoluble, it will be amenable to further chemical treatment. This potash containing dust recovered from the kiln gases can be sold as dilute fertilizer just as it is. In fact, such a byproduct is regularly being produced by the Security Portland Cement Co., at Hagerstown, Md. (*Engineering News*, Dec. 28, 1916, p. 1222), and by the Alpha Portland Cement Co., at its plant on the Hudson River.

Dust Used as Fertilizer

The use of this dust, however, is restricted to agricultural operations requiring a lime-base fertilizer. It cannot be conveniently used as an ingredient for a complete fertilizer, on account of its dilute form. The cost of freight upon 90% of inert material is burdensome, reduces the net selling price and limits the available market. The usual requirements for complete fertilization work is a salt whose K_2O content is not under 35%, and it is toward this ideal that efforts have been directed in striving for a process for recovering potash from cement plants.

The potash recoverable from all cement kilns under all conditions will be in the form of potassium sulphate. During the past five years the laboratories at Riverside have been working on the problem of deriving a more concentrated salt from this dust. One of the obstacles, however, was that only 50 to 55% of the total K_2O originally present in the dust could be extracted in water-soluble form.

Recently it has been discovered that the cause of this poor extraction was the formation of a double salt of potassium and calcium sulphate which at ordinary temperatures has a low degree of solubility. This double salt is the mineral syenite, occurring in nature. After the cause of the poor extraction was known, it needed but a step farther to remedy it; and it was finally found that by keeping the mixture at a minimum of 85° C. during the leaching and filtering process, and maintaining proper conditions of concentration, all of the water-soluble potash originally present in the dust could be recovered. Patent No. 1,220,989 is based upon this simple fact.

Percentages Recovered

For every 1% of K_2O in the raw mixture it would be theoretically possible with this process to recover 6 lb. of K_2O from each barrel of clinker, provided the volatilization is complete. Upon the pre-war basis of 3c. per lb., this would amount to 18c. per bbl., so that any economical means by which could be accomplished a better volatilization of K_2O from the clinker would be decidedly worth while. Working toward this end, a process was developed (patent No. 1,194,344) which makes use of calcium fluoride as a reagent for increasing the volatilization of potassium salts from the clinker and the regeneration of the reagent from the dust collected. This is accomplished as follows:

For every 1% of K_2O present in the raw mix, approximately 0.8% of calcium fluoride is added. This addition permits the formation of potassium fluoride, which is readily volatile and has a boiling point of about 850° C. The reaction between the calcium fluoride and the

potash in the raw mix, however, does not take place until a temperature of about 1100° C. is reached. At this temperature, which is far in excess of its boiling point, the salt will be rapidly expelled from the raw mixture and carried off with the gases of combustion and the dust.

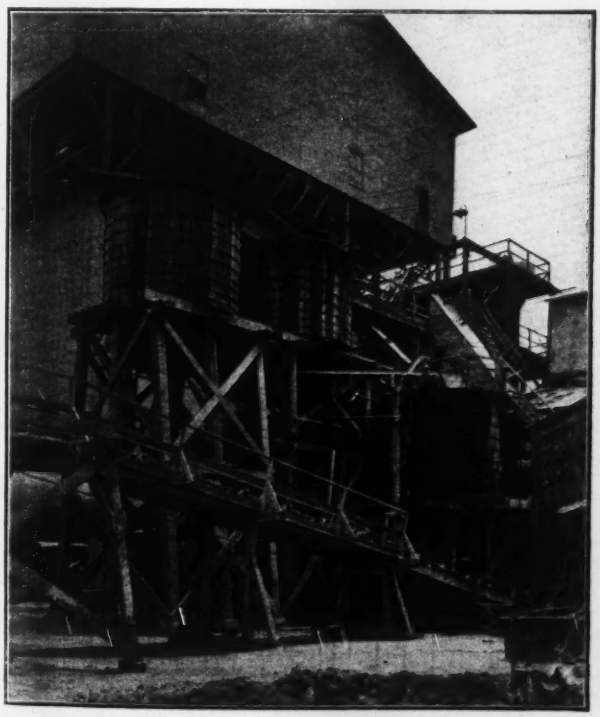
This volatilized potassium fluoride, however, does not persist in this form. It is more or less completely converted by the oxides of sulphur in the gases of combustion to potassium sulphate. This transformation is accompanied by the liberation of hydrofluoric acid, which is immediately neutralized by the lime compounds in the dust and is converted into calcium fluoride. This dust is then leached by the process already described, and the soluble potassium sulphate is separated from the insoluble calcareous and argillaceous material by filtration.

Results of the Process

The filter cake obtained by this operation is useful raw mix, containing in addition to cement-making substances all of the calcium fluoride originally used, and in addition to this the deleterious constituent, lime sulphate.

Originally it was attempted to enrich the dust by reburning it; and although this gave a very rich potash dust, the operation was extremely uneconomical. In fact, only 20% of the total potash fed into the kiln in the shape of stack dust and treater dust was volatilized. The remainder, or 80%, was driven into the clinker.

The cause of this was found to be the calcium sulphate present in the dust. In the presence of fluoride, however, the calcium sulphate decomposes, which discovery was embodied in patent No. 1,219,315. This reaction then makes it possible to again return the filter cake containing among other things the calcium fluoride to the raw mix where the calcium fluoride again performs its function of increasing the volatilization of the potash in the raw mix. By this cyclic process the volatilization at the Riverside plant was increased from 60 to 90%.



HOT WATER AND MIXING TANKS AND BELT DISPOSING OF FILTER CAKE

BAGGING THE CONCENTRATED POTASH FERTILIZER

Summing up the possibilities of recovery of potash as a byproduct in portland-cement manufacture, the experience at the Riverside plant indicates that 90% of the potash contained in the raw mix can be volatilized, 10% remaining in the clinker; 80% of the potash so volatilized in the kiln should be caught by the dust collectors. The net product, about 70% of the original input, will be still further reduced about 5% by losses in filtering. It has been demonstrated by the work at Riverside that it is entirely conservative to look for the recovery, in the form of concentrated salt, of 66⅔% of the potash originally contained in the raw cement mix, and it is quite possible that even these results may be improved upon by increase in the efficiency of the dust collectors. The resultant salt is received most enthusiastically by the fertilizer trade.

Mechanical Features of the Process

The dust is drawn from bins under the electrical treaters into tanks, where it is put into solution by agitation in water of not less than 85° C. at a concentration of not over 5% K_2O. The apparatus consists merely of cylindrical tanks some 12 ft. in diameter and 8 ft. high, which have on their axis a vertical shaft carrying ordinary propellers. The tanks are filled with water to a depth of about 6 ft., and the water is brought up to the desired temperature by means of steam injected into it.

The dust is then charged into this heated water, and the temperature rapidly rises to boiling point, due to the hydration of the lime contained in the dust. Samples are taken every few minutes, filtered, and specific gravity determined as well as percentage of solids. The potash goes into solution surprisingly fast under the conditions described. The whole operation of extracting the water-soluble potash from 7 tons of dust is accomplished in less than 50 min., and the whole control has reduced itself to a very simple basis.

As soon as a batch is cooked in one of the tanks, it is run by gravity into the filter reservoir under an Oliver filter press, where its temperature is maintained by steam coils, and the whole is kept at a homogeneous consistency by means of an agitator. The suction of the filter drum then forms a cake; and as the drum revolves, this cake emerges from the pulp and encounters a bank of hot-water sprays. Suction is applied automatically

after passing this point, to remove as much water as possible from the cake, which, when it reaches the horizontal position of the floor level, is scraped off by means of a plow.

The solution thus extracted from the cake is passed directly to storage tanks, which are at the same time settling and evaporating ponds by means of solar evaporation, which is very active in the dry climate of southern California. When the liquid has attained a specific gravity of about 1.1%, it is pumped to the evaporating pans, where the liqued level is maintained at a fixed point and the solution becomes more and more concentrated and the salt drops to the bottom. It is then raked out upon a drain board, where it is allowed to remain some minutes, and thence is deposited in a hopper, where draining continues for several hours. From this hopper it is passed through a rotary drier, thence through a Williams mill where it is reduced to the desired fineness; and finally the salt proceeds to a bin under the sacking machine.

Credit for the invention of the chemical processes employed belongs to Frederick W. Huber, chief chemist of the Riverside plant, and to his assistant, Frank F. Reath.

Diagrams Facilitate Design of Office Building and Mill Building Columns Under Eccentric Loads

Built-Up I-Sections of Typical Sizes Can Easily Be Selected When Length, Load and Moment Are Known

By W. S. WOLFE

Instructor in Architectural Engineering, University of Illinois, Urbana, Ill.

DIAGRAMS that are easily constructed and reduce to a marked degree the labor required in designing and checking columns subjected to combined axial and bending stresses, such as are produced by eccentric loads, are here shown for typical built-up I-sections.

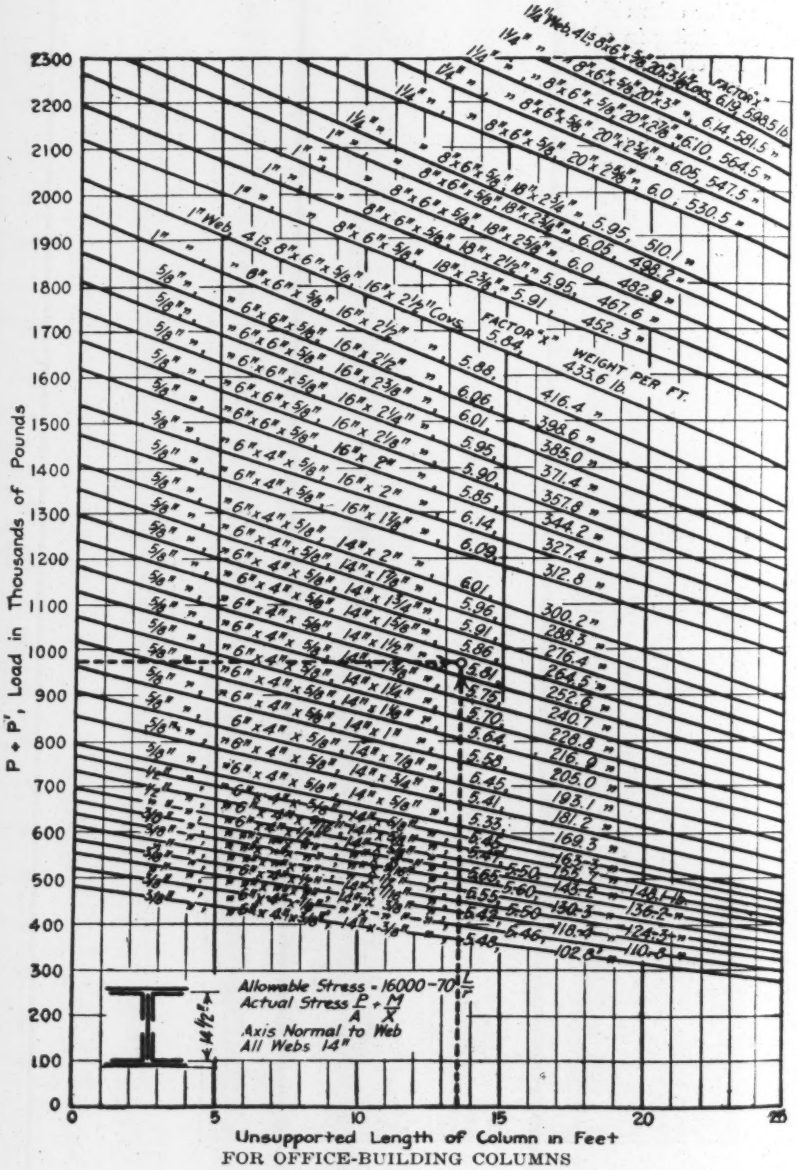
One diagram as reproduced is applicable to the design of mill-building bents, and the other to office buildings. No claim is made for completeness, as the variety and kind of sections is of course very large; but the simple principles upon which the construction of the diagrams is based are given. Hence, additional diagrams can be prepared by anyone to satisfy the particular types of column and column formula used.

Theory of the Diagrams

The approximate formula for maximum fiber stress f is

$$f = \frac{P}{A} + \frac{Mc}{I}$$

in which P is the total direct load in pounds; A, the area of the column section in square inches; M, the bending moment in inch-pounds; c, the distance to the extreme fiber; and I, the moment of inertia about the axis perpendicular to the plane of bending. Let P' be a direct load of such magnitude as to produce the same unit



FOR OFFICE-BUILDING COLUMNS

fiber stress as the bending moment M; that is,

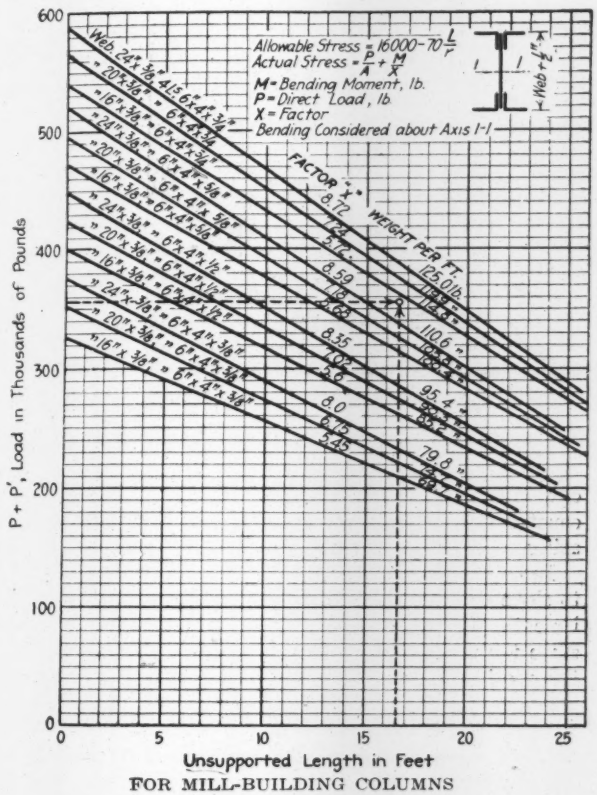
$$\frac{P'}{A} = \frac{Mc}{I}$$

or

$$P' = M \div \frac{I}{Ac} = \frac{M}{x}$$

if $I/Ac = x$, a variable depending only on the properties of the given sections.

Using the well-known straight-line formula for allowable unit stress, $p = 16{,}000 - 70L/r$, a diagram is



FOR MILL-BUILDING COLUMNS

constructed showing straight lines for allowable total load ($P + P'$) in terms of unsupported length L. On these lines the values of x are marked, also the weights per foot for comparison. The diagrams here shown have X computed for the neutral axes normal to the webs only.

How To Use Diagrams

The use of the diagrams either to investigate a given column or to select the proper section is almost self-evident. For example, given the section, direct load P, bending moment M and length: Find the line on the diagram which corresponds with the given section, read the value of x, divide it into M to get P', add the result to P and follow this sum $P + P'$ on this left-hand scale horizontally to intersect the vertical line for unsupported length. If the intersection is below the line representing the column, the allowable load is greater than the existing equivalent load, and the column is safe.

Similarly, if a column is to be designed for given loading, bending moment and unsupported length: Assume a section that seems reasonable, get the corresponding value of x from the diagram, compute $P + P'$ as before and obtain the intersection of the horizontal line for this load and the vertical for the unsupported length. If this intersection falls below the sloping line representing the assumed column, it is strong enough.

Of course, several sections may have to be tried, and the economical section will be found where the intersection and column line coincide. The advantage of the diagrams lies in the ease with which various sections can be investigated and the economical section obtained.

Effect of Fire on Reinforced-Concrete Buildings Analyzed

The destruction by fire of reinforced-concrete buildings at the plant of the Quaker Oats Co., Peterboro, Can., brings out some interesting points as to the effect of high temperatures upon structures of this kind. The fire and its effects were reviewed in *Engineering News-Record* of Apr. 5. The following additional notes are from a paper read before the Western Society of Engineers by T. D. Mylrea, engineer of tests of the City Architect's Department of Toronto, who made a thorough inspection of the buildings.

The intensity and duration of the fire are given as the main cause of the failure and collapse. It is estimated that temperatures of over 2300° F. were reached; and in the standing portion of the building the fire burned for several days, while in the collapsed portion there was considerable heat and fire even after two months. It is true that there was no fusion of the concrete, but this is due to the fact that the aggregate was limestone, which does not fuse.

In the Edison fire at West Orange, N. J., the aggregate was a variety of traprock that fused at about 2200°. In the Quaker Oats fire the 9-in. slabs heated to a degree sufficient to destroy the crystal form of the cement in the concrete and to reduce the strength of the reinforcing rods to practically nothing. Mr. Mylrea states that intensity of heat as the cause of failure of a concrete structure seems never to be considered.

"In the recent controversy over the recommendations of the Joint Committee on flat-slab regulations, both sides seem to have overlooked the effect of fire on the structures. All extensometer tests show that the stresses developed by a given load are less than the computed stresses, and this fact is variously assigned to 'dome action,' 'slab action' and 'tension resisted by concrete.' This fire brings forcibly to mind that it is possible for all these factors to be eliminated in an existing structure, and undue dependence should, therefore, not be placed upon them.

"As to the question of the amount of fireproofing required, the complete dehydration of the floor slabs proves that it is possible to raise the temperature of a 9-in. slab to 1250° F. completely through. This would show that it is possible to reduce the strength of the steel by about 50%, even if placed 4½ in. from the surface. The depth of calcination of the aggregate shows that a temperature of 2000° F. was reached at a point more than an inch from the surface. These facts show that it is impossible to afford absolute fire protection to the reinforcement and do so economically."

Bascule Bridge at Syracuse Typical of New York Canal Crossings

Skew of 23° Led To Using Fixed Floor Over Counterweight Pit —Small Movable Sections Along Girders Provide Clearance

By ARTHUR G. HAYDEN

Bridge Designer, Barge Canal Office, Albany, N. Y.

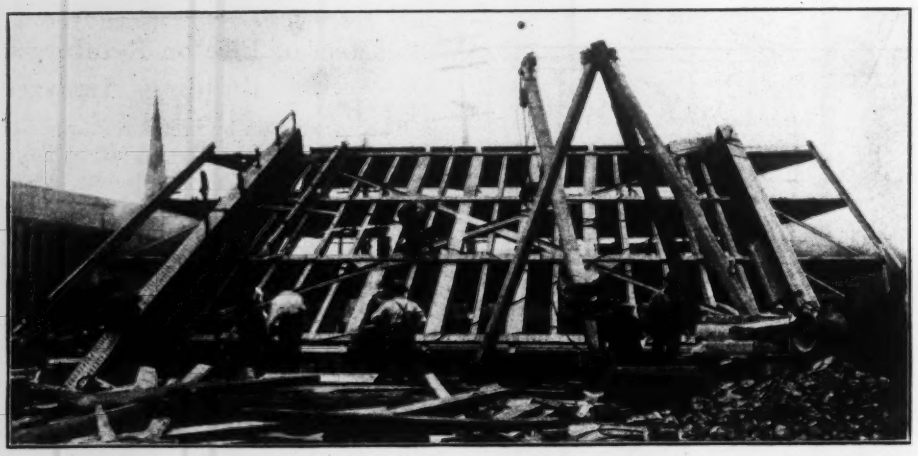


FIG. 1. SKELETON OF WEST GENESEE ST. SKEW BASCULE OVER ERIE CANAL AT SYRACUSE

SHORT-SPAN bascule bridges of the trunnion type, of which several have been built in recent years by the State of New York, often involve special problems. The most recent, the West Genesee St. bridge over the Erie Canal in Syracuse, N. Y., is complicated by a skew of about 23°, for which reason the floor over the counterweight pit was made stationary instead of part of the moving structure. The tail of the bridge is wholly below this floor (Fig. 1).

The arrangement of structural parts is shown in Fig. 3. The main girders (two) are supported on trunnion pins whose axes are in the same line and parallel to the front wall of the pit. The pins are therefore skew with the center line of the girders, which are supported on them by means of cast steel bearings (Fig 5) to which the pins are keyed.

The lift end of the bridge is parallel to the trunnion line, as are also the floorbeams, which makes the bending moments and consequently the counterweighting alike for the two girders. This condition would not hold if the intermediate floorbeams were placed square to the main girders.

The bridge is balanced by a concrete counterweight carried on extensions of the main girders back of the pins into the counterweight pit. The floor over the counterweight pit is stationary; it consists of longitudinal I-beams between which are sprung concrete arches.

Back of the trunnion pins the bascule girders descend through openings in the floor when the bridge is raised. This construction makes unnecessary a heel lock with its operating mechanism to carry the live-load back of the pin.

In consequence of the skew, the main girders are made to slope downward back of the pins as rapidly as possible beneath the pit floor. As the bridge is being raised, since the main girders do not rotate in their own planes, the motion of all points on each girder has a sidewise component out of the plane of the girder. Consequently a small triangular portion *MNO* (Fig. 3) of the floor back of the trunnion pins is made part of the moving structure to provide a clear opening for the parts of the girder above. The size of the moving sections of the floor is determined by the point where the girder passes beneath the pit floor when down and it is obviously of advantage to have this as small as possible, consistent with other clearances. In the case of square bridges the girders rotate in their own planes and may be carried to their full height to the back of the pit, the openings through which they descend being entirely in the sidewalks and equal only to the girder width plus clearance. (See description of Franklin St. bridge, Syracuse, *Engineering News*, Sept. 21, 1916.)

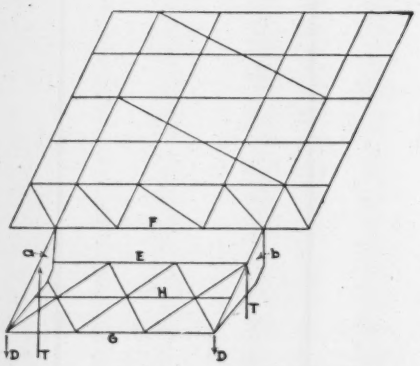

FIG. 2. SCHEME OF BRACING TO CARRY DEAD WEIGHT IN RAISED POSITION OF BRIDGE

On account of the skew, the lateral bracing performs an important function in carrying the dead-load of the bridge when raised, as will be seen from the diagram, Fig. 2, the plane of the paper being supposed vertical. Here the reactions at the trunnion pins are shown by *T*.

the counterweight loads by *D*, the trunnion end floor beam by *F*, and the limits of the lateral bracing back of the pins by *E* and *G*. The bridge floor proper ends at the front wall of the counterweight pit, finishing against an apron attached to the trunnion end floorbeam *F*. The front wall of the pit interrupts all steel work between *E* and *F* (see Fig. 1) except the main girders and parts of the wing girders *a* and *b*, for which recesses are made in the wall. The wing girders *a* and *b* are attached to the bottom flange of the main girders, are perpendicular to the main girders and when the bridge is raised carry the sidewise bending moments (due to the dead loads) across the gap between *E* and *F*, at which point the lateral bracing is interrupted.

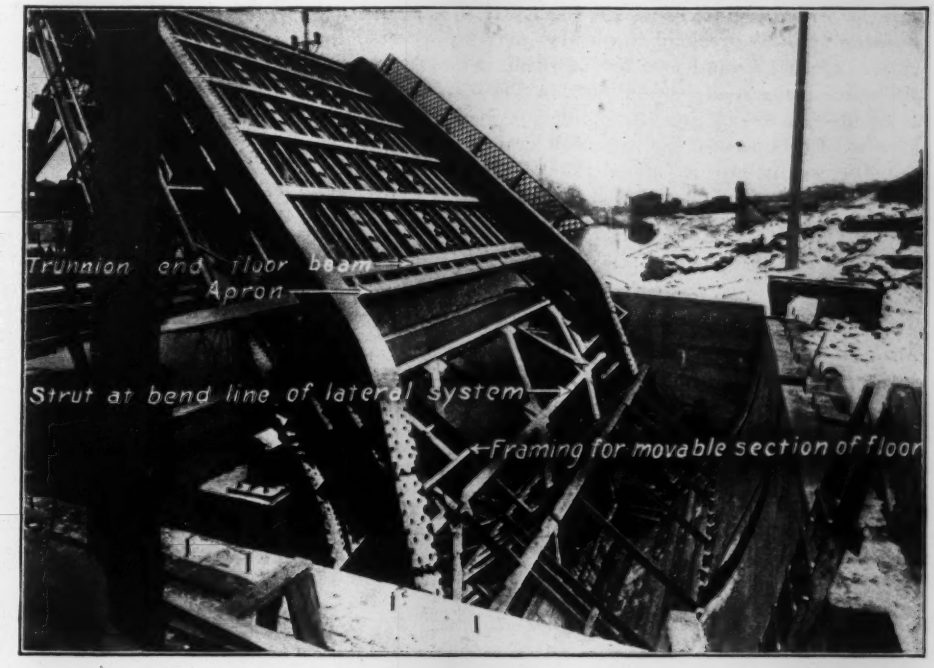

FIG. 4. TAILPIT DURING ERECTION SHOWS FORM FOR COUNTERWEIGHT

All lateral bracing is in the plane of the bottom flange of the main girders and is deflected downward at strut *H* (see Fig. 1) so as to terminate near the line of center of gravity of the counterweight. The lateral system is so designed that there is no computed component of stress perpendicular to the plane of the laterals at the bend line on strut *H*.

Two of the four lines of track stringers serve to carry the dead weight of the floor, when the bridge is raised, to the intersection points of the laterals in the fifth panel from the top and thence to the main girders.

The operator's house is placed on the side of the canal opposite the counterweight pit so as to obtain a clear view of the canal when the bridge is raised. All operating machinery (the racks excepted) is carried on the concrete counterweight and is a part of the moving structure. Two 20-hp. electric motors, placed at one end of the counterweight, drive through a train of gears the two rack pinions, which mesh with racks placed on the curved backwall of the pit. (See Fig. 3.) Each motor is operated by a drum controller having eight points forward and eight reverse, installed in the operator's house. The cable conveying the current from the controllers is carried through a tunnel under the bed of the canal. The cable terminates in a knife hinge, by means of which the current is delivered to the motors, one arm being attached to the front wall of the pit and the other to the moving part of the bridge.

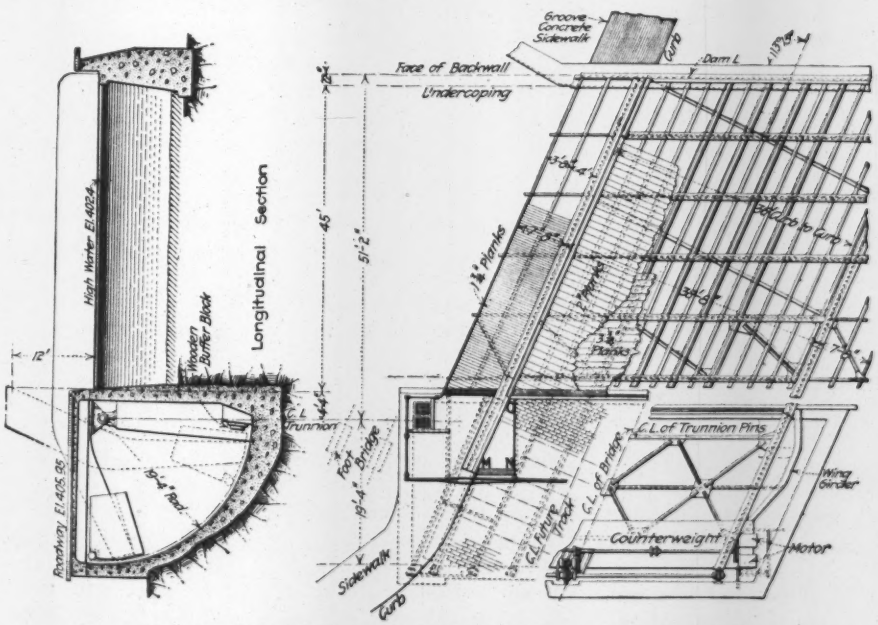

FIG. 3. GENERAL PLAN OF WEST GENESEE ST. BRIDGE

Each controller is equipped with a gear on the cylinder shaft meshing with an idler connecting the two gears. Each gear is in two concentric parts which will move independently of each other unless a pin is placed to lock them together, so that it is possible to operate either motor independently of the other, or both in parallel. Ordinarily both motors work together, but in case of accident to either the damaged motor may be thrown out of train

and the bridge operated with the other. With both motors working at 50% overload the bridge may be operated in 70 sec. against a wind pressure of 15 lb. per sq.ft., ample allowance being made for friction in the machinery.

In the closed position, the bridge is locked by means of a toe lock operated by rods, bell cranks and lever, of the type used in railroad signal towers. The lever, located near the controllers in the operator's house, is electrically interlocked with them, so that it is impossible to operate the bridge unless the bolt is in the withdrawn position.

Two mechanically operated safety gates are located at each end of the bridge. Those at the end near the operator's house are operated by rods, bell-cranks and a lever of the same type used for the lock bolt, and are mechanically interlocked with the lock-bolt mechanism to insure the gates being lowered before the lock bolt is withdrawn and not raised until the lock bolt is in the closed position. The two gates at the trunnion end of the bridge are operated by means of cables attached to the bridge counterweight.

Loading—The bridge was designed to carry the following loads at 16,000 lb. per sq.in. unit stress:

Two lines of 50-ton electric cars, with 25% impact; two 15-ton motor trucks on any part of the roadway, with 25% impact; uniform load of 150 lb. per sq.ft. on any part of the roadway not occupied by the concentrated loads; 100 lb. per sq.ft. of clear sidewalks.

Chicago Meters Only 21% of Its Water

Only 21% of the total amount of water pumped from Lake Michigan into the Chicago mains passed through meters in 1916. The city used an average of 620,000,000 gal. daily, equivalent to 249 gal. per capita and 2066 gal. per tap. Of the 20,768 meters in use, 1329 were put in service during the year; but the whole number covers only 6.9% of the service pipes, although 47.2% of the receipts are received from metered water.

Vagaries of Expansion and Contraction Movements

Unexpected irregularity of expansion and contraction movements in the steel-frame superstructure of the 3000-ft. municipal pier at Chicago is stated to have been one of the main causes of trouble with the concrete floor slab and concrete incasement of the steel floor-beams, noted in *Engineering News-Record* of Apr. 26, p. 829.

Expansion joints were provided at intervals of 100 ft., with provision for the steel longitudinal beams to slide upon their supports and for the concrete slab to move upon felt strips upon the floor-beams. The joints were designed to allow ample movement at each point. Actually, however, the movement of the steel frame did not distribute itself in this way, but concentrated at two of the expansion joints near the midlength of the pier and 100 ft. apart. Here, bolts in the slotted holes were sheared off, the movement being greater than that provided for by the slots, although the beams are stated to still have ample bearing upon their supports.

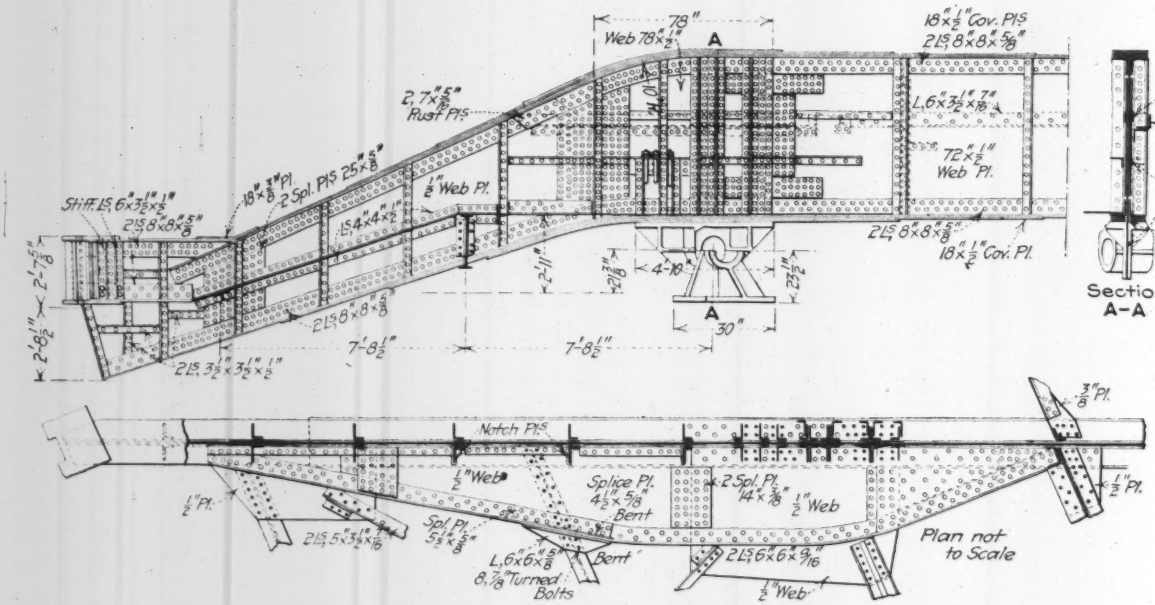

FIG. 5. TRUNNION AND GIRDER OF WEST GENESEE ST. BRIDGE

At other points the relative movement of the concrete slab on the steel framing was sufficient to crack the slab free from the concrete incasing the I-beams, as already described. It has been suggested that this trouble might have been avoided by making a joint in the concrete casing under the floor-beam as well as in the slab on top of the beam. On the other hand, it is thought that, with such irregular and unexpected movements as did occur, there would have been some trouble in spite of any such additional provision. Another afterthought was the placing of a small copper gutter under each expansion joint in the slab, to prevent any water from working down between the concrete and the steel. If such a plan had been proposed originally, it probably would have been considered unnecessary and its cost prohibitive, while its efficacy is held doubtful in view of what actually happened. In any case, as already explained, the troubles did not affect the strength or stability of the structure.

Dock Wall Built for a River-Front Building

Proximity to Seven-Story Structure at Chicago Made Underpinning Important Feature of Work

A 420-FT. concrete dock wall on the Chicago River has been built to improve the frontage of the J. V. Farwell & Co. property between Adams and Monroe Sts. The face of the wall being only about 8 ft. from a seven-story building, special care was necessary to avoid disturbance of the building foundations, which were strengthened in connection with the other work. The construction is shown clearly in the accompanying drawings.

The original dock wall or bulkhead consisted of a row of round piles 2 ft. apart, with timber cap and fenders, and was backed by three lines of 3-in. wood sheet piling to retain the fill. For the new work the piling was cut off about 12 in. below the water line, and a 12 x 12-in. wale was placed on the outside. When the work was ready for concreting, the sheeting was cut to grade. Fig. 1 is a typical section of the work.

To hold the piling in position while the building wall was being underpinned and the concrete placed for the dock, tie-rods were run from the waling timber to an anchorage behind the footings of the second row of interior columns of the building. The first row is only indicated on the drawing. This anchorage consisted of a pair of 12-in. steel channels laid flat, back to back, with steel separators between them so as to give room for the rods to pass through. The channels are embedded in concrete, which is filled in against the back of the footings in order to give ample bearing.

Timber forms were built along the front of the dock and anchored to the wall of the building. The water was not pumped out, the cutting of piles and placing of new wales being done in the water, only about 2 ft. below the surface. The concrete of the base of the wall was deposited in the water. The fill behind the old sheet piling was cleared away to a depth of about 18 in. below the water, and planks laid between the round piles served as the bottom for the front part of the form.

The concrete was a 1:3:5 mix (made with stone), care being taken to secure a dense mass and surface. It was made in a floating plant and spouted into place. The wall was built in sections about 50 ft. long. No fender timbers were placed along the face of the wall. Mooring posts were proposed, these being hollow castings fitted upon and grouted to pipe anchors embedded in the wall, as shown. However, the old snubbing anchors were used instead.

As noted above, the work included the strengthening of the foundations of the building. The front wall was carried by piles capped by a timber grillage above the water line and embedded in the earth-fill. This wall was underpinned to permit removing the grillage and cutting off the pile heads to about 1 ft. below water. Then a continuous concrete footing was put in, extending 6 in. below the tops of the piles. The interior columns had masonry footings in good condition.

For the permanent anchorage of the new footing and dock wall, 1¼-in. rods were run from the steel channel anchors, previously mentioned, to large washer plates embedded in the new concrete footing. Other rods are attached to similar plates in this footing and extend into the base of the concrete wall. At each column footing there are two tie-rods, which are cased in concrete. Between the footings of the first and second rows of interior columns the concrete casing is increased in width so as to form struts between the footings. In this way both rows of footings are utilized as anchorages.

At one corner of the building four caisson (or concrete-pier) foundations were put in on account of the necessity of cutting off the projecting footings of the north wall for placing the abutment for the new Monroe St. bridge. One of the concrete piers was placed beneath the corner of the building, two others about 18 ft. each way from the corner, with the fourth under a heavy vault. They carry the load to hardpan at a depth of about 65 ft. below water. The three outer piers are 5 ft. in diameter, belled out to a bottom diameter of 10 ft., where they rest on the hardpan. The pier under the interior corner is 4 ft. in diameter, belled out to a 6-ft. base. Lines of I-beams, embedded in concrete, rest on the piers and form girders to support the walls of the vault and building.

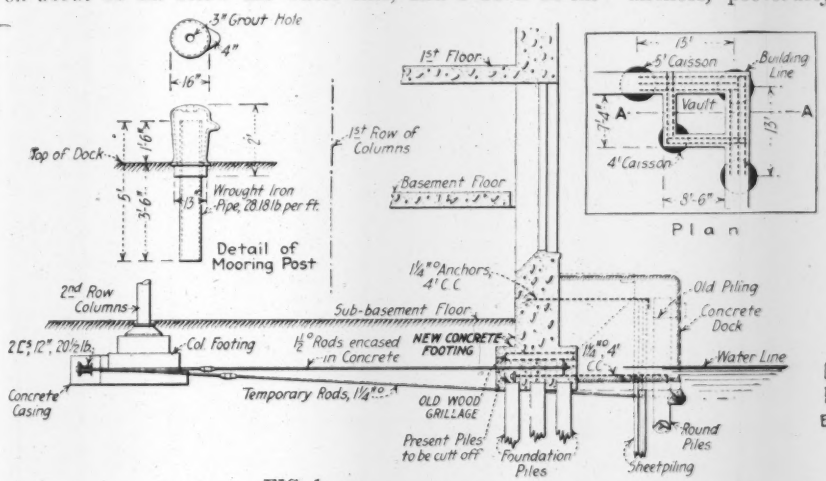

FIG. 1

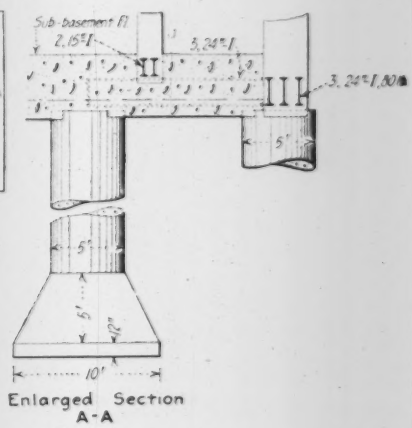

FIG. 2

FIG. 1. NEW RIVER-FRONT WALL AND UNDERPINNING OF BUILDING FOUNDATIONS. FIG. 2. CONCRETE PIERS CARRY CORNER OF SEVEN-STORY BUILDING

The dock wall and the reinforcement of the building foundations were designed by E. C. & R. M. Shankland, of Chicago, as consulting engineers for Perkins, Fellows & Hamilton, architects for the owner. The Ruud-Nilsen Co. had the contract and sublet the pile and concrete work to the Fitzsimons & Connell Dredge and Dock Company.

Busy Street Repaved Without Stopping Street-Car Traffic

Recut Granite Block Laid Between Rails—Asphalt Paving Is Used on the Main Roadway

REPAVING Gay St. with asphalt for the driveways and recut granite blocks for the car tracks in an important work now being carried out at Baltimore, Md. The street is 2¼ miles long, 28 to 49 ft. between curbs, and is one of the busiest thoroughfares in the city. The car line is mainly double track, but with some single track in the narrow portions. The old stone pavement has been in service about 35 years. It consisted of granite blocks 8 to 12 in. long, 4 to 5 in. wide and 6 in. deep, laid on a sand foundation and with sand filled in the joints.

In the new construction, the sides of the roadway are paved with asphalt on a 6-in. concrete base, there being a 1½-in. binder and a 1½-in. wearing surface. The old 6-in. granite curb is left in place, except where necessary to redress and reset it, but long-radius curb circles are being put in at all corners. Vitrified-block gutters about 12 in. wide are installed along the curbs. The track space between outer rails is paved with recut granite blocks on concrete, with cement filler, and two rows of granite-block liners are laid outside of each outer rail.

The street roadway is closed to traffic during the work, such crossings being kept open as may be necessary, and at least 14 days are allowed for the setting of the concrete base. The street-railway tracks are kept open for traffic throughout the repaving, this being made practicable by the use of a grouted stone ballast for their foundation. The work is divided between the contractor (for the city) and the street-railway company's forces.

Paving Done by the Contractor

The first work is the removal of the old blocks, which are loosened by means of 1-in. steel bars 6 ft. long, pointed at one end. They are hauled to adjacent lots, where they are recut for use in paving the track space. The blocks being removed, the contractor grades both the city's space and the track space down to the subgrade of the paving. He also adjusts the curb as required.

After the railway forces have done their work, as described below, and have brought the grouted ballast up to a level about 2 in. above the bottom of the ties, the contractor again takes charge. He dresses up the subgrade for the pavement and places the concrete base on the subgrade and over the grouted ballast of the track space. The recut granite blocks are then laid between the rails, the liner blocks are laid outside the outer rails, and the vitrified-block gutters are put in, all with a cement filler. After allowing 14 days for the concrete to set, the asphalt paving is laid in the roadways; and the street is opened for traffic as sections of this final work are completed.

Railway Work with Grouted-Ballast Base

When a certain amount of track space has been made ready by the contractor (as above), the railway forces take charge and grade it down to 6 in. below the bottom of the 8-ft. ties, to make room for the new ballast. The old 7-in. girder rails and hewed-pine ties are replaced with 7-in. grooved-girder rails secured to sawed-oak ties by screw spikes. The new rails and ties are placed at night (after midnight), so that cars can be operated. The next day the rails are spiked and splices bolted. Stone ballast for each track is dumped in place from cars on the other track, being distributed by moving the cars ahead while dumping. The track is then raised to grade and is lined and surfaced on the ballast.

After the track has been well tamped, mainly by compressed-air tools, a portable concrete-mixer outfit with gasoline engine is run alongside the track, and cement grout is spouted over the broken stone to fill all voids and form a grouted concrete base. The sand for this grout is dumped from cars and then shoveled over toward the curb to make room for the mixer. Wherever loose ties develop during the grouting, they are at once tamped to a solid bearing.

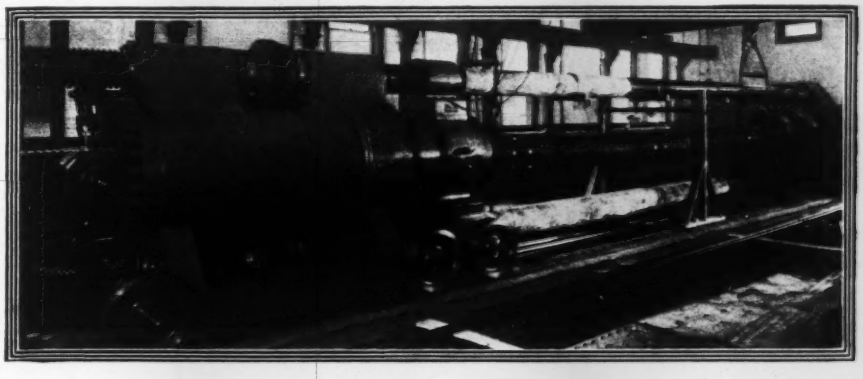
This improvement is under the jurisdiction of R. Keith Compton, chairman and consulting engineer of the Paving Commission of the City of Baltimore, with Frank K. Duncan as principal assistant. The contractor is the Baltimore Asphalt Block and Tile Co. The track work is being done by the United Railways and Electric Co., of Baltimore, with W. W. Wysor, acting chief engineer, and J. M. Hood, Jr., consulting engineer. The paving work, including that within the track space, will cost approximately $112,000, exclusive of track work.

Underground Streets Proposed for Chicago

The building of underground streets at Chicago for the use of street vehicles, electric cars and pedestrians is suggested by the Board of Local Improvements, in connection with rapid-transit developments. This step would make the proposed rapid-transit subways unnecessary. The work would be paid for partly by special assessment on the frontage property benefited and partly by drawing on the city's traction fund (55% of the net earnings of the street-railway companies) for such proportion of the cost as would represent special public benefit. The board, which deals with all improvements built by special assessment, states that its attorneys find it has the right to construct such streets by special assessment and to draw upon the traction fund as proposed.

The subway streets would extend between the property lines. Plans and estimates are to be prepared by the engineers of the board, after which public hearings will be held and an ordinance then prepared for action by the City Council. If this ordinance should be passed, the next step would be to petition the court for levying the assessment. The selection of the streets in which these municipal subways would be built will be left until after the public hearings. According to a published statement, the board considers that subways should not be built by public funds alone, but that property owners benefitted should be assessed.

Important Series of Steel Column Tests Establishes Principles of Strength



Reliable Data on Strength of Modern Steel Columns Provided by Over 200 Column Tests at Bureau of Standards—Strength Found To Depend on the Compressive Yield-Point of the Steel

THE completion of the remarkable series of column tests conducted at the Bureau of Standards during the past three years permits of presenting a brief summary of the results. This series, the largest consistent group of column tests ever made—in fact, virtually the only important modern series—lays a new experimental foundation for conclusions concerning the design and the strength of steel columns.

What the Results Demonstrate

The results demonstrate the reliability of steel columns, their efficiency in respect to utilizing the full strength of the steel, the weakness or inefficiency of tie-plated construction, and the unsuspected weakness which may be introduced by inherent qualities of the steel. It merits special remark that the tests are not only consistent but highly precise—due partly to the care used in the design, in choosing the material, and in manufacturing the columns, and partly to the skill and scientific procedure applied to the work of testing. The large Emery testing machine in the Washington laboratory of the Bureau of Standards made an excellent record of performance with these tests. Painstaking work was done by the testing laboratory force of the bureau, under the leadership of Dr. George R. Olshausen, Engineer-Physicist.

The strength figures obtained in the tests are available in entirety, though the full laboratory details have not yet been worked up. The strength figures have been published in part by the American Society of Civil Engineers and in part by the American Railway Engineering Association, whose committees on steel columns requested the tests. The results are here for the first time brought together.

Great Differences in Strength Found

The tests were based on the idea of securing uniform material for the entire series. Specifications for the steel were drawn with great care, and the limits of strength, qualities, etc., were set closer than those fixed by current commercial specifications. The mills which furnished the steel and the shops that fabricated the columns made conscientious efforts to furnish material of excellent quality, as uniform as it can be made, and yet of commercial grade.

The results indicate, however, that in spite of this fact there were very important differences of strength in the material. No one could have predicted in advance of the tests that a certain pair of columns, for instance, would not show substantially equal strength, whereas in the testing machine one of these was found to be over 30% weaker than the other. Such differences occurred again and again. They form the most prominent feature of the results of the tests. Equally large differences of strength may occur in the steel columns used in bridges and buildings, so far as any test knowledge goes.

Size and Character of the Columns Tested

The columns embraced in the tests ranged from 8.6 to 27 sq.in. in sectional area, or from less than 100 to several hundred tons ultimate load capacity. Their lengths, ranging up to 30 ft., were so chosen as to give ratios of total length to radius of gyration up to 155. The shortest were really short compression blocks, of length equal to 20 times radius of gyration. However, since the columns were tested with square ends and actually exhibited two points of inflection when loaded, the real slenderness-ratios (based on hinged or round ends) ranged from 10 to 75. In other words, the tests did not include columns as long as are allowed in standard bridge and structural practice.

Two different ideas were incorporated in the design of the test columns. The columns of one group, constituting the tests made for a committee of the American Society of Civil Engineers, were of solid section, that is without lattice, in order to furnish information on the dependence of column strength on slenderness ratio and on the shape of cross-section, and to eliminate as far as

possible the detail weaknesses likely to be present in columns assembled with lattice bars. For a like reason these columns were all tested with plain ends, the ends of the column shafts abutting directly on the heads of the testing machine; base and cap details being omitted, there was no opportunity for change in the conditions of the test on account of local yielding, except for actual body yielding.

The columns of the American Railway Engineering Association were built of open section, with connection by lattice and in some cases by tie-plates. The purpose was to deduce figures directly applicable to columns of the form most commonly used in structures other than buildings. Most of these columns were fitted with wing plates and bed or cap plates.

Tensile Tests Prescribed for Material

The material ordered for making the columns was specified to have an ultimate strength, in small-size tensile tests, of 58,500 to 61,500 lb. per sq.in. (as compared with 56,000 to 64,000 in ordinary practice) and a yield-point lying between 37,000 and 39,000 lb. per sq.in. (as compared with 36,000 in ordinary practice). Except for the divergences expressed by these figures, it is identical with regular bridge and structural steel. The control of chemical composition and rolling was in the main left to the mill, the mechanical test requirement being the governing one. These requirements applied to all material, irrespective of thickness or shape.

The analyses showed that practically no chemical differences existed, so that the securing of equal yield-point in the thick and the thin material must be credited to differences of procedure in the rolling mill.

Special attention should be given to the fact that the various lots of steel were made alike in tensile properties but could vary in other respects. The sequel showed that they were very far from being equal in compressive properties.

How the Tests Were Made

To prepare a column for testing, its ends were milled exactly square in the Bureau of Standards shop; as milled in the bridge shops, the ends were not sufficiently square and true for good bearing in the machine. The testing machine has only one adjustable head, and the rigid head obviously requires a truly square column-end if correct axial alignment is to be secured. The milling machine used was equipped with a special carriage running on rails bedded in the shop floor at right angles to the milling machine slides, and by clamping the column against stops on this carriage its axis was placed at right angles to the cutter-head plane.

Concentric circles inscribed on the faces of the testing machine head furnished means for centering the ends of the column quite perfectly. When in position the column was clamped by applying a load of 1000 lb. per sq.in. of cross-section. Columns having a slenderness ratio greater than 50 were counterweighted at mid-length to the amount of half the column weight.

Five Extensometers Applied

Five extensometers were applied, one at each corner and one in the middle of the top face of the column. These were roller extensometers of the Howard design read by Ames dials, attached to extension bars to span various gage-lengths up to about 20 ft. Near the ends and center, shorter-length strain measurements were made at eight pairs of gage points on 8-in. gage lengths with Berry strain gages. Attachments were made to register the center deflection of the column in two directions at right angles to each other, by means of dial gages.

The test routine was such that measurements of the set or non-elastic compression were obtained in sufficient number to permit plotting a set curve. Generally, the testing program called for running the load up by increments of 5000 lb. per sq.in. between releases (and 1000-lb. increments above 15,000 lb.), to the first pronounced change in the rate of compression. The load was then run up continuously to the maximum.

All columns were in triplicate, there being three of each length and shape. In each case one of the three was compressed considerably beyond the failure point in order to emphasize the type of buckling developed.

Normal and Abnormal Kinds of Buckling

Illustration of what was obtained by the excess deformation is furnished in the view, Fig. 1, showing columns after testing.

Integral buckling of the columns was by far the most common manner of failure, not merely at maximum load but even under the additional compression. The curve assumed by the column in such a case is exemplified by the photographs *B* and *F*, Fig. 1. Both the solid-section columns and the latticed columns failed by bodily buckling. None showed evidences of local failure (as at the end-connection wing plates, in the lattice, or in the unsupported lengths between lattice bars) prior to the point where maximum load was reached. Further, most of the columns when forced far beyond the failure point buckled into a smooth curve, showing that they developed the full efficiency of the column.

While local or detail failure was rare, some of its manifestations were of noteworthy character. The tie-plated columns of the A.R.E.A. series failed in most cases by buckling between the batten plates. That they did not utilize the strength of the metal in full degree is proved more definitely by the ultimate strengths (Table II), which show surprisingly low figures for all these columns. On the average, the tie-plated columns were only half to two-thirds as strong as latticed columns of equivalent size and length. But as explained in a footnote to Table II, the tie-plate spacing was in all cases so wide as to make the slenderness-ratio of the individual channel between tie-plates much larger than that of the whole column.

A New Phenomenon—Rotary Buckling

All the Z-bar columns of the thin sections failed in the curious manner shown by *A* in Fig. 1. The middle rotated around the column axis, while the ends (held by the machine heads) stayed in original position.

This twisting appeared to be a rotary buckling. The four outstanding legs of the Z-bars tend to buckle, and this tendency produces a tangential reaction around the column axis as center of twist. If two of the four Z-bars should tend to buckle in one direction, and two in the other, balance might exist; in all other cases the net result would be a tendency to twist the middle part of the column relative to the ends. When the twisting moment becomes great enough to overcome the torsional resistance

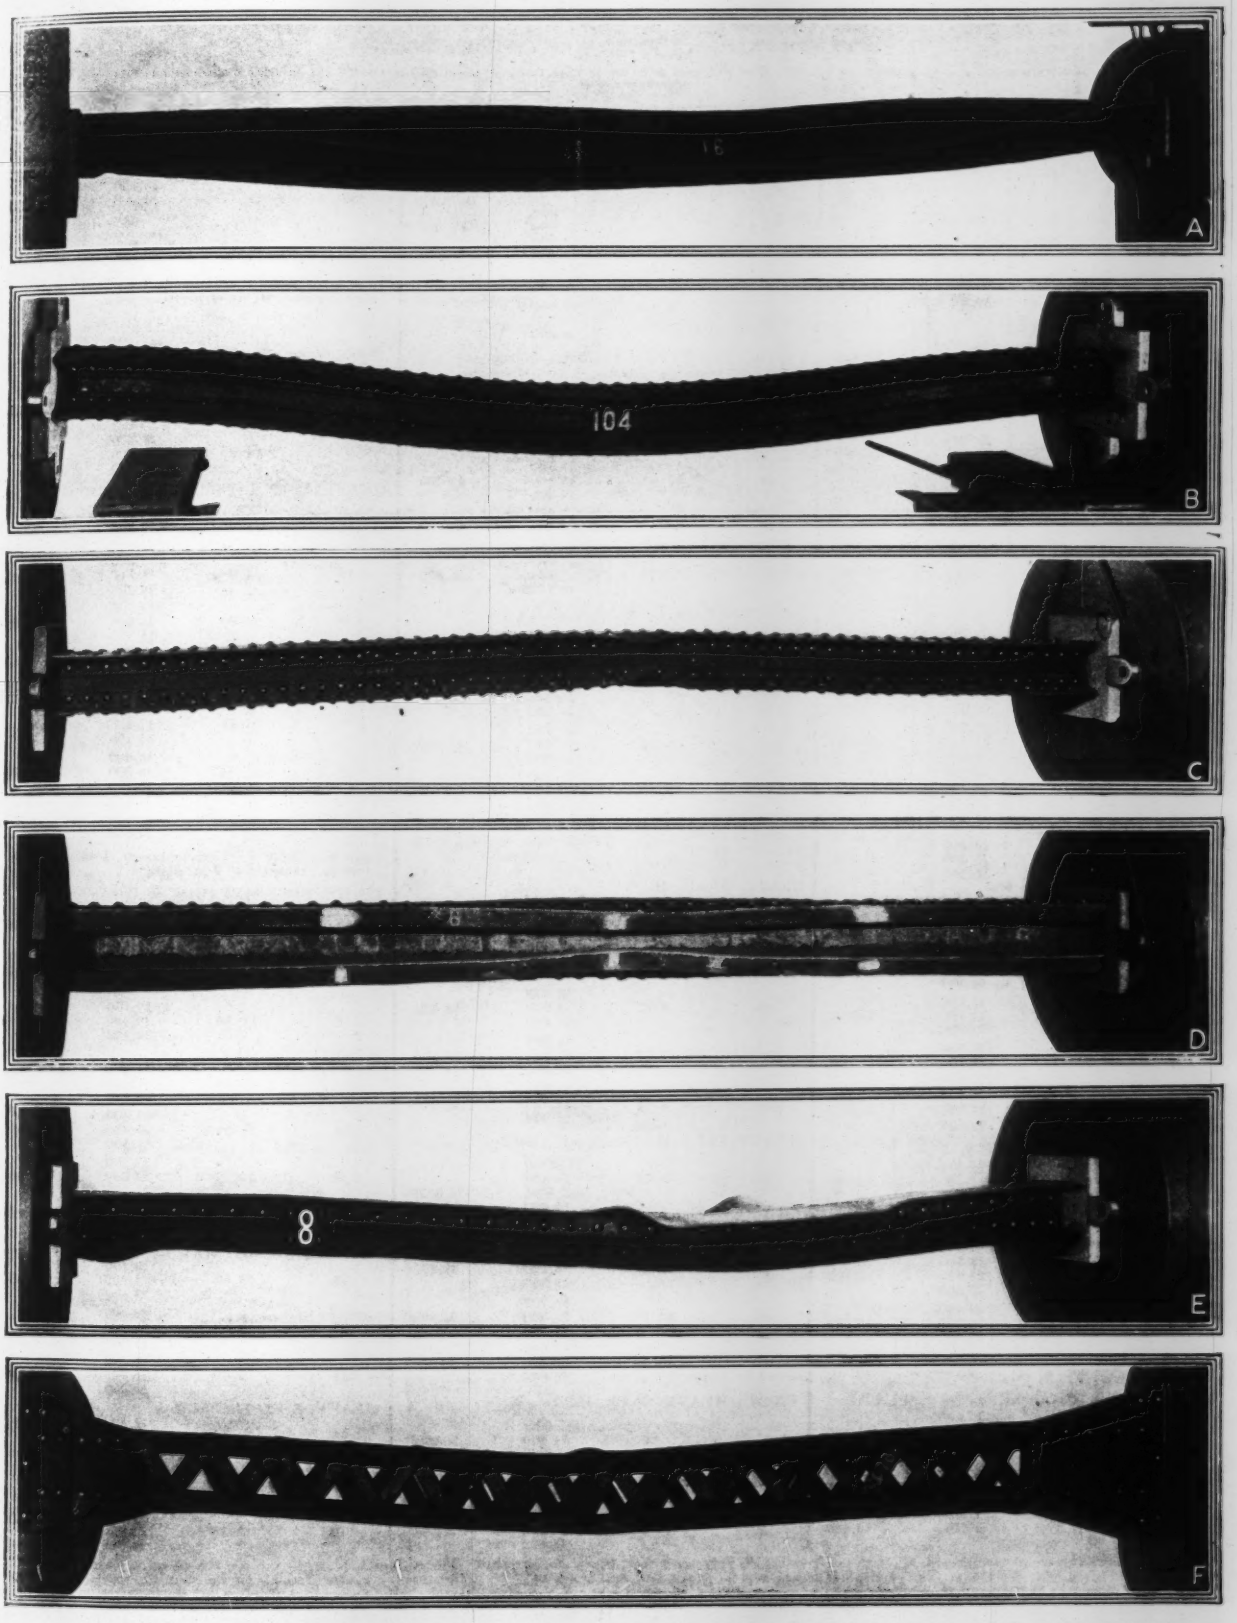


FIG. 1. SIX VIEWS SHOWING THE MANNER OF FAILURE AFTER EXCESS DEFORMATION IN THE MACHINE

* Test values for slenderness-ratio 20 (or pin-end value 10) represent short-block compression. The ultimate strengths include the effect of plastic squeezing in the heavy and extra-heavy sections. The yield-point values are, therefore, added in brackets [ ]; they are the values of basal column strength, for comparison with the ultimate strengths of the longer columns.

† No explanation for this abnormal figure was discoverable.

†† The light Z-bar columns failed by twisting (A in Fig. 4), but a strength-reducing effect of this action is not detectable in the results.

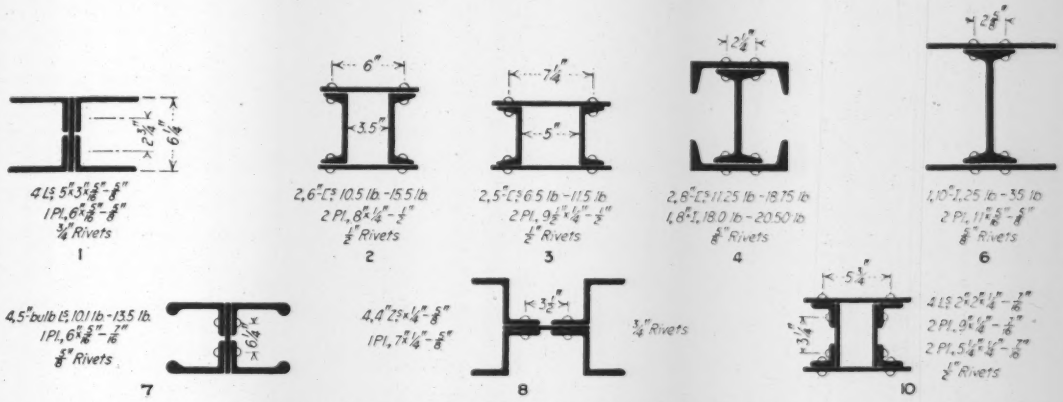

FIG. 2. TESTS OF SOLID-SECTION COLUMNS SHOWED NO INFLUENCE OF SHAPE OF SECTION. TESTED IN LENGTHS OF 50 TO 120 R, WITH SPECIAL TESTS AT LENGTHS 20 AND 155 R

TABLE II. TESTS OF 8-IN. CHANNEL COLUMNS, LATTICED AND TIE-PLATED IN VARIOUS WAYS; 42 TESTS

Made in Co-operation with a Committee of the American Railway Engineering Association

NOTE—The slenderness-ratios in the tables are abnormal, being computed as pin-end values, while the tests were made with truly squared ends. Divide the tabular slenderness-ratios by 2 to get the pin-end values.

All light columns, 2 channels 8 in. by 16½ lb. per ft.

* The tie-plate spacing represents pin-end slenderness-ratios exceeding those of the entire column by 50 to 100%. In the strongest of these tests, 26,900 for pin-end ratio of 42½, the tie-plate spacing gives a ratio in the individual channel of 65. In the lowest, 15,100, the column has pin-end ratio 60, while the channel ratio is 120.

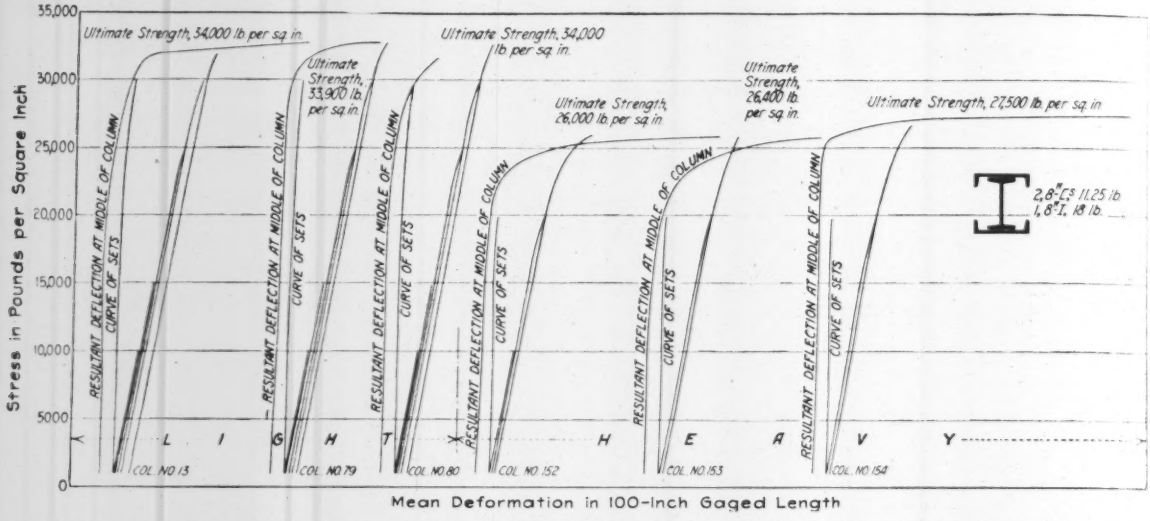

FIG. 1. TYPICAL TEST-CURVES OF SOLID COLUMNS SHOW EXCELLENT ELASTIC QUALITIES, WITH YIELD-POINT CLOSE TO ULTIMATE

of the column core, it would produce rotation like that actually observed.

The remarkable fact is that all the light-section Z-bar columns, without exception, failed by twisting after passing the ultimate strength, while all the heavy-section Z-bar columns buckled bodily by flexure without twist.

While rotary or torsional buckling is not treated in the theoretical discussions of column behavior, it has been observed before the present series of tests. J. E. Howard, for many years testing engineer at the Watertown Arsenal, found this kind of failure in a set of Z-bar columns tested in 1891 for the Carnegie Steel Co. (This is stated by Mr. Howard; the Carnegie Steel Co. has no record of such tests, although its drawing files indicate that 22 Z-bar columns were made early in 1891 for testing.)

Failure of outstanding flanges was made apparent in a number of the channel columns, and in a few of the plate-and-angle I-section columns, by the excess straining subsequent to maximum load. The views *C, D, E* of Fig. 1 show instances of localized buckling. How much influence this had on the strength of the columns is not known, as no local failure was observed until long after passing the ultimate strength. The tables of results indicate, however, that such influence was negligible.

The bodily buckling and the absence of local weakness demonstrated that the columns secured the full efficiency

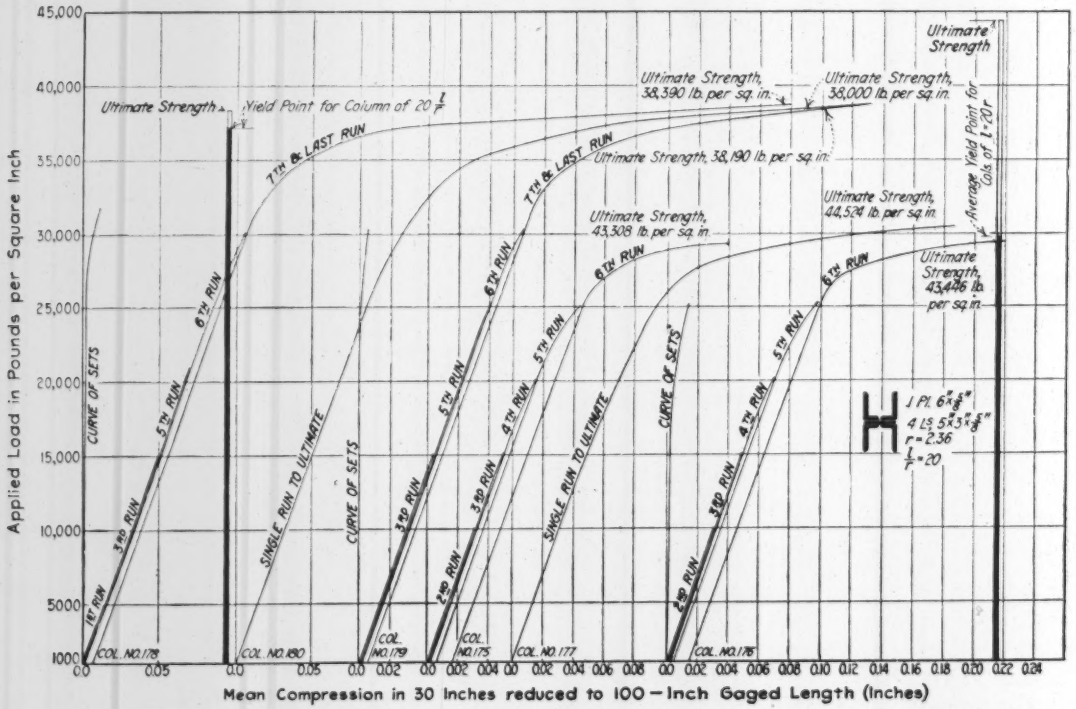

FIG. 5. IN SHORT-BLOCK TESTS, LIGHT AND HEAVY SECTIONS SHOW SIMILAR ELASTIC BEHAVIOR, BUT HEAVY COLUMNS SQUEEZE WITHOUT BUCKLING AFTER YIELD-POINT IS PASSED

of the metal in the columns. Nevertheless, large differences of ultimate strength were found between similar columns. In nearly all cases two columns of similar make-up but of different thicknesses of metal, that is one column of thin and the other of thick metal, showed decidedly lower strength for the columns of thicker material.

No reason for this difference can be discovered in the mill tension tests of small specimens, as all these fall fairly well within the ordered yield-point range, 37,000 to 39,000 lb. per sq.in. Compression tests in progress on entire sections of channels, I-beams and other shapes, some of which have already been completed, show that the compressive strength of the metal in different columns is not at all the same. Some of the metal has an average compressive yield-point well below 30,000 lb. per sq.in., other pieces as high as 42,000. In addition, the short-block tests—i.e. those made on columns of total length equal to 20 r, or pin-end length-ratio 10—exhibit directly the compressive quality of the metal and plainly show the variations in compressive yield-point.

It has long been known that the strength of a column is limited by the compressive yield-point of the material; the present tests, so far as they apply to this point, are wholly confirmatory. Since the tests show that different lots of steel ordered to the same tensile strength and tensile yield-point may have widely different compressive yield-points, they demonstrate that steel columns supposedly alike may differ in strength by 25% or more. How this unsatisfactory condition may be cured and how metal of high compressive quality is to be obtained from steel mills under regular commercial conditions is a matter for early consideration.

Summary of Important Results

The value of the tests is pretty fully embodied in the two extensive tables of ultimate strengths which we have compiled from the Bureau's test sheets. Reading these tables in conjunction with the column drawings, Figs. 2 and 3, various facts become apparent. We give in the following those that appear to have the chief practical importance:

Columns whose component elements are connected by tie-plates are much weaker than those in which proper latticing is used. Tie-plate connection should not be used, therefore.

Well-built latticed columns and columns of solid cross-section can readily be made free of all local weakness, so that they will fail by integral buckling.

When a column fails by integral buckling, the limiting factor of strength is the compressive yield-point of its metal. The higher the compressive yield-point of the metal, the stronger will be the column.

Columns whose length-ratio is 25 or less (pin-end basis) have an ultimate strength equal to or just below the yield-point of the metal. For greater length there is a progressive decrease in strength, fairly well expressed by any of the ordinary column formulas. Even up to length-ratio 72½ the influence of the yield-point of the metal is still distinct, that is, the conditions expressed by the Euler formula are not nearly approached.

A good column shows a straight stress-strain curve (Fig. 6), which bends quite sharply to failure. Thus, practically the entire ultimate strength of the column is to be regarded as "available strength" for purposes of design. For a given working stress, therefore, the factors of safety possessed by two columns will be in the same ratio as their failure-strength in test.

The columns of ¼-in. to ⅜-in. material show considerably lower strength in most cases than those of ⅜-in. material. The reason for the lower strength lies in the lower compressive qualities of the thick rolled material.

Specifying the tensile strength and tensile yield-point will not fix or guarantee the compressive yield-point, even though a rather high tensile yield-point be called for.

Attempts To Eliminate Dangerous Railroad Crossings

California Commission Recommends 1100 Improvements To Lessen Fatalities and Injuries to Users of Highways

IN CALIFORNIA the state railroad commission has exclusive jurisdiction over all grade crossings of highways and railways. Between June 30, 1914, and Dec. 31, 1916, there were 229 persons killed and 896 injured at these crossings, largely through the carelessness of the persons driving on the highways. The commission is now making an examination of every such crossing in the state. If possible, each crossing is examined in the presence of the railroad company's representatives and the local highway authorities who are interested in it. The commission makes a report on each crossing, sometimes giving recommendations for improving the existing conditions. The recommendations are usually confined to improvements that do not involve the separation of the grades of the highway and railway, for such elimination of grade crossings is too expensive where the hazard is slight.

The recommendation made most often is to place, change or remove signs at these crossings; the recommendation coming next in frequency is to cut down brush or trees or to trim trees that interfere with the view of the tracks from the roads. Out of 1100 recommendations for the improvement of grade crossings, 768 were of one or the other of these two classes. In 92 cases the commission advised closing the crossing, because to do so would cause little inconvenience and greatly reduce the dangerous conditions. In 66 cases the installation of automatic flagmen or bells that give warning of the proximity of the train to the crossing was recommended.

No Warning Signal Is Certain

Like all warning signals, however, none of these are a certain check to the careless driver, and for this reason some road builders believe in reviving the "bump" used a number of years ago to stop reckless speeding. This is merely a transverse ridge, which a car moving at a moderate speed will pass over without other results than a slight jar; a car moving at high speed, however, will receive such a jolt that the driver will be cautioned of danger. These "bumps" it is proposed to place near the warning signal, so that every car will be brought under control before the crossing is reached, provided the driver is careful and intelligent.

In 30 cases the commission recommended the removal of billboards, buildings and other obstructions to a view

of the tracks. An unnecessary hardship to the large number of careful drivers results from the presence of such obstacles to the oversight of tracks leading to the crossing.

If the billboards served any public purpose, there might be some excuse for locating them in such places. The buildings often belong to the railway company, which has a tendency to place tool sheds, store sheds and other small structures near the tracks at crossings where they cause the traffic on the highways the maximum inconvenience. It is strange that this is so, in view of the fact that every grade-crossing accident costs the railway on which it occurs a sum that would remove many of these sheds to more suitable positions.

In 27 cases the commission recommended that the highway approaches to the crossing should be graded, in four cases it advised changing the alignment of the highway, in 14 cases it advised grading between rails, and in one case it advised changing the location of the crossing. In only 18 out of the 1100 cases did it recommend the separation of the grades of the highway and railway. This last fact is significant of the change in public sentiment regarding grade crossings in the last 15 years. At one time there was a quite general demand that grade crossings should be removed at the expense of the railroad companies everywhere, without regard to the fact that probably no railroad company could do so without going into bankruptcy. That only 18 out of 1100 grade crossings are now considered to require a separation of grades indicates a more complete understanding of the real causes of danger at such places and of the means of reducing it to a negligible minimum.

Canadian Cantonments All Built by One Contractor

Organization Developed During Three Years of Rush Work Completes Camps in Short Order

ALL OF the military camps built in Canada in the past three years have been the work of one contractor, Bate & McMahon, of Ottawa, and have been put up under the direction of Col. Robert S. Low, manager of the firm, who was early in the war commissioned a colonel to facilitate the military control of the construction. While none of the camps has as many buildings as are designed for the new United States cantonments, two of the Canadian camps, Borden and Valcartier, have housed as many or more men under canvas and have required equally elaborate and extensive sanitary services and auxiliary buildings. Most of the other work in Canada has been the construction of aviation camps to quarter from 1200 to 1500 men and a great amount of aviation equipment. All the camps were rush jobs, and from the beginning Colonel Low has specialized on speed, so that today he has under his charge a unique organization of remarkable experience in hurry-up work.

An important and distinctive feature of the organization is its mobility. From the early days of the war, when Colonel Low caught his workmen early in the morning of Aug. 5, 1914, on their way to another job and dispatched them immediately by train to the site of the Valcartier camp at Quebec, the complete organization, men, equipment, and food, has been on call for dispatch to one after another of the camps which have been ordered by the military direction.

The second important factor in the speed is that the whole organization is self-contained. The full layout of contractor's equipment, comprising motor trucks for delivery, the usual quota of steam shovels, ditchers, backfillers, concrete mixers, derricks, engines, and minor tools have been so selected that they can be loaded onto a train and sent wherever required. Attached to this same train or to others closely following it are the cars carrying the men and provisions sufficient to last three weeks, so that on whatever site they are started, work can be carried on for that length of time before call upon local stores or upon local delivery must be made.

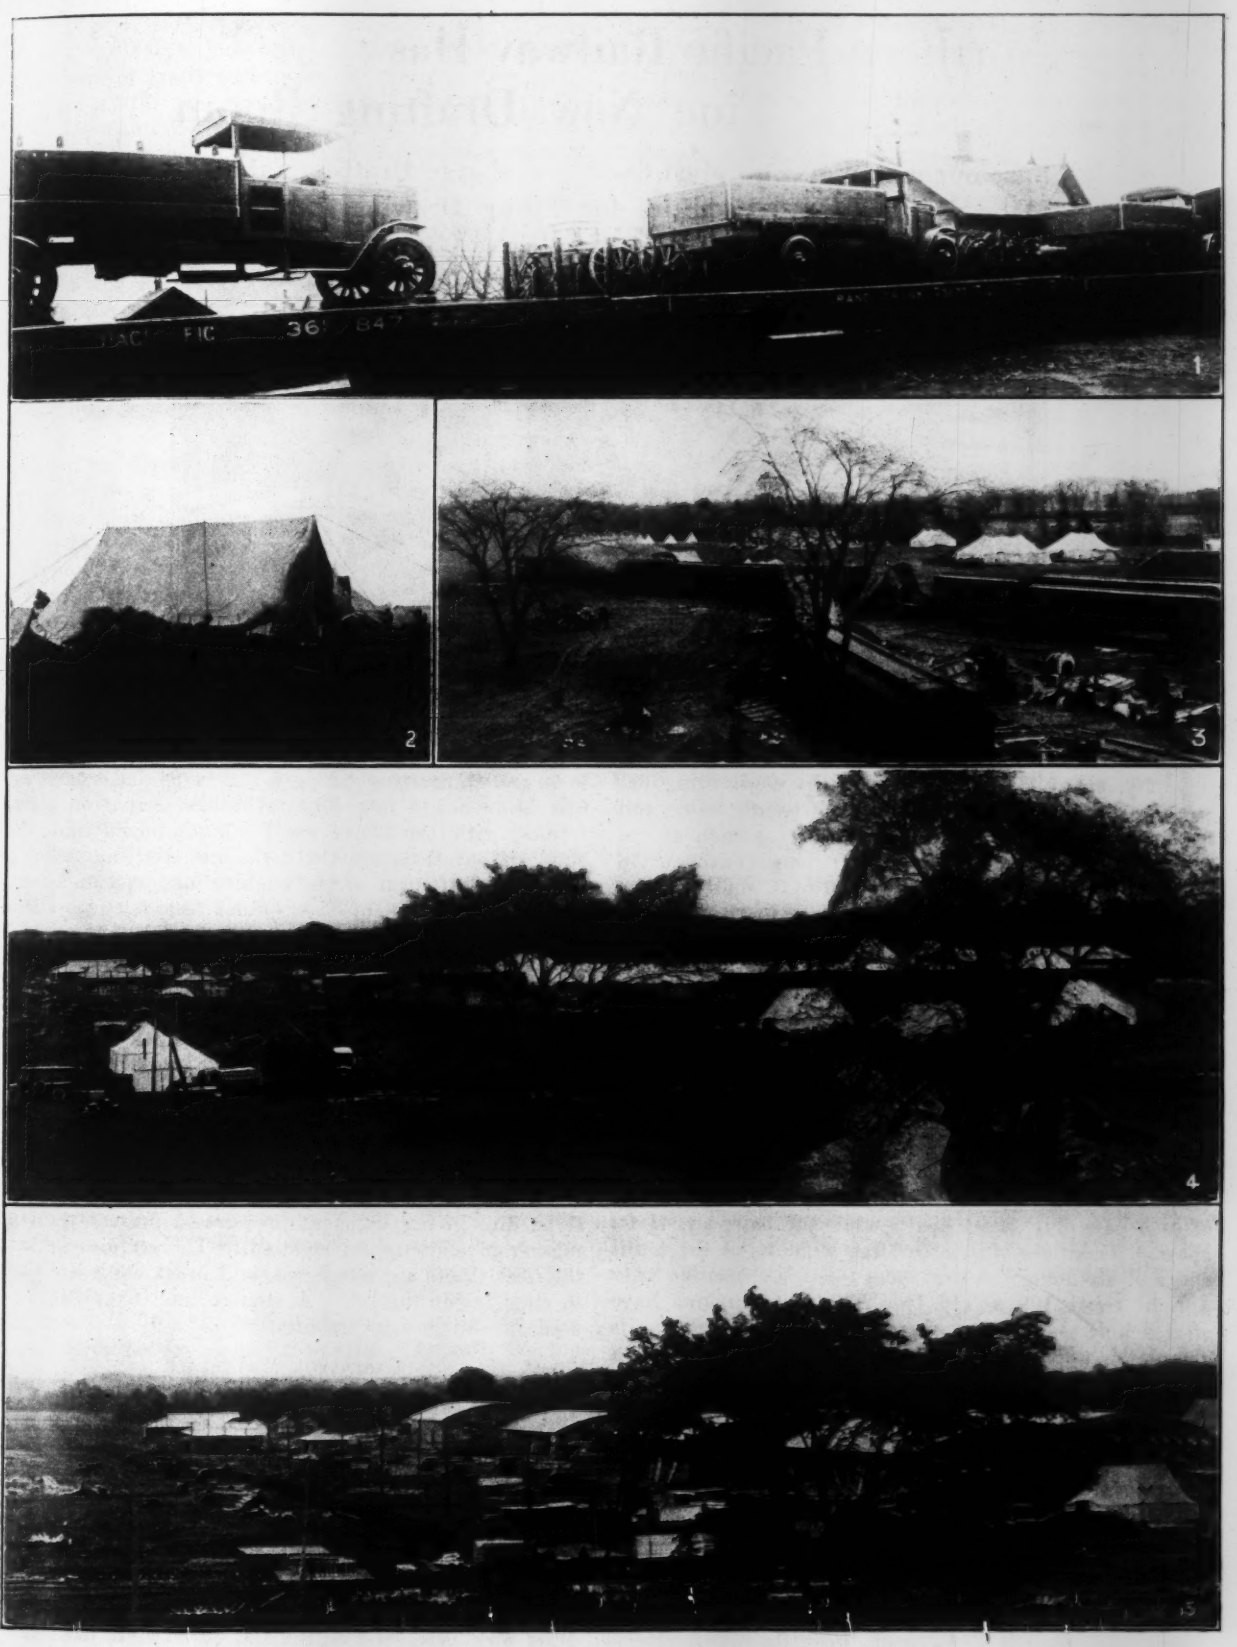
Equipment Loaded on Cars

Some of the accompanying views show typical camp work. The first one shows some of the cars loaded with the contractor's equipment. These cars are brought as near as possible to the camp site and tracks are then immediately laid to the site proper. When the site has been reached, old-fashioned circus methods soon run up a tent camp, a typical one of which is shown in another of the views. In this camp 1000 to 3000 workmen are housed. Immediately wells are sunk, telegraph, telephone, and where possible, power connections established, and the preliminary clearing started. Portable sawmills follow behind the timber operations and soon transform the trees into lumber used in the camp construction. Trench diggers follow the clearing for draining the ground where necessary, and in all cases for making the trenches in which the sewer and water pipes are laid. Material, that is cement and aggregate for concrete floors and cement-gun covered walls where such are used, floor frames, sashes, sanitary fixtures, etc., all follow as soon as possible by train. Then building operations are begun.

Rapid Progress Made at Camp Leaside

Three of the views here show the rapid progress made on the most recent of the aviation camps, that known as Camp Leaside, in Toronto. The contractors did not reach this site until May 23 of this year. The first view shows them late in the afternoon of the first day they entered, and the trains carrying their men and equipment in the foreground and the tents for the construction force already in place. The other two views show the progress at the end of one week and at the end of three weeks. The work here comprised not only considerable clearing of rough timber but the drainage of the aviation field, the erection of houses for quartering the men, and the construction of a number of large-size hangars, together with the necessary roads and wiring connections. Most of the buildings of this type are of wood frame, sheathed on the side with 2-ply roofing, and on the roof with 3-ply.

All of this work is done under the general direction of the military organization of Canada. The design details are, however, left mostly to the contractor. He is told how many men are to be housed in the camp and given specific instructions, of course, as to the number and general design of the many buildings. His own design force then proceeds to the work under the general direction of a military officer. Contracts are let on a cost plus fixed sum basis, the government keeping the only time that is used on the work and the government also checking the contractor on his bill of material.



RUSH WORK IN BUILDING AN AVIATION CAMP, CAMP SEASIDE, ONTARIO

1—Construction equipment loaded on train to ship to camp. 2—Canvasmen putting up the workmen's tents. 3—The camp site at the end of the first day on the job, May 23. 4—Railway sidings in, material dumped and some buildings started one week later, June 1. 5—Hangars well along and quarters nearly complete. Three weeks after reaching camp, June 15

Northern Pacific Railway Has Fine New Drafting Room

Spacious and Well-Equipped Quarters—Large Drafting Tables—Metal Filing Cases—Facilities for Filing Drawings and Books

THE new office building of the Northern Pacific Ry. at St. Paul, Minn., has the engineering department on the twelfth and thirteenth floors, and the main drafting room occupies a large portion of the former. It is approximately 117 ft. long and 35 to 58 ft. wide, with an area of nearly 6200 sq.ft. undivided by partitions or interior walls. The height is 11 ft. This room will accommodate 60 to 75 draftsmen and is used by the forces engaged in maintenance, valuation, bridge, map and general work. Separate quarters are provided for the drafting work of the architectural and signal departments. The general layout of the engineering quarters and drafting rooms on the twelfth floor is shown in the plan on p. 650.

Ample Light

Ample light is provided by seven pairs of windows along the east side. The windows are 62 x 89 in., those of each pair only 14 in. apart, while the pairs are 4½ ft. apart. There are also three large windows at the north end and six along the west side, these last opening onto a light court 109 x 146 ft. The east windows have steel double sashes so connected that as the lower one is raised the upper one is lowered. Each window has a "Perennia" folding cloth shade of light buff color. It slides on vertical wires and may be adjusted to cover any desired width at any height, or it may be folded up at the top or bottom of the window. There are 76 lamps of 100 watts each, suspended from the ceiling and concealed by bottom bowl reflectors in order to give indirect, or diffused, lighting.

The record engineer, with his clerical force, occupies a space about 22 x 42 ft., shut off from the main part of the room by the large steel filing cases required for his voluminous records. An open steel stairway connects this space with the thirteenth floor, which is occupied by the valuation engineer and his force.

Ranged along the outer (east) wall and at right angles to it are 31 drafting tables, all 42 x 84 in., except one that is 58 x 144 in. The tables are boards on trestle frames, with small drawers for instruments and supplies. Near them are the desks and drafting tables of the chief draftsmen of the engineering department and the bridge department. A special feature is an Ulrich shadowless, or transparent, drafting table 3½ x 7½ ft. It has a ground-glass top over a chamber containing electric lights and is used particularly for tracing old and faded drawings and maps. It was built especially by the Wausau Fixture and Furniture Company.

The inner part of the room has several filing cases, mostly of steel. These cases have drawers and shelves, the shelf space being either open or fitted with doors. Bridge plans are filed vertically in two steel cases mounted on wheels and having hinged tops or lids. The tracings are placed between fiber sheets arranged in "accordion" style, thus giving sufficient pressure to prevent the tracings from slipping or buckling. The sections between the fiber sheets are numbered, and index cards are fitted to clips inside the lid. A similar case, 62 x 31 in., is used for filing map tracings.

Cases for Materials

A metal case, 3½ x 7 ft., and 40 in. high, with doors, has compartments for storing opened rolls of tracing cloth, profile and detail paper, cross-section paper (in sheets and rolls) and stationery supplies. Beneath the top is a recess having an iron rod, in brackets, carrying the roll of detail paper that is in use. A wood case, 28 x 30 in., 4 ft. high, with locked doors, is provided for keeping pencils, pens, erasers, brushes, inks, water colors, etc. Upon it is mounted a Boston pencil pointer. Another wood case, 50 x 30 in., and 40 in. high, has shallow drawers for stationery and other supplies. A general-utility table, 4 x 15 ft., has drawers of various sizes for

the storage of such supplies as unopened rolls of paper and tracing cloth, jars of paste, large bottles of ink, safety gasoline cans and waste, for cleaning tracings.

Printing titles on tracings of maps and profiles (mainly for the valuation engineer) is done by a No. 9 "Official" printing press, which, with a type case containing 16 fonts of different sizes of type, is mounted on the general-utility table. The press is also used for printing small blank forms. For the tracings, ordinary printers' ink is used. While this practice necessitates allowing time for the ink to dry, it is found that quick-drying inks do not penetrate and therefore gradually rub off, so that good blueprints cannot be made.

Two Sets of Railway Curves

Two sets of Stowell Bros. metallic railway curves are kept in the top drawer of one of the cases, being ranged in order by degree or curve, with labels pasted on the bottom of the drawer. Holes in the curves allow placing them over upright brads that are driven into the bottom of the drawer and thus hold the sets of curves in place. This method of keeping the curves was adopted for the reason that driving nails in the walls is prohibited throughout the building. Where pictures, maps, clocks, time cards, etc., are required, they must be suspended from hooks on the picture molding. The draftsmen have their own instruments, which with T-squares, triangles, etc., are kept on the tables or in small drawers beneath them.

Several white porcelain washbowls are provided, each having hot- and cold-water taps and a third tap for cooled drinking water. There is also a large inclosed sink that can be used by the draftsmen for washing glasses, bottles and other articles. All waste-baskets are of noninflammable fiber. For coats and hats there is a portable rack at one side of the room. The railway company provides individual drinking glasses and supplies each man with two towels per week.

Blueprinting Equipment

The blueprinting room, 24 x 37½ ft., is on the thirteenth floor (top). It is equipped with a Pease automatic electric machine, with its washing and drying apparatus. The finished prints are automatically wound up in a loose roll. This machine takes paper 54 in. wide. For trimming prints there is a 45-in. shear, having a graduated platform 3 x 4 ft. There are also four tables, two of which are large trimming tables, 5 x 12 ft. and 3½ x 10 ft., with 2½-in. wood tops and iron-pipe legs.

A case 3 x 16½ ft., behind the machine, serves as a general table for laying out the work. Beneath the top are open and closed compartments for storing blueprint paper and the tracings that are in use. With this equipment, an operator and two assistants do all the work for the engineering, mechanical and right-of-way departments. During the year 1916 about 854,000 sq.ft. of blueprint paper was used, besides large quantities of white and negative papers. Comparatively little use is made of white prints, owing to the extra time and cost of making the negatives.

Vault and Filing Equipment

For the storage of drawings and records, there is a fireproof vault 24 x 37½ ft., 11 ft. high, on the drafting-room floor. It has the unusual feature of being lighted by a large window. This is on the court side (the only exterior wall) and has metal sash frames with wire-glass panels. There are also 12 ceiling lamps of 60 watts. For drawings, there are four filing cases with pigeonholes above and drawers below. Five cases with shelves only are provided for fieldbooks and similar records. All these cases, with a table, are of steel, the only wood equipment being a wheeled step-ladder. The steel filing equipment in the vault and drafting room is of the Art Metal Co.'s manufacture.

One of the filing cases for drawings occupies an entire wall of the vault, being 37½ ft. long and 11 ft. high with a depth of 31 in. The upper part has 374 pigeonholes or compartments, 7¼ in. high and 12¾ in. wide, while the lower part has several tiers of drawers. A double-faced case, 15 ft. wide, 11 ft. high, and 11½ in. deep on each side, has 460 pigeonholes 4⅜ x 12¼ in., used mainly for rolls of profiles. Beneath are 16 drawers 9 in. deep, 14 x 22½in. They are for various groups of sketch plans and track-mileage records. This case also has metal boxes in which are filed track profiles (1 in. = 400 ft.), condensed profiles and rail charts. The fourth case is 8 ft. 9 in. wide, 10 ft. high and 35 in. deep, used mainly for station plans and maps.

For the fieldbooks, there are four double-faced cases 10 ft. long, 11 ft. high and 12 in. deep, and one case only 6 in. deep. These cases already contain over 15,000 fieldbooks, dating from 1864, and have room for many thousands more. The books have numbered labels pasted on the back.

Diagram of Filing Layout

A diagram of the layout is placed in the vault to facilitate the location of required compartments or drawers, but the taking out and replacing of files are supposed to be done generally by the filing clerk or his assistant. On the inside of the vault door, and therefore conspicuous when the door is open, is a clip board with a renewable white-print sheet for recording files taken from the vault. This sheet is ruled in columns for files of seven different classes—plans, maps, fieldbooks, etc.

When a file is taken out, its number is marked in the proper column; and in another column is entered the name of the person who takes the file or to whom it is given. The entries are canceled when the files are returned. This method places responsibility and often saves time and trouble in searching for missing files.

Filing and Indexing System

The filing clerk and one assistant care for all the drawings, fieldbooks, etc., filed in the vault. These clerks have a space about 22 x 15 ft. in the drafting room, equipped with tables. The main file is a "Globe" card-index cabinet with cards 5 x 8 in. The cards are of five colors: White for maps, pink for profiles, buff for structures, blue for bridges, and green for statements and statistical tables. They are filled out on a typewriter. There are also individual index books for special classes of records, such as stations, etc.

Bridge, building and other structural plans are filed flat in shallow drawers of suitable size. Each drawer has a fixed cover at the rear to keep plans from slipping out, and a hinged flap at the front to rest on the

plans and hold them in place, so that they will not be damaged in pulling the drawers in and out.

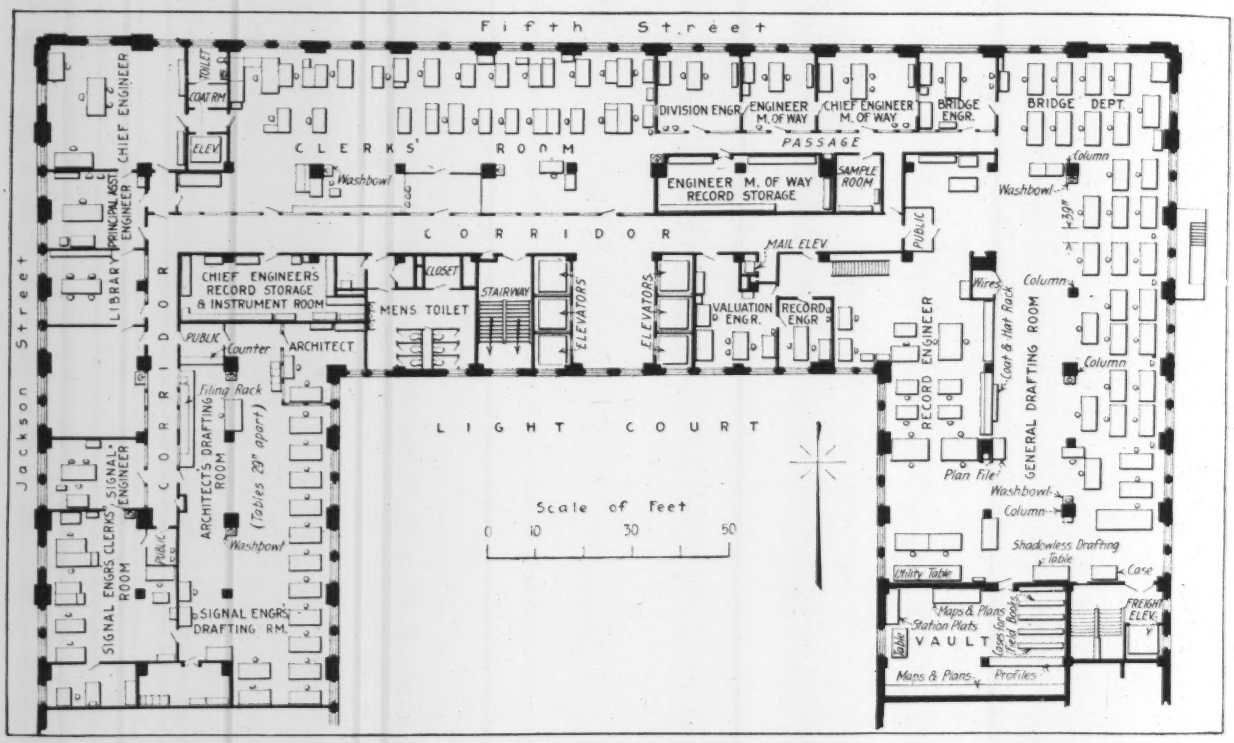
Station and other plans, and maps of all kinds, are rolled on strong cardboard tubes and kept in large pigeonholes or compartments. The tubes are 1¼ in. in diameter, with closed ends, and each has attached to it a paper flap that rolls up with the tracing or drawing. A rubber band is placed over each roll. The tubes are of three lengths: 30 in., 34 in. and 42 in. Those in any one file case are the same length, which is a little less than the depth of the case.

On the fixed cap at each end of the tube is a white disk with red border and horizontal red line. In the upper part is printed (by hand) the number of the compartment. In the lower part is the individual file number, each compartment having its own series of numbers up to its cubical capacity. Thus, after looking up the card index, it is a matter of a few moments to locate the compartment and then to find the roll of the desired number in that compartment.

With this arrangement it is not necessary to label the compartments. The drawers, however, have labels of white cardboard in bronze frame plates. Drawers containing files not referred to in the card index have brief inscriptions to indicate the contents. All files have printed across the end the number of the drawer or compartment and the individual number.

An exception to the above arrangement is made in the filing of station plans, in order to retain a system adopted several years ago and to avoid the trouble of converting all these old file numbers. In this case each vertical row of compartments has a letter and each compartment of that row has a number: A-1 (at the top), A-2, B-1, etc. Each tube is marked with the letter and number of its compartment and also with the name of the station or spur represented on the plan. These plans, on a scale of 100 ft. to the inch, are filed by sections of the main line and by branches, without alphabetical arrangement.

The plans of a large station layout may be in two to four parts, rolled on one tube. For the large terminal stations, such as St. Paul, Seattle, etc., with six to thirty sections, there is a separate tube for each section. To locate the sections, there is a blueprint index map for each of these terminals, rolled on a tube having a pink label marked Index and filed in the same compartment. Rail charts are being made for each station, showing the location and length of rails of various weights. These



PLAN OF ENGINEERING DEPARTMENT AND DRAFTING ROOMS IN THE OFFICE BUILDING OF THE NORTHERN PACIFIC RY., AT ST. PAUL, MINN.

charts are rolled on the same tubes as the station plans, a blue line being marked across the label, at right angles to the red line, to indicate stations having the rail charts.

The filing case for station plans is 8 ft. 9 in. wide, 10 ft. high and 35 in. deep. It has 99 pigeonholes 6 in. high and 10 in. wide, also large and small drawers 3½ in. deep. In one of the large drawers are kept, on labeled tubes, maps 22 x 36 in., on a scale of 1 in. = 4 miles, covering the entire Northern Pacific Ry. and its connections. There are also separate sheets (on a larger scale) of plans of the more important towns. As there are 50 of these sheets, each tube carries two sheets, the cap labels showing the number of the sheet for the general plan, or the name of the town for the detail plan. Other drawers contain state, county and city atlases.

In drawers 14 x 22½ in., and 9 in. deep, are filed vertically the "A.F.E." (authority for expenditure) sketches. They are tracings 8 in. wide and of necessary length, showing proposed changes or improvements. Blue-

prints of these sketches are used in various ways. Letter-filing cases in one of the compartments contain sheets, 8½ x 12⅜ in., of sketches and plans of grade crossings, etc.

All work passes through the hands of the chief draftsman of the engineering department, except that matters relating to bridges and culverts are attended to by the chief draftsman of the bridge department. The work under the former includes not only the preparation of plans, maps and drawings for new work and improvements, but also the keeping up of road charts (for rails, ballast, etc.), progress profiles and records received from the record engineer, who has his quarters and files in the drafting room. It covers also the map and work for the valuation now being done for the Interstate Commerce Commission, eight of the draftsmen being at present assigned to this work. It may be noted that the conventional signs recommended by the American Railway Engineering Association in its *Manual* are used on all new plans.

The heads of the drafting office and record work are J. N. Pariseau, chief draftsman of the engineering department; R. R. Brockway, chief draftsman of the bridge department; and H. M. Stout, record engineer. All —work is under the direction of H. E. Stevens, chief engineer of the Northern Pacific Railway.

Labor Conditions and How Contractors See Them

Shortage of Supply and Shifting of Men from Place to Place Constitute Difficult Problem and Chief Cause of Decreasing Efficiency

THE contractor or the construction engineer with work to be done and a time limit or penalty looming in the distance is sure to find increasing trouble in regard to the supply of men, judging from opinions expressed to this journal by leaders in the railway and construction fields. The labor problem was discussed briefly in *Engineering News-Record* of Apr. 26, and information was given in detail as to the experience on one large railway job. A rather wide inquiry made since that date, as to opinions and experience, indicates that the condition is recognized as increasingly serious. This is due not only to the actual shortage of supply, but to the great loss of time, money and energy consequent upon the unreliable character of a large proportion of the common-labor element.

Foreign Labor Travels in Gangs

Foreigners are still fairly plentiful. They are handled usually in gangs headed by interpreters, especially in the case of men from the countries of southern Europe. While the men usually stick together in their gangs, it is uncertain how long a gang will stay on the job, even after it has started to work, since for any grievance or any advantage elsewhere the interpreter is apt to take the gang away at short notice. Some railways, however, have found that foreign laborers in general are not inclined to shift; and if treated well one season, they are likely to return.

One method of checking the tendency of these gangs to float from job to job on railway work is for the railway to decline to employ men coming from other roads in the same vicinity. Otherwise, the leaders of the gangs are inclined to play one road against another. They will tell the officials on the road for which they are working that they have been offered higher pay by another road and will tell the officials of the latter that they will come to work for a certain rate of pay. It is usually desirable, or even necessary, to keep the various nationalities and the various grades of labor separate, both in camp and on the work. This is particularly the case at the present time, with war and racial feelings aroused.

With laborers, native and foreign, who work singly and not in gangs, one great trouble is their uncontrollable restlessness. This results not only in making the problem of labor supply continuous, but in making it difficult to organize gangs for work or to keep men who understand the work. On some Chicago track-elevation work done by a railway company, almost 2870 men were employed during a period of six months to maintain a working force of about 400. The average time spent on the work was less than five days for each man. On a 10-mile highway contract, over 5000 men are said to have been employed during the working season of 1916. Drink is of course one of the main causes of restlessness and trouble, but sheer restlessness in itself is a strong factor in the problem.

Many Men Never Even Reach the Job

Another source of trouble is that a considerable percentage of men shipped by employment agencies do not even reach the job, and of those who do reach it only a certain proportion actually go to work. As a means of checking the wandering tendencies of the men it has been suggested that local communities and their officials should coöperate with the railways to prevent men from beating their way on freight trains. This is a large subject that has been discussed for years, but it seems almost impossible to secure the coöperation of local bodies for this purpose.

The Southern railways have had an ample supply of negro labor along their lines, but are now facing a marked change in this condition, due to the extensive movement of negroes to northern sections, as a result of the great inducements offered for work in industrial plants. The railways are trying to meet this situation by increasing the wages, paying the men more frequently and furnishing boarding-camp and boarding-car outfits. In the Southwest, where Mexican labor has been largely employed, the troubles on the border have led to a decrease in the quantity and reliability of this class of labor. In the Northwest, the Japanese labor is fairly plentiful on the railways.

With the common laborers employed singly, as distinguished from those employed in gangs, some distinction should be made between the "hobo" and the "tramp," though the dividing line is not sharp. The hobo is a good worker, but peculiar in his ways. He does not seem to care for regular employment, but after working long

enough to earn some money he wants to have an opportunity to spend it and then moves on to another job. He is likely to have intelligence, but is not endowed with staying capacity. The majority of hobos are Americans, or men from northern Europe who have been in this country long enough to know its ways. They get their jobs largely through labor agencies.

The Tramp Does Not Want Work

The tramp proper does not want to work, even to earn something to spend. He prefers to get his money in some easier way and takes a job only in emergency and with no intention of sticking to it. He is less cleanly and less reliable than the hobo and usually drifts into the work casually instead of being sent by a labor agent. One contracting firm states that on a job in Ohio its common laborers were mainly "American bums, who were either drunkards or petty criminals."

One peculiarity of the situation is the difference in living accommodations required by men of different nationalities. As an instance, B. M. Cheney, general inspector of permanent way and structures on the Chicago, Burlington & Quincy R.R., states that most foreign labor prefers wooden bunks, while the hobo, negro and Mexican prefer steel bunks. But this is not all; different nationalities have their own preferences in bunks, and the Greek is not satisfied with the kind of bunk built by the Italian. For this reason, in furnishing cars for foreign laborers this road supplies the lumber and lets the men build the bunks in accordance with their own ideas.

What Contractors Say

Inquiry as to individual experience and practice brings out interesting information, some of which is condensed below:

Morris, Shepard & Dougherty, of St. Paul, emphasize the fact that the time of service given by common labor for the last couple of years has been very unsteady. Outside of the employees who have been working more or less steadily among subcontractors, laborers do not remain much over a month before they move on to some other job. There is no special reason why they should quit, except their restless condition.

The nationalities employed in this section are largely Swedes and Norwegians. Previous to the opening of the war, there were some Austrians and Italians, but very few of these are to be had at the present time. The contractors in this section have been endeavoring to improve the housing and feeding of the men and have increased the wages as an inducement for them to remain on the various jobs, but it seems to have little or no effect.

Laborers Average Less Than a Month on the Job

Winston Brothers Co., of Minneapolis, finds that common laborers average less than a month on the job. They enjoy change and therefore move on, being sure of a job whenever they want one. Hobos of all nationalities are employed. Gangs of Austrians, Hungarians and Slavs stay the longest. Men may be encouraged to stay by a bonus system, with extra pay for a definite period of 60 or 90 days, or to the end of the job.

P. T. Clifford & Son, of Valparaiso, Ind., also find it hard to keep common or transient labor. Good board and sleeping quarters, with prompt and frequent payment, are thought to furnish the best general solution of the problem. This applies also to foreign labor. Italians and Rumanians are being employed, and there is no great difficulty in securing all the men required.

The Dravo Contracting Co., of Pittsburgh, finds that the majority of common laborers in that section render efficient service for four or five days, when they become dominated with the craving for intoxicants. The resulting loss of interest in the work necessitates prompt discharge. The men get drunk, perhaps have a term in jail and then go to work for a few days with some other outfit. The company has sanitary camps and messhouses, with good food and beds, heat, light, running water, modern toilets and shower baths. Every possible means is taken to prevent the use of intoxicants.

With Higher Wages, It Takes Less Time To Get a "Stake"

The Bates & Rogers Construction Co., of Chicago, reports that, in general, the length of service is merely long enough to get a "stake" of $10 or $12. As wages are increased, the length of stay is shorter. The main reason for leaving the jobs is that the men have made money enough to go and "blow it in." The men are largely Italians, Greeks, Rumanians and Austrians.

This firm has tried the bonus system for holding men on jobs. The man is hired with a definite understanding that if he stays a certain period of time, say 60 or 90 days, or until the job is finished, he will be given an increased rate or bonus. This has not given much satisfaction, however. Some good resulted from making the camps as attractive as possible, including good food and good sleeping accommodations. At one of the larger jobs it is proposed to have a Y. M. C. A. outfit, similar to that established with the troops, including a phonograph, moving-picture machine, writing facilities, games, etc.

One Contractor Discusses the Question in Detail

Charles Ffolliott, president of A. Guthrie & Co., contractors and engineers of St. Paul, discusses the situation at length. His opinion follows in his own words:

"The matter of the transient character of common labor is a very interesting one to contractors, and one which has puzzled them for a considerable length of time. It is hard to understand why a man will make a most uncomfortable journey on a railway for two days moving to a job, when he has arrived at his destination stay only for a few hours or a few days and then walk off. It may be said that the men do this just to get transportation to some point to which they want to travel. No doubt this is done in many instances; these men, like many others, have no compunction in beating the railways. Most of the men, however, have no particular place in mind. They just go because they want to move and can move without cost. If they arrive in the evening, they get supper, bed and breakfast, so they figure they are that much ahead and are beating somebody—which seems to them a very proper thing to do.

"The time of service given by the common laborers on any job varies a great deal according to the individual. Among our outfits there are always a few men who stay the entire time of the job. These are men who have worked for us a number of years and can generally be relied on as steady men. But the great proportion of common laborers, especially in harvest time, do not stay longer on an average than four or five days. This refers

mostly to the 'white' men. Where 'foreign' gangs are employed, the term of service is very much longer. In fact, a good 'foreign' gang can be relied on to stay as long as their interpreter does not find a better job for his gang.

"These foreign gangs almost always insist on having their own quarters, boarding cars or camps and buy their own provisions and board themselves, the contractor in most cases paying for the cook. This boarding of the men by themselves tends to unsanitary conditions and to poorer food being used than if the men boarded in a good contractor's camp."

Temptation to Nomadic Habits

In Mr. Ffolliott's opinion the great body of "white" nomadic labor that wanders about the country from place to place, remaining a day or two on any job or long enough to get a little money to go to town with, constitutes the chief problem. The facility with which these men can move from place to place is mostly responsible for their wanderings. When work is plentiful, they can go to any labor center, hire out at an employment agency and secure free transportation to the different jobs. If they cannot get shipped by an employment agent, they can go down to the railway yards and board freight trains to almost anywhere they wish, if they have any money to pass to the trainmen for their transportation. The trainmen will accept almost anything that they can "shake down" from these laborers.

"As long as this state of affairs exists on the railways," continues Mr. Ffolliott, "we will have this vast horde of nomads traveling over the country from place to place and doing very little work. If the authorities in the different states would prevent this illegal traveling, the supply of labor would be increased and the tramp element, which is a great menace to the country, would be largely eliminated.

Why the Men Leave Work

"The reasons for a man quitting a job and going to another place are numerous. The camps may be uncomfortable. The board may not be good. The different camps are discussed among the laborers, and they know where the better camps are, where the contractors are who have the reputation of keeping good camps. A great deal has been done by contractors lately in improving the condition of laborers in the camps, providing better sleeping quarters, better dining rooms and better-cooked food.

"The climate also has its influence on the wanderer. The laborer will leave the Northwest as soon as the cold weather commences and travel south. It saves clothes. Again, as soon as the warm weather commences, he will leave the South and travel north. The ease with which he can get transportation, as explained above, facilitates this movement. Most of these laborers have no family ties and no stated home and get into the habit of traveling—a habit which is very hard to break.

"The men employed are of many nationalities. There is a great army of common laborers of various nationalities known as 'white' which seems to have no family or other ties and travels all over the country. Then there are the laborers from central Europe, who generally travel in gangs and keep together fairly well. Of late years there has been a tendency for individuals from the central European gangs to travel about with the native white men or by themselves. The nationalities mostly represented by these foreign gangs are Austrians, Greeks, Bulgarians, Montenegrins and Italians. These gangs are not nearly as numerous as they were before the war, and the war is largely responsible for the great scarcity of labor at the present time.

"As to the steps that are being taken by contractors to increase the efficiency and economy of labor and to encourage men to remain on the job, there has been no concerted movement. Individual contractors have done a great deal to improve the condition of their camps, providing proper water closets, baths and heated apartments for housing their men. Of course, these facilities can only be provided on jobs that last for a considerable length of time. In the ordinary railway camp in the country away from towns, it is impossible to have the facilities mentioned. Still, a great deal can be done and is being done by contractors who realize the great importance of having their men comfortable and having them remain with them during the work. But notwithstanding all the improvements, no way has yet been found to prevent the men from traveling from place to place in the manner described, and it is fair to attribute this almost entirely to the ease with which the men can travel on the railways."

Typhoid by States in 1916

Mississippi had the highest and Massachusetts the lowest death rate from typhoid fever of 33 states (including Hawaii and the District of Columbia) in a list for the year 1916 published by the United States Public Health Service. The table, reprinted here, gives evidence of "relatively complete" records for the states of Kansas, Maryland, Massachusetts, Minnesota, Mississippi, Montana, New Jersey, New York, and Washington, and for the District of Columbia, the Public Health Service says, since for these states 7 to 10 cases were reported for each death registered. The next to the last column of the table shows, by the same token, incomplete records for some other states, notably for Alabama, Louisiana, Oregon, Rhode Island and Wisconsin.

TYPHOID FEVER REPORTED DURING THE CALENDAR YEAR 1916

State	Cases Reported	Deaths Registered	Indicated Case Rate per 1,000 Inhabitants	Indicated Death Rate per 1,000 Inhabitants	Indicated Fatality Rate per 100 Cases	Estimated Population July 1, 1916

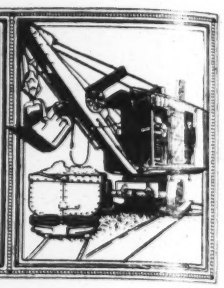
HINTS FOR THE CONTRACTOR

DETAILS WHICH SAVE TIME AND LABOR ON CONSTRUCTION WORK



Contracting Firm Invites Visitors To See That They Get Attention

THE PICTURE and legend shown in the photograph make it plain to visitors at one general contractor's office in New York City that the firm will appreciate action on the part of these same visitors calling attention to the remissness of men who are asked for and who do not

THIS SIGN IS NO BLUFF—THERE IS A BELL BENEATH IT THAT MAKES A NOISE

respond within a reasonable time, or to possible laxity on the part of its office-boy brigade. The significance of this sign is not lost on callers who have been in the offices of some other general contractors in large cities. The chest of the would-be interviewer who is looking for a subcontract or a job swells with satisfaction as he thinks, "At last, I'm going to get a little attention!"

It is only fair to the Raymond Concrete Pile Co. to add that the hopes raised by the sign are seldom disappointed. The members of the firm have made many friends by living up to it.

The wording of the sign was first used by the Gisholt Co., but the photograph and the arrangement originated with P. D. Case, assistant secretary of the Raymond organization.

Men Die of CO Poisoning, at Camp Built on Cinder Dump

DEATH and serious illness in a construction camp in Ohio have been traced, according to Dr. R. P. Albaugh, director of industrial hygiene in that state, to poisoning from carbon monoxide gas generated in a fire beneath the frozen surface of a cinder dump at a steel plant, where the camp was constructed. The seriousness of the occurrence arose from the fact that the camp was well built and ventilated, and the doctors called to the scene could think of no cause for the illness except ptomaine poisoning. It later developed that such poisoning did not occur, and the food and kitchen conditions at the camp were found to be of the best.

First Evidence of Trouble

The construction gang housed at this camp consisted of about 30 white and 30 colored laborers, with different bunkhouses. About 8:30 on the evening of Dec. 18 last, one of the men discovered a colored waiter lying unconscious on the floor of the bunkhouse, having apparently fallen from the second-tier bunk that he had occupied. The superintendent was notified, and with several others attempted to revive the negro. Before a doctor arrived, a second negro waiter was unconscious, and the superintendent and several others were suffering such distress that they had been obliged to go to bed. The physician treated all of them for ptomaine poisoning and, after remaining for an hour or two, left, thinking that everything possible had been done.

While the superintendent and the others who had not lost consciousness improved, the two unconscious negroes rapidly became worse; and at one o'clock in the morning the physician was called again. Being unable to respond, he sent a second doctor, who found the first waiter dead, five other men unconscious and five more suffering seriously. This doctor, knowing the treatment that had been given by the other physician, called ambulances and taxicabs and sent the 10 men affected to the hospital. All of the men, except one of those unconscious, who died four days later, without coming to, improved on the trip to the hospital, and all of them were fully recovered within a few days. The hospital staff also attributed the illness to poisoned food. It is noteworthy also that the physician who sent these men to the hospital himself suffered from a severe headache and drowsiness on his return from the camp.

On Dec. 22 following, the superintendent and three other men returned to the camp, which had been deserted since the night of the eighteenth. All retired feeling well; but when the cook arose to get breakfast in the morning, he collapsed. The superintendent lost consciousness on the way to the telephone to call a physician; and before a doctor reached the scene, only one man of the four was able to move. All were sent to the hospital, where one died within three days of what appeared to be pneumonia, while the other three recovered. An examination of the bodies of the three men who died did not reveal any trace of their having eaten poison. It was then decided to conduct an examination to determine the poison that had caused the three deaths.

Camp Buildings in Good Condition

It was found that the camp buildings were in good condition and well kept, that the food on hand in the storeroom was of good quality and in good condition, and that, while the camp was equipped with stoves for heating, each had a pipe without a damper leading straight up through the roof. The inquiry indicated that the fires were not kept over night and that the windows in all the sleeping quarters had been kept open at night. The kitchen was equipped with a sink from which a waste pipe led through the floor, wastes being allowed to be absorbed by the earth. There was no gas in the camp, and no gas mains or pipes were situated near the camp. The old fill on which the camp was located consisted of dirt, slag, scrap, mill wastes, ashes and cinders and had been in place for five years for the most part. No material at all had been deposited there for six months. It covered an area of nearly two acres from 10 to 15 ft. deep.

About 10 days before the occurrence of the first illness an employee of the steel mill at which the camp was located noticed a little vapor coming from the dump about 50 ft. distant from the camp, and an attempt was made to dig a trench around the location of the fire thus indicated, in order to put it out. The dump was found to be frozen to a depth of 2 ft., but at a depth of 5 ft. red-hot cinders were encountered and a second trench was started 10 ft. back of the first. Hot cinders were found in this one also, and successive trenches were dug up to the site of the camp buildings, where hot cinders were found at a depth of about 5 ft. Six of the men engaged in digging these trenches became ill, and two had to be taken to the hospital of the rolling mill.

Trouble Laid to Carbon Monoxide

It was concluded from these conditions that the entire trouble was caused by a carbon monoxide poisoning, the gas being formed from the smoldering incomplete combustion of cinders and other material and being unable to escape owing to the frozen surface, except beneath the camp buildings where the ground had been thawed. The hot water from the kitchen sink probably established a flue for the escape of these gases from the fire beneath. The symptoms of the men affected correspond exactly with those of carbon monoxide poisoning, with no resemblance to ptomaine poisoning. The fact that the camp had been occupied for about three months without any serious consequences indicates that the gas had never previously found its way to the surface in quantities sufficient to produce poisoning.

Carbon monoxide is especially dangerous because it is odorless, colorless and tasteless, two or three parts per thousand in air being dangerous to life. The poison acts by combining with the hemoglobin, thus destroying the blood. Pneumonia is a frequent complication.

The camp in question was of course moved immediately to some distance from the dump, and canaries in cages were placed in all the sleeping quarters to guard against the chance of the wind carrying gas in dangerous quantities from the dump, which was torn up to extinguish the fire.

The investigation of these cases is described by Dr. Albaugh in the *Journal of American Health* for Apr. 7 last.

Dragline Eliminates Haulage Equipment on Railroad Work

By W. A. PILLANS

Assistant Engineer, Lorain, Ashland & Southern Railroad Company, Lorain, Ohio

ON THE Lorain, Ashland & Southern R.R. recently completed and now being operated by the Pennsylvania Lines, a dragline excavator was used in making heavy cuts and embankment with very satisfactory results. The conditions under which the machine worked and its performance will interest the contractor who has not considered the possibility of utilizing his dragline on this type of heavy grading.

The Essex Construction Co., of Buffalo, N. Y., with a Bucyrus machine, took a contract to grade the first four miles south of Wellington, Ohio. Nothing heavier than an 8-ft. cut was met on the first three miles, the machine borrowing for the fills and washing the cuts, swinging about 60 ft. of each end of each cut into the adjacent fill. On the fourth mile, however, a cut 3000 ft. long, 1100 ft. of which averaged 19 ft. in depth, threat-

DRAGLINE MAKES CUT WHICH NEEDS NO TRIMMING

ened to displace the dragline for a machine better suited for such heavy work.

Making a Cut by Dragline

The profile indicated a large amount of waste on the mile, and the fill at the south end of the cut could be practically made from the cut next south. The material from the big cut could not therefore be placed in embankment within the limits of such an overhaul distance as would not make the price paid for overhaul exceed the unit price paid for excavation. As on nearly all new lines, first cost was a necessary consideration, and it was decided to waste the cut with the exception of a small amount on the south end. The dragline in making the cut rode the center line, swinging the material into spoil banks on either side. But one move through the cut was required.

The dragline machine worked to a 0.57% grade and on a 40-ft. curve the entire distance and handled approximately 40,000 yd. of heavy, yellow clay and blue gumbo during the six weeks required to complete the work. The slopes were cut from a 20-ft. base one to one and required no hand dressing. Some sliding due to frost action has occurred, but the work compares favorably with similar work done by steam shovel.

Highway Made from Spoil

A feature favorable to the contractor was that a highway which crossed the cut at a very acute angle, thus making an overhead bridge on the original line impracticable, had to be reconstructed. The waste along one side of the cut came in handy for building a new road from one end to near the middle of the cut, where it crosses at right angles and swings again into the old highway. After completing the cut, the machine returned on the line of the new highway, riding the spoil bank and grading the new road.

The fact that practically all of so heavy a cut was wasted may lead to a criticism of the practice or even the location. The location was an imperative one chosen from several made under the direction of the late Joseph Ramsey, Jr., which fact would seem to preclude any criticism as to its correctness. The practice was governed by the necessity of taking first cost into consideration and actual waste on the mile. The additional right-of-way necessary for the spoil banks was purchased for $250, which does not offset to any appreciable extent the dragline's economy. The illustration shows plainly the results accomplished.

Embankment South of Wellington

Equally as profitable to the contractor and as good an example of dragline economy, although not so unusual a performance for this type of machine, is the work shown in one of the photographs, an embankment 11 miles south of Wellington, built by the same machine.

HEAVY FILL MADE WITH LITTLE REHANDLING AND WITHOUT ANY FORCE OR EQUIPMENT FOR TRANSPORTING MATERIAL

At this point, the line crosses the Baltimore & Ohio R.R. with an overhead crossing, the approaches to which are partly trestled and partly filled. The south approach is a fill 2300 ft. long, with a maximum height of 28 ft. built on a temporary grade of 0.7%. About 48,000 yd. of material was borrowed from pits on either side, having widths of from 30 to 80 ft. and a maximum depth of 14 ft. Two moves through each pit were made, except for a short distance at the small end of the fill. On the first move, near the outside of the pit, the machine took out the material and placed it about halfway to the center line. On the second move this material was recast into the fill and the remainder of the pit made. At the high end of the fill during the second trip the machine climbed the side of the fill in order to cast to the top.

From 10 to 20% was allowed for settlement, as a great part of the material handled was from low-lying ground saturated from spring rains. An early and thorough settlement of the fill occurred, and only ordinary maintenance attention has been required since. The land purchased for the borrow pits cost $250. The expense of temporary trestles was saved; and although some of the dirt was handled twice, the dragline did away with the usual transportation equipment and force.

EDITORIALS

Topographers Can Aid Airplane Program

IT TAKES a trained eye to "see ground," to visualize a map, in other words. To the layman and to many engineers, even, the topographic map is a record to be interpreted by tedious study; but to the expert topographer it is a living representation of the country it reproduces. To him, a glance serves to accent the relief and to bring out the nature of the country; in short, he sees the ground as though he were in an airplane, sailing slowly over it. The time has now come when this skill may be capitalized for the benefit of the country. The nation's program calls for a magnification of the war in the air, for the construction of 50,000 airplanes. This service will demand many types of men, but no one is more important than those who will make up the eyes of the air fleet; and, in the minds of the experts in Washington, no class of men is better suited for this service than the expert topographer fitted to convert the living map of the earth spread before him under an airplane into the miniature reproduction from which the artillery directs its fire and the infantry plans its raids.

The Centenary of the Erie Canal

ON JUNE 27, 1817, was signed the first contract for the construction of the Erie Canal across New York State, and pursuant to that contract on the following July 4 the work of building that famous waterway was begun by formal excavation just west of Rome. The present year, then, marks the centennial of the beginning of the most historically potent piece of engineering in the United States. Strangely enough, the year gives promise of a revival of the state canal as a factor in the life of the country. The hundred years since its start have seen marked changes in transportation. The Erie Canal served in its first few years to establish New York City as the premier American port so firmly that the railroads, when they developed a score of years later, were forced into New York City, although it was surpassed as a railroad terminal by several other of the Atlantic ports. Soon the growth of the railroad became so great as to make the value of the canal negligible. It had outlived its purpose long before the last part of the century in which it was built, though there were several heroic efforts to revive it. In fact, the latest revival, the $150,000,000 New York State Barge Canal, seemed to be a waste of public funds to many, until strangely enough, the war with its necessity for transport of goods to the coast at a time when railroads are congested beyond all hope of ready relief and when terminals are congested even more than the main lines of the railroads has brought to the front once more the possibility of water transport from the Lakes to the ocean piers at New York. It is too early yet to predict how much of this expected use of the New York State Barge Canal will materialize, but it can be said that in this year, 100 years after the first pick was driven into the soil to make the original canal, there is better prospect of its successor becoming a useful link in the nation's transportation system than at any time since it was initiated.

Strong Letters from Water-Works Men

THE twenty-odd strong letters from members of the American Water-Works Association printed in our last and present issues contain many constructive suggestions. They show faith in the future of the Association but belief in the need for new life and reform. They indorse the editorial position taken in our issue of May 17. The very few letters of protest received have been not against our criticisms but against our letter inviting the membership of the Association to voice their criticisms through our columns. Among the suggestions received are: Elimination of objectionable association politics; reforms in nomination methods; more democracy; less exploitation of the Association by self-seeking members; employment of a strong, full-time, well-paid executive officer; consolidation of American and New England Water-Works Associations. A belief that the Association is essentially technical but should make itself useful to superintendents and other water-works executives who have not had technical education and experience is shown. The letters are strong, representative, stimulating. They will help the American Water-Works Association find itself and fulfill its destiny of ever-increasing usefulness.

The Freight-Car Shortage Is Serious

ONE industry after another makes complaint relative to the freight-car shortage. It is asserted, for example, that roadbuilding in the Middle West has been brought almost to a standstill by the inability to get materials to the work. It is said, again, that cars are not to be had for the moving of Southern lumber, although Western lumber is moving with comparative freedom. There is no need to feign surprise at the situation, or to suppose that there is an absolute remedy whereby everybody can have an abundance of cars. During several years of depression the railroad managers, lacking the money to build cars, were predicting difficulty with the return of business. They did not foresee the unprecedented traffic brought on by the war, for which they would hardly have been fully prepared in any event. The immediate point is that the serious situation is here, and everybody must put his shoulder to the wheel. Partial relief can be obtained.

Better Loading and Faster Moving

FOUR LINES of improvement are open in the car situation—building more cars, distributing them better, loading them fuller, and moving them faster. The building of more cars is essential as a provision for the future, but it cannot bring immediate relief. Car distribution is in the hands of the special board of the

American Railway Association, and it can be assumed that the board is using its best efforts to put the cars where they are most needed. The public can help little here. The public's opportunity is in better loading and faster moving. Better loading is a matter of education, in which all shippers can take part. Nearly two months ago the special railway board pointed out that while the average capacity of all cars is 39.7 tons, the average load of revenue freight is only 15.5 tons, or considerably less than half the car capacity. Here is an easy way to increase the number of available cars, by making each car carry more nearly the load for which it was built. In the moving as well as in the loading of cars, the shipping public has ample opportunity to help matters. Consider the absurdly low average run of 25 miles per freight car per day. Increasing this mileage to 30 would add the capacity of 515,000 cars to the present supply. The railroads can and must use their best efforts to speed the cars up in transit and in the repair shops. But the public also has the cars in its hands a considerable part of the time, and it must load and unload them promptly. And it goes without saying that more should be done of what has already been started—the discontinuing of some passenger trains and the luxurious features of others—to the end that main tracks, yards, repair facilities and locomotives may be more fully released for the moving of freight cars and freight. The public should not oppose these reductions in nonessential passenger service.

Price-Fixing Must Meet Two Basic Demands

THE matter of the arbitrary fixing of prices for materials bought by the Federal Government has reached the point where it demands the earnest attention of economists and of able persons more familiar with industry, and especially with the steel industry, than any of the officials who have so far engaged in combating excessive profits. In view of some unscientific and dangerous attempts at price regulation that have been made of late, it is gratifying to note that a movement is under way to regulate prices not only of finished products bought by the government, but of all materials entering into those products, and, more important yet, of the price at which the same materials are to be sold to the general consumer.

The two basic requirements of the present situation are expressed in this movement. Prices must be fixed wisely, on the basis of expert study; and they must be fixed for the private consumer as well as for the government.

The seriousness of the situation is emphasized by facts with which everyone who reads the newspapers is familiar. In the face of a report by the American Iron and Steel Institute that steel products for ship construction cannot now be sold for less than $95 a ton at any profit to the producer; in the face of the fact that pig iron is selling at and above $50 per ton, and that enough coke to make a ton of pig iron now costs more than $20, more than the market price of pig iron a year ago, the Secretary of the Navy maintains that ship steel is worth only $65 a ton. This opinion, given after an investigation, the methods of which are not known, by a man who prior to taking office had no connection with or knowledge of the steel industry, is about to be imposed upon the steel industry by means which are not advertised, and in a manner bordering on the confiscatory. Not only a former newspaper publisher, but also a man whose experience has been confined to the lumber business has taken a hand in this sort of price fixing; the chairman of our shipping board has declared, after an even more cursory and private investigation, that ship steel sold at $56 a ton will yield a handsome profit to the makers.

The tendency thus evidenced to disregard the knowledge of men connected with the industry and the findings with regard to fair prices of bodies in a position to know whereof they speak is dangerous. It is to be hoped that, should the Federal Trade Commission or the Council of National Defense be intrusted with this work, the findings of such a body with reference to maximum prices will be made binding on the executive officers of the government. Should any agencies bring about the fixing of a price to the government on steel products below production costs plus a fair operating profit, the private consumer obviously could not be allowed to enjoy the same price. On the contrary he would have to pay a greatly increased price; the country in general and construction work in particular would suffer from it in a serious and needless manner.

The first result, should the government insist on being furnished at too low a price with, say, 10% of the country's steel output, reducing by that amount the supply for all other purposes, would be to increase the price of steel to all other consumers up to and probably beyond the point at which the steel companies would recoup the loss on all material furnished the government. The heavy current demand, which has already responded without a waver to the most astounding advances, puts this matter beyond dispute. Thus, while well-meaning officers were saving a direct taxation burden to the country in securing a slightly lower price on direct government purchases, they would be levying an indirect, special, unbalanced tax on all users of steel products, probably in excess of the direct taxation which they might save. As the government came to take more and more of the steel output, the effect would become increasingly serious. The power of taxation, it must be remembered, is conferred on the legislative branch of the government, and cannot be assumed by an executive officer without something akin to usurpation of authority.

In addition to the illegal taxation that would thus be imposed, however, there lies in unwise price-fixing a grave threat of derangement to the many and exceedingly important steel-consuming industries of the country. This threat is especially serious to all construction work into which steel enters. There are no definite figures kept, but it is safe to say that high prices have already cut the annual use of steel in new construction of all sorts to less than 5% of the total output. The inevitable result of unscientific price-fixing—such for example as advocated by the heads of the navy and the shipping board—would be to cut it still further, to reduce the volume of work and to postpone much work that is needed, war or no war. Such action would put a harmful curb on all steel construction that should and might be carried on in spite of high prices.

The country can afford to take no chances with the fixing of maximum prices by persons unfamiliar with the industry concerned. This is no time to take account of personal prejudices or preconceived notions as to how much it ought to cost to make something. Therefore it is encouraging to note that the present proposals contemplate getting at the root of the matter by a real investigation, fixing all the prices involved in the production of steel clear back to raw materials and the cost of food and clothes for the labor engaged in the industry.

From all consideration on the subject it will be clear that the price fixed for government purchases must be a *fair* price. Anything else will result in serious injury to the country. It is equally clear that, once a fair price is fixed, it must be the same to government and to private consumer. Finally, price fixing can not deal with finished material alone, but must extend down to the ultimate sources, the raw materials.

Even this, though done in the wisest and most far-sighted manner, may not succeed unless the price-fixers take into account the fact that some plants and some sections can always produce for less cost than others, and the fact that large stocks of various materials of manufacture, bought at high prices, are already on hand at many plants, and must be worked off gradually. No amount of price fixing can take the money paid for these materials out of the pockets of those who sold them and return it to the manufacturers.

In view of the serious consequences which mishandling of this matter would have for construction work and for the general public, and in view of an evident tendency on the part of some to mishandle it if given too free rein, the readers of *Engineering News-Record* should keep a close watch on the doings of whatever body is selected to look into the matter, and should unite in helping it to get at the truth and avoid fatal blunders.

Knowledge of Column Strength

A TESTING campaign planned on a large scale and carried out with brilliant precision has been completed by the United States Bureau of Standards, to the great benefit of the engineering profession and those who use the engineer's services. Its outcome is to provide definite and new information on the strength of steel columns. Results were obtained that form the basis for far-reaching conclusions.

Strange as it may seem, we have had hitherto no really comprehensive test knowledge concerning the strength of steel columns. In the quarter-century since steel came into use, only a few small, scattering sets of column tests have been made, and even these more often gave negative results than positive. This is not the place for a review of prior tests, but the plain fact may be stated that the two hundred or so tests of large-size columns in the present series provide the first satisfactory steel-column data that we possess.

Among the big results of the series are these: Solid-section columns and well-built columns of open section are not subject to local failure, but remain in service undamaged up to the point where bodily bending or buckling of the column occurs; this buckling action utilizes the full compressive strength of the metal, the quantity known ordinarily as the compressive yield-point. The shape of column cross-section is immaterial. The effect of column length justifies the accepted column formulas, with a strength-reduction of about 25% between slenderness-ratios 25 and 75. For ratios below 25, no increased strength can be counted on, which again corroborates prior beliefs.

All appearances are that the bending stress arising from small initial eccentricity of load, of metal or of resistance, increased by that due to the resultant buckling, adds to the direct compression until the metal on the concave side of the column reaches its compressive yield-point. In all (or nearly all) cases the failure is quick after the yield-point is passed: Elastic failure of the metal spells structural failure for the column. But in the very short columns, of length-ratio about 10, buckling is so minor a factor that direct axial squeezing remains dominant even after elastic failure, and a largely increased load can be carried beyond this point, the column slowly crushing down. An exception to most of the above statements is found in the case of tie-plated columns, whose strength is low; this fact has been accepted by many engineers in the past, on theoretical grounds, but there was no proof by test to refute the favorable opinion which some other engineers held of this type of column.

But the biggest fact of the whole investigation is that some lots of steel (we speak now only of standard commercial bridge steel) make much poorer columns—that is, weaker columns—than other lots of steel—and that *we do not know how to recognize the weak steel*. In other words, the standard tension test, which is the only criterion by which steel is bought and graded, fails to distinguish between good and bad column steel. Most of our bridge steel produces columns having a strength of 34,000 to 37,000 lb. per sq.in. (at length-ratio 25), but other columns are weaker by one-sixth to one-third.

So long as the weak columns are not sorted out from the strong columns, we must, for safety, assume that all columns are weak. We must proportion all columns as though their ultimate basal strength were only 27,000 lb. per sq.in., instead of 35,000. This represents 30% increase section of metal.

The view may be taken that this is satisfactory. At least one engineer closely concerned with the column question has stated to *Engineering News-Record* that 27,000 lb. is strong enough for a column, that it gives a sufficient safety margin over customary working stresses. This is true and good, so far as it speaks for the safety of existing structures; but it has no meaning for future design. If proper means of selection should make it possible to get columns possessing 25% greater strength—in other words if all columns could be as good as our best columns, by eliminating those made of weak steel, there would be corresponding economy to be obtained in all future construction.

So far as the present test facts indicate, nothing stands in the way of getting this increased column strength except a reluctance to devise and apply methods of test by which the higher-strength column steel can be selected. Under the present year's urgent need for economy, with steel commanding tremendous prices and a real shortage of structural steel already existing, mere inertia of custom must not stand in the way of an obvious step toward saving steel.

LETTERS TO THE EDITOR

Comment on Matters of Interest to Engineers and Contractors will be Welcomed

Heap Test Only One Indication of Excellence of Concrete

Sir—I have read with interest Mr. Harrison's letter in *Engineering News-Record* of June 7, commenting on my recent article in this paper entitled "Concrete Consistency Measured by a Simple Field Test." In defense of this test, I should like to note that Mr. Harrison's very convincing criticism is directed not against the test itself, but against a peculiar misinterpretation of its scope and purpose very different from anything I stated or intended to imply in its description.

One cannot deny Mr. Harrison's point, "The simple truth is that any good foreman could meet the proposed specification with undermixed and overwatered concrete." It is plain that the specification could be readily met by concrete abused in this or many other ways—for example, with all the cement left out. The heap test certainly cannot be expected to dispense in any way with the necessity for complete control over the ingredients of concrete and the time and manner of mixing. It is not intended to furnish a general guarantee of excellence, but is simply a field test for consistency and implies nothing as to the quality of the concrete on which it is used, except that in one more of the many operations in its manufacture systematic control has replaced guesswork.

Design of Imhoff Tank at Fort Benjamin Harrison

Sir—In the June 7 issue of *Engineering News-Record*, a brief description, with illustrations, is given of the sewage-disposal plant now under construction at the officers' training camp at Fort Benjamin Harrison, Ind. Included in the disposal plant is an Imhoff tank, and in the description of the plant the statement is made: "The plans for the tank are reproduced here in somewhat more detail than ordinarily the simplicity of the plant would warrant, as other camps may be confronted with a similar problem."

The statement seems to imply that this tank might perhaps serve as a model on which to base the design of Imhoff tanks at other training camps, should tanks there be needed. It is for fear that this is just what may happen that the writer feels called on to point out that some features of the design are not in accord with good practice. It is appreciated that but little time was available for working up the design and that the two features which the writer will call attention to may therefore have slipped through without sufficient consideration. The writer refers (1) to the arrangement for admitting the solids from the settling chamber to the sludge chamber, and (2) to the possibility of having a current of raw sewage flow through the sludge chamber. Reference should be made to the diagrams on page 507.

In designing the slot between the settling chamber and the sludge chamber it is better to so arrange the construction that the sliding through of the solids into the sludge chamber will be facilitated rather than retarded. If the design will be examined, it will be seen that the solids sliding down the sloping bottom of the settling chamber tend to bring up against the shoulder provided to prevent the escape of gases up through the slot into the settling chamber. Similar constructions elsewhere have given trouble, clogging up the slot, due to the accumulation of solids on the shoulder. Again, it will be seen that the cleaning of the slots will be more difficult than with other arrangements that readily suggest themselves.

With reference to the second feature, the possibility of having a current of raw sewage flow through the sludge chamber, it will be seen that two settling chambers are provided and that they are connected, one with the other, by means of the sludge chamber. If, in operation, the hydraulics are such that the same volume of raw sewage that is admitted at the inlet end of each settling chamber passes out at the outlet end of the chamber, then no flow of raw sewage should occur through the sludge chamber from one settling chamber to the other. But with the design shown, only a glance is needed to see that it may be found extremely difficult to secure this result, due to irregularities in construction and differences in head on the inlet and outlet gates. Not only is it possible, but extremely probable, that even with all eight inlet and outlet gates wide open a current of raw sewage will flow through the sludge chamber; and if some of the inlet or outlet gates, or both, are left closed or partly closed, a current of raw sewage is almost sure to flow through the sludge chamber. Such possible conditions should be avoided, and with a different design they can be avoided.

The writer does not mean to go as far as to say that the tank in question may not be made to operate satisfactorily, but he has seen similar conditions elsewhere where tanks having similar features of design did not operate satisfactorily. And it is to sound a word of warning to him who, through lack of experience, with the best of intentions, copies or follows closely the design shown, that the above has been written. OPERATOR.

When Ship Freight by Motor Truck and When by Rail?

Sir—The writer has read with great interest the article under the above title by Prof. C. C. Williams in *Engineering News-Record* of May 10, p. 315.

Professor Williams complains, "Competition of motor-truck haulage is becoming more and more a matter of serious concern on the part of the railways. Just as they have had to accept the competition of electric interurban railways for certain classes of traffic, they are now facing a similar competition from motor trucks on improved highways." Later he says, "From the foregoing analysis, the desirability of reducing terminal costs becomes manifest, if the railroads are to hold the com-

petition from motor trucks to a minimum"; and again, "The case is a repetition of the struggle between the inland waterways of an early day and the railroads."

The writer cannot but feel that the exigencies of the present transportation situation are lost to Professor Williams and that his fears for the well-being of the railroads are premature. It is needless to enter an extended discussion of what has been conclusively demonstrated during the past year—namely, that the railroads are incapable of transporting the greatly augmented tonnage of commodities which has been presented for shipment. They have not been able to supply cars or motive power for this purpose.

On already deficient railroad service are now placed the further demands created by our entrance into the war. The entire situation is not one in which the railroads need protection from competing means of transportation. Rather, the case is stated by saying that the country urgently requires every supplemental means of transportation which can be made of service, if industries are not to be further sapped of their vitality. Without the relief motor trucks can supply, shipping conditions are going to become worse rather than better.

The Cleveland-Akron Highway in Ohio affords a striking illustration of the point in question. This road is improved for a distance of 40 miles to Cleveland, so as to make feasible the relief sought; and it is still to be noted that Akron railroads are taxed beyond the limit of their capacity. The statement was recently made that, if this road were to be shut off to motor-truck transportation, 20,000 men would be thrown out of work in the City of Akron. A recent traffic count over this highway showed a total tonnage of 890 in 72 hours, composed of all varieties of commodities. Were our public highways all developed to the extent to which this highway has been developed, the transportation problem that exists today could not have arisen.

Any theory which holds that the railroads are going to suffer from motor-truck competition fails to take into account two well-demonstrated facts—first, that the railroads make but an indifferent profit from short-haul less-than-carload-lot freight shipments; and second, that they are unable to care for the freight presented to them for long-haul carload shipments.

Professor Williams's concluding statement, "There is ample room for both the railway and the motor truck, and it is hardly necessary that either enroach on the field of the other," well expresses the present situation; but Professor Williams has arrived at this conclusion from an entirely different line of reasoning than present circumstances make tenable.

Instead of decrying and seeking ways to limit motor-truck transportation, every means should be extended to bring our trunk highways to a condition that will permit motor trucking with certainty and dispatch. It is urgently needed now; it will be more urgently needed later, particularly when we know of manufacturers who are forced to ship such commodities as copper, aluminum and farm machinery in carload lots by express, instead of by freight.

American Water-Works Association —As Its Members See It

"Radical Reform Needed"—Horton

Sir—It has seemed to me for some time that radical reform was needed in the organization of the American Water-Works Association. I believe there are several men who have been working strenuously and conscientiously to bring about this reform. I think, however, there has been a certain element in the association which was greatly misguided as to the functions of such an organization. I believe that an organization of this kind should live up to its agreements in a businesslike way with outsiders, and it should live up to its agreements with its own membership in matters of publication of papers, etc.

It has seemed to me that there was a certain clique in the society which for some reason or other furnished numerous papers which were published in the "Proceedings"; and if there were expensive reprints to be made, apparently they got these reprints where others, as I know personally, have been unable to get reprints even when they offered to pay for them themselves. I know of men who have been members of the society for many years, who have never been asked to present a paper or give experience. I think that the society should at least be representative of its own membership, and I do not think it has been representative of its own membership in the past. The organization should be conducted on the square, without favoritism, without efforts to secure undue advertising for particular persons.

ROBERT E. HORTON,
Consulting Engineer.

"A National Technical Society"—Hopkins

Sir—Referring to your editorial in *Engineering News-Record* of May 17, on "Revolution or Reform in American Water-Works Association?" the writer indorses your statement that the association is a national technical society with a real reason for existence, rather than a united brotherhood of water-works superintendents. Although the early constitution of the association plainly had for its prime object fraternal intercourse between those engaged in water-works management, the admission to membership at that time of those engaged in the design and construction of water-works made it inevitable that the association would more and more take on the character of a technical society, without which it is questionable if it could have survived. The object of the association, as stated in Article II of the constitution, is at the present time far more broad than it was 30 years ago when the nontechnical idea was apparent, when there was about 30% of the active membership professional engineers as against about 42% at the present time, including chemists and bacteriologists.

The last active-membership list of the association shows that about 32% are superintendents and managers of water-works and about 26% unclassified or in miscellaneous occupations. Of the superintendents and managers, many are educated and highly trained men, and as to technical ability rank with the professional engineers. This is also true of many of those classed among the 25% of miscellaneous. It, therefore, seems clear that there are now probably few members who do not appreci-

ate and desire technical papers. However, technical papers should continue to be written, as they have been up to the present time, as free as possible from matter unintelligible to the average of water-works superintendents and managers, or we may expect them, in these days of many societies, to swarm the hive which they have considered theirs. Papers of a highly technical character might be presented more properly to some other technical society.

The constitution, as it now stands, appears to me to be comprehensive, excellent and to meet quite well the requirements of the association. Frequent and unimportant amendments to it are to be deprecated. To prevent a recurrence of the unfortunate result of the recent balloting for officers, the constitution might properly provide for the written consent of a member before he be placed in nomination for any office.

The constitution should also provide for the notification to the members of any proposed amendment, a fixed time in advance of the meeting at which voting on such amendment is to take place.

Although papers presented at the meetings of the local sections have been edited and printed in the "Journal," there appears no section of the constitution specifically authorizing it.

CHARLES C. HOPKINS,
Rochester, N. Y. Consulting Engineer.

"This Is the Time for Active Coöperation"—Conard

Sir—It seems to me there is room for all of us in the American Water-Works Association, and even more than the present number, both of the so-called technical men, the practical men, and those who produce the commodities that are used by the two classes mentioned. I also think that this is the time for active coöperation and team work on the part of everybody. If in the judgment of those who by a majority vote have been placed in charge of the affairs of the association there is certain work to be done, let us any and all stand ready to cast aside personal feelings of whatever nature, and make common cause to place the American Water-Works Association where it ought to be in the field of the great national associations of the American Continent—in the front ranks.

W. R. CONARD,
Burlington, N. J. Inspecting Engineer.

Fall Conventions and Single Association

Sir—My first suggestion relates to the time of holding our conventions. Each superintendent has his hands full at the convention time. A week's vacation by the merchant at Christmas would be suicide or else show that the merchant should get into some other business, as his own would run without him. A second advantage in the fall would be to get the full benefit of the manufacturers' exhibit. This is often of more importance than the papers, as the best engineers are spending all their time to solve our problems. In the fall we would have the chance to order for the spring rush.

I believe in one association divided into sections. I know the New England Association has better ideals and closer association of its members, but does it not tend to take away from our main association? Would not all be better off if it were merely a section?

SUPERINTENDENT.

Society Service

A Section Dealing with the Results of Teamwork by Technical Men

RESULTS have been secured in Rhode Island, where practically all the resident members of the national engineering societies, together with twice as many more not so affiliated, are associated in the Providence Engineering Society, a membership of over 500. The general meetings of the past year have had an average attendance of 275 and the section meetings, of which there were 37, an attendance of 45. Local topics discussed at these meetings have aroused a great deal of public interest.

The society has been instrumental in securing important state legislation, has taken an active part in public safety work, has made an engineering census of Rhode Island, and is helping the advancement of technical education in the public schools. This means that the engineers of Rhode Island are getting acquainted with each other and have the inspiration of working in a common cause. It means that they have an opportunity for original work of a public nature and the development of personal initiative. It means that the society has at its disposal facilities for obtaining the opinion of every engineer in the state upon any matter of public interest. In other words, the society is thoroughly representative of this state as a unit of the nation.

ENGINEERING ASSOCIATION OF NASHVILLE

One of the first things this organization did of a civic nature after it ceased to be a chapter of the defunct Engineering Association of the South was to kill a $2,000,000 bond issue hungry politicians decided to load onto the city for additional water-works and a light plant. The task of presenting to the Government the case of the proposed Mussel Shoals hydro-electric plant for the manufacture of nitrate was turned over to the society. A bankrupt railroad runs out of Nashville. A recent agitation for the bankrupt city to buy the bankrupt road has resulted in the society's taking up this $4,000,000 problem and presenting it before the public in the proper light.

CLEVELAND MATTERS

The parent society has turned over to the Cleveland Association of members of the American Society of Civil Engineers, 22,000 books, duplicated by the library of the Engineering Societies Building, for deposit in the library of the Cleveland Engineering Society. A plan is under way to have the society library made a branch of the Public Library, probably retaining the present librarian, G. H. Tinker, who was chiefly responsible for obtaining the gift.

Each delegate to the last Conference on Coöperation has been furnished with a mimeograph copy of the stenographer's report by C. H. Crawford, assistant engineer, Nashville, Chattanooga & St. Louis R.R., and representation of the Engineering Association of Nashville. A few copies are available for general distribution upon application to Mr. Crawford or to C. E. Drayer, secretary, Cleveland Engineering Society.

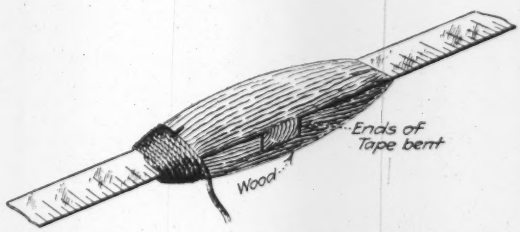
Simple and Certain Field Repair for Broken Steel Tape

By SAMUEL WARREN
New York City

FROM time to time there appear in the engineering magazines, methods of repairing a steel tape in the field. Most of them will slip without entirely pulling apart and are a constant source of worry. The method outlined below is guaranteed not to slip.

Heat each of the broken ends with a match, drawing the temper for about a quarter of an inch, so that it will bend without breaking. Slip the end between the



THIS REPAIR MAKES SLIPPING IMPOSSIBLE

blades of your knife and bend to a right angle. Then proceed to mend it by splitting a small stick and making notches in one half to take the bent ends. Wrap with a piece of twine after tapering the ends of the stick so that it will not catch in the brush. Then proceed to chain—and don't worry as to whether your tape has stretched half an inch at the splice.

Piles Are Driven by Four-Foot Drop

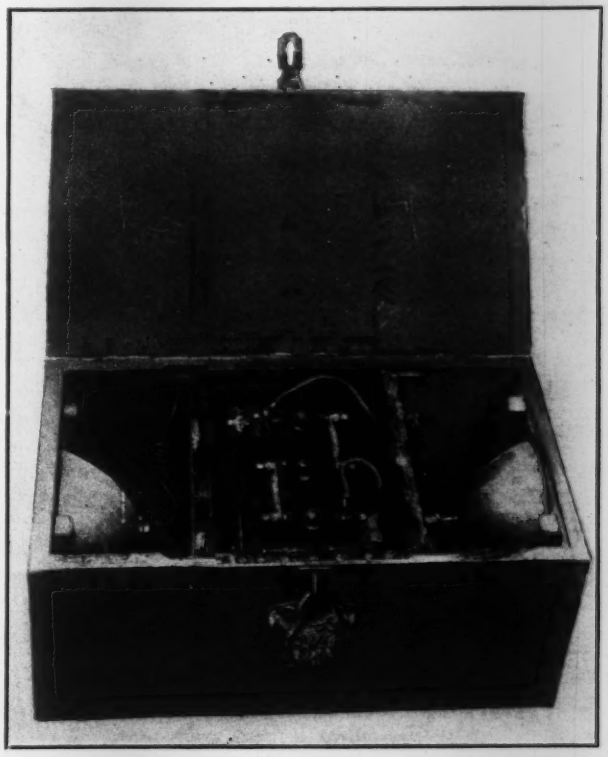
LIGHT blows with a drop-hammer piledriver were required in driving piles for the fenders of a new ferry transfer slip for the Baltimore & Ohio R.R. at Baltimore, Md. The piles are of oak, about 50 ft. long, specified to be 8 in. in diameter at the small end and at least 12 in. at 4 ft. from the butt. The water is about 19 ft. deep, with 3 ft. of soft-mud bottom and then material hard enough to require the use of rings on the pile heads and light blows from the 2250-lb. piledriver hammer. The average drop is only 4 ft. The drop hammer was used because it was a part of the contractor's equipment, but owing to the hard bottom it became necessary to coax the piles down rather than to drive them with heavy blows.

The specifications required that for the last 10 blows the drop should be 20 ft. and the penetration not over 5 in. It was found that such a drop in combination with the hard bottom caused breakage of the piles. The last blows, therefore, were made with a 10-ft. drop, which gave an average penetration of about 1 in. per blow. The railway company's engineer keeps a record of each pile, showing at first the number of blows for each 12 in. of penetration and later the number for each 6 in. For the last blows the penetration per blow is noted.

The piles are driven 9 to 10 ft. into the hard material, some requiring 147 to 153 blows. From 20 to 24 piles per day are driven, more time being consumed in moving the piledriver, selecting the pile and getting it into the leads than in driving it into the ground. The work is being done by the Phœnix Construction Co., of New York. It is under the direction of W. S. Bouton, bridge engineer, Baltimore & Ohio R.R., and G. E. Schaeffer is inspecting engineer in charge for the railway company.

Electric Tunnel Lights in Closed Box for Safety

IN THE construction of the recently completed Cleveland west-side water-works tunnel, W. J. German, engineer, Federal Bureau of Mines, ordered that all lights should be of such a character that they could not ignite the explosive mixture of gas found in the tunnel. The



AUTOMOBILE BULLET LIGHT, SET IN THE END OF A BOX AND DRAWING CURRENT FROM A STORAGE BATTERY, MAKES SAFE TUNNEL ILLUMINATION

cap lamps worn by the men are of the Edison storage-battery type, locked and unlocked above ground, but the lights used in construction work itself, which are nec-

essarily larger, are built into a very carefully constructed box.

The reflectors are "bullet" automobile headlights, each containing a 24-watt lamp that is protected by wire-glass and connected to a 90 ampere-hour Willard storage battery set midway of the length of the box. The latter is 13 in. wide, 10 in. high and 23 in. long, outside dimensions, and is lighted and locked above ground—the key being kept there. The carpentry work on the boxes is of a very high grade, all joints being tight, serving to keep the explosive gas out of the box as much as possible, in the event of a spark being caused by a loose connection at the battery.

This arrangement of tunnel lights was developed in the Cleveland Water Department, though its prototype was probably that of John W. Dolman.

Save Trouble by Using Well-Built Forms

AS THE engineer watches the ordinary contractor set his side forms for concrete roadwork, he easily realizes that not enough consideration is given to their construction and grade layout—facts which later on are sure to cause much extra trouble and loss of time. The forms should not of course be built to a degree of over-nicety, but should be so constructed as to prevent their becoming easily bent, warped or worn out of shape. Another feature oftentimes overlooked is the desirability of staggering the joints, thus preventing an undulation forming across the road in case the joints are out of grade. To

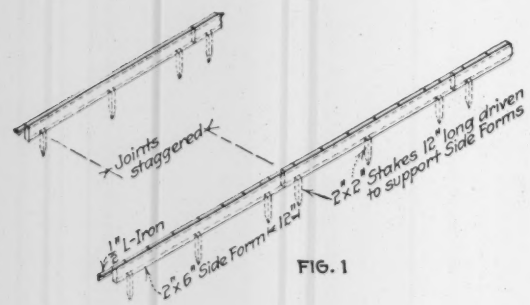


FIG. 1

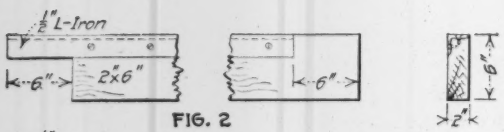

FIG. 2

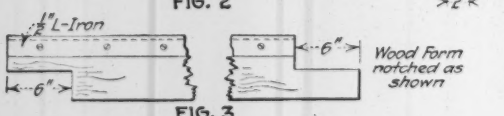

FIG. 3

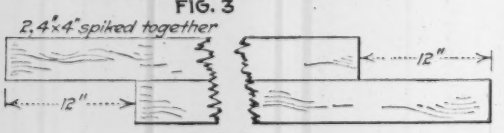

FIG. 4

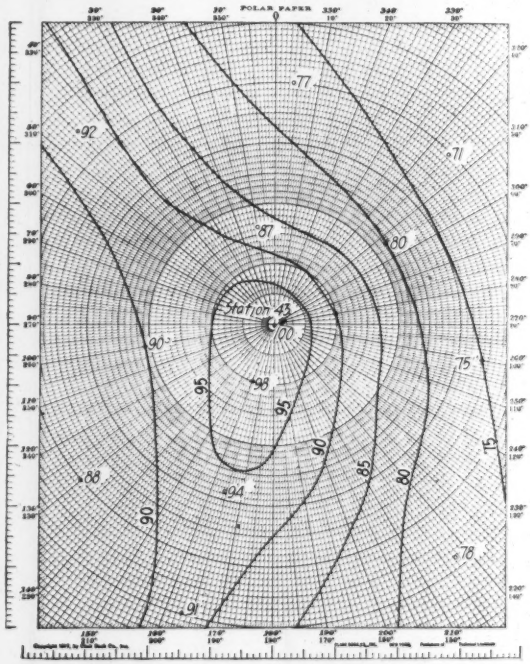
STANDS MUCH ROUGH HANDLING

obtain a method of easily supporting side forms for grade, 2 x 2-in. wooden stakes are driven to the proper elevation of the bottom of the form; and they, in conjunction with alignment stakes which are not shown, and together with the method of staggering the joints, make a satisfactory arrangement. Figs. 2 and 3 show details of wooden side-form construction, Fig. 2 showing the angle iron extending 6 in. beyond the end to insure that adjacent forms will be maintained at the same elevation. Fig. 3 shows a modified design that prevents the angle iron from becoming easily bent when the forms are roughly handled, while Fig. 4 shows a side form made entirely of wood.

Reducing the Cost of Plotting Stadia Notes

By CHARLES R. THOMAS
Assistant Engineer, Construction Service Co., 15 William St., New York

BY PLOTTING stadia notes on separate sheets such as are shown in the accompanying sketch and tracing the finished map from these sheets, the cost of plotting stadia notes has been materially reduced and the speed al-



SPEEDS UP INTERPOLATION—INCREASES ACCURACY

most doubled. Plotting topography by this method becomes independent of drafting-room equipments, a lead pencil being the only tool required.

The ordinary method of procedure is to sketch the topography in heavy pencil lines and either paste the sheets together for the draftsman or send them to him separately. The sheets are placed under the tracing cloth, and the finished tracing is made directly from them. The paper used for ordinary work is 8½ x 11 in. in size. Using a scale of 100 ft. to the inch, a length of 1000 ft. and a width of 600 ft. of topography may be plotted on each sheet. Topography may be plotted by surveyors on rainy days, either in the field or in the office, several men working independently on separate parts of the notes. It is remarkable how much the use of a graduated paper speeds up the interpolation of contours and increases the accuracy of scaling.

This method of plotting topography was developed during the past year by R. T. Dana, chief engineer of the Construction Service Co., using polar coördinate paper secured from the Clark Book Co., New York.

Tinned Copper Is No Better Than Tin Plate as a Roofing Material

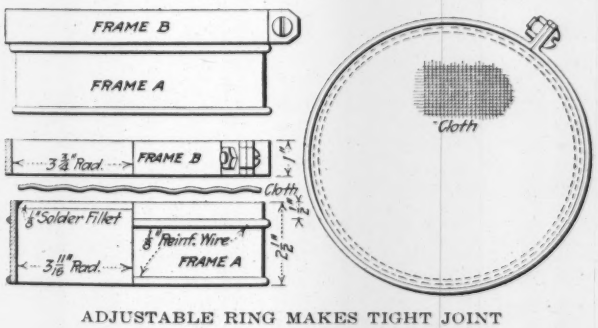
THE Bureau of Standards has recently investigated the unusual and interesting corrosion of the roofing material of the Library of Congress. This building has been covered since about 1893 by tinned sheet copper that has become covered within the last 10 or 15 years with small pits; in many cases these pits have extended completely through the sheet. Such a condition is interesting, particularly in view of the fact that Washington is uncommonly free from smoke, which is ordinarily understood to be a strong accelerating factor in corrosion. The investigation has shown that the corrosion was due to no accidental inferiority of the material, but that it is to be considered as characteristic of all material of this type. It appears, therefore, that tinned copper is not superior in any way to tin plate for roofing material and that in view of its greater cost can no longer compete with it.

Tinned sheet copper is used also for containing vessels such as milk cans and for fittings such as troughs, etc., for soda fountains and breweries. It is probable that such articles would also be subject to pitting corrosion of the same type if they were not worn out by actual abrasion before the corrosion had proceeded far, according to Technologic Paper No. 90.

Cost of Sieves for Testing Laboratories Reduced

SINCE in the routine testing of portland cement it is necessary to determine the fineness of samples at frequent intervals, a number of sieves must be used continuously. Where several hundred tests are made daily, many sieves of the same mesh must be available at all times. Figuring the wear and tear to which these sieves are subjected, even with the most experienced and careful operator, the replacements result in the cost of the fineness test becoming an appreciable item of expense.

The high grade of 100-mesh and 200-mesh sieve cloth may be obtained commercially. Many laboratories use this cloth with frames somewhat similar in construction

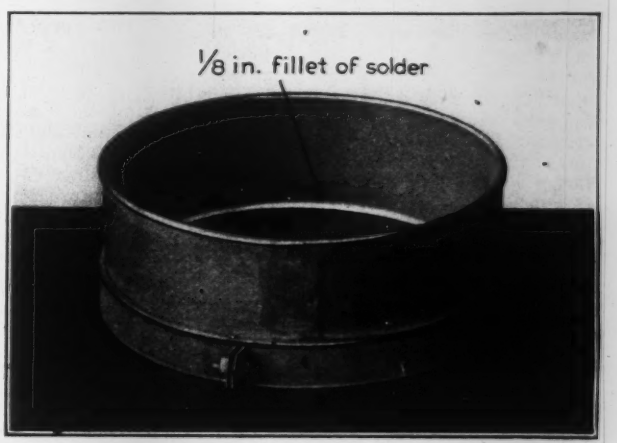


ADJUSTABLE RING MAKES TIGHT JOINT

to the ones illustrated, which are in service in the laboratory of the Universal Portland Cement Co. About 7½ in. in diameter, the frames are made of $\frac{1}{32}$-in. sheet brass and reinforced with ⅛-in. diameter wire. Sieve cloth is received in 36-in. squares and cut into 9-in. squares, which is the proper size for a 7½-in. frame. The cloth is then placed over the main frame *A*, after which the frame *B* is forced on, holding the cloth rigid and in place. If the frames are fitted properly, there is no tendency for them to separate while the sieve is in use; but if they should become loose, this difficulty may be overcome by several wrappings of adhesive tape around the sieve or by a rim provided with wings and a bolt, as shown in the illustration.

Objection to these frames is that in forcing the retaining ring over the main frame a strain, which results in eventual failure of the sieve cloth near the frame, is brought to bear. In order to permit the further use of the cloth discarded from the 7½-in. frame, several sets of frames 6½ in. in diameter are provided.

The life of a 200-mesh cloth subjected to average usage in the Universal Portland Cement Co.'s laboratory varied from one day to twenty days until some time ago, when



FILLET OF SOLDER EXTENDS LIFE OF SIEVE CLOTH THREE TIMES

the suggestion was made that a ⅛-in. fillet of solder be placed around the sieve at the inside juncture of the frame and the cloth. The results obtained are remarkably gratifying—one 200-mesh sieve that has been in service continuously for 90 days is still in excellent condition and will undoubtedly continue satisfactory for some time to come. Two other 200-mesh sieves with cloth soldered in have been in use 55 days and 63 days respectively and are still serviceable.

The results obtained by soldering 100-mesh cloths in the frames are proportionately good; 100-mesh sieves are subjected to much more severe usage than are the 200-mesh sieves, the average life of a new 100-mesh cloth having been from 7 to 10 days previous to the introduction of the fillet of solder. Several 100-mesh sieves, with the cloth soldered in, have been in continuous use for 19 days and are still satisfactory, while two others gave 37 days' service each with slight repair. From this experience, the soldered fillet seems to increase the average life of the cloth at least threefold.

The cost of soldering is negligible. When a cloth can no longer be used in a 7½-in. frame, it can be cut out and soldered into the 6½-in. frame. In addition to the great saving in sieve cloth, experience indicates that it takes less time to determine the fineness of a sample, as there is no opportunity for the residue to be retained between the cloth and the frame, as was sometimes the case with the previous design. For the same reason, the fineness results obtained by different operators on the same sample will check more closely.

NEWS OF THE WEEK

Current Events in the Civil Engineering and Contracting Fields

Los Angeles Becomes Shipbuilding Center

New Company Incorporated for $1,500,000 Is Constructing Steel Food Ships

A new shipbuilding company was recently incorporated in Los Angeles as the Los Angeles Shipbuilding & Drydock Company, having a capital of $1,500,000, all subscribed. Within a few hours after the completion of the organization of the company a permit for the construction of the plant was issued by the City Building Department and excavations were under way. The grounds for the plant consist of 70 acres in the west basin of the inner harbor of Los Angeles, about 30 acres of which will be used at this time. The plans for the first unit provide for a dozen buildings, large yards, and four building ways.

Within a short time three dredgers will be working night and day filling in portions of the site. Each of the four shipways to be laid out at this time will be 500 feet long by 60 feet wide. Three more ways will be built when the second unit of the plant is added. Among the large structures to be built this summer will be the laying out buildings, the main machine shops, foundry and carpenter shops, general warehouse and buildings for auxiliary construction, together with main office buildings. There will also be a wharf 500 feet long by 60 feet wide equipped with "sheer long" and other lifting machinery. One of the modern features of the works will be a complete aërial tramway system. The next step in the construction will be the building of a 50,000 ton drydock 750 feet long by 90 feet wide.

Has Contract for 8 Ships

The company has contracts from the United States Shipping Board Emergency Fleet Corporation for the construction of eight steel vessels. It is expected to have the keels of four of them laid by July or August. Each of the eight ships contracted for will have a dead weight of 8800 tons and will be 420 feet in length with a 56 foot beam, and will cost in excess of $1,500,000. By the terms of the company's agreement with the Board the first and second ships are to be delivered in April of next year, the third and fourth ships in May, the fifth and sixth in September and seventh and eighth in October. It is expected that the company will have 1000 men in its employ by July and at least 3000 when construction is well under way. Mr. Fred. L. Baker, head of the Baker Iron Works, is the President and Treasurer of the company. Mr. Fred. A. Gardner will be the Superintendent and Chief Engineer.

Asks for $1,000,000 for Submarine Base at Panama

Secretary Baker has sent a communication to the House, asking for an extra appropriation of $902,625 for the new submarine base at Coco Solo Point, Panama, Canal Zone. The original appropriation carried in this year's sundry civil bill was $750,000.

Portland To Build More Docks

On June 4 Portland, Ore., voted to issue $3,000,000 in bonds for the purpose of improving the port. The Dock Commission's plan is to construct a first unit bulk elevator of a capacity of 1,000,000 bushels and in connection with the handling of grain, a dock or warehouse approximately 1000 feet long and about 175 feet wide. The proposed layout provides for pier and slip construction and this will include the facilities mentioned above and also a large open dock area to be used for handling bulk material such as lumber, rails, structural steel and other commodities which do not, as a rule, require shedded space.

It is expected that the immediate construction, including the cost of the site will be in the neighborhood of $2,000,000—the remaining $1,000,000 of the bond issue to be held in reserve for such future requirements as may be demanded by shipping.

Engineers Organize in Baltimore To Develop Palestine

A number of civil, mechanical and electrical engineers who are delegates to the convention of the Federation of American Zionists which is meeting in Baltimore this week organized the Zionist Society of Engineers for the purpose of lending their technical ability to the work of developing Palestine along national lines. They chose Max A. Greenberg, mechanical engineer, Chairman, and Perez W. Etkes, civil engineer of the Public Service Commission of New York, Treasurer and Secretary. The Executive Committee consists of the Chairman and Secretary, and A. P. Joseph, electrical engineer, department head of the Westinghouse Company of Pittsburgh; B. M. Halpern, electrical engineer, Newark, N. J.; Emanuel N. Mohl, Brooklyn, N. Y., and B. H. Hirschenson, mechanical engineer of the Bureau of Standards, Washington. The engineers will establish a bureau of information and offices at 44 East Twenty-third Street, New York City.

President Nominates Men for Navy Engineer Corps

Existing Vacancies Filled from List of Successful Candidates at Recent Examination

President Wilson has sent to the Senate 25 nominations to fill existing vacancies in the grade of assistant civil engineer, Corps of Civil Engineers, United States Navy.

The nominees were the successful candidates in the final examination held recently in Washington, open to the 190 candidates who had passed the preliminary examinations and who represented 47 colleges and 29 states. Of this number, 62 candidates passed the preliminary examination and 53 presented themselves for the final examination, of whom 16 failed to qualify physically. Thirty-seven took the written examination, and out of this number 25 qualified and have been nominated for appointment as assistant civil engineers, with the rank of lieutenant (junior grade). The 25 men nominated represent 14 colleges and come from 9 states.

The examination was open to men under 26 years of age who had received an engineering degree from a college or university of recognized standing and who had had no less than 18 months' practical professional experience since graduation. The nominees are:

Name	Legal Residence	College or University
Cuthbert P. Conrad	Wisconsin	University of Wisconsin
Roy E. McCorkindale	Massachusetts	Rensselaer Polytechnic Institute
Ben Morcel	Missouri	Washington University
Robert L. Pettigrew	Wisconsin	Montana State College
Carl A. Trexel	Iowa	State University of Iowa
Kendal B. Bragg	Ohio	University of Wisconsin
Thomas J. Shack	New York	Massachusetts Institute of Technology
Alden K. Fogg	Illinois	University of Illinois
Arthur F. Peaslee	Massachusetts	Massachusetts Institute of Technology
Robert E. Thomas	Illinois	University of Illinois
Edward C. Seibert	Maryland	Lehigh University
Walter N. Moore	Missouri	University of Kansas
George W. Plaisted	Massachusetts	Worcester Polytechnic Institute
Arthur H. Bond	Massachusetts	Massachusetts Institute of Technology
Joseph J. Strachan	New York	Massachusetts Institute of Technology
Hector C. Griswold	New York	Rensselaer Polytechnic Institute
William H. Smith	Massachusetts	Massachusetts Institute of Technology
Henry G. Lehrbach	New York	Cornell University
Thomas E. Dunham	New York	Rensselaer Polytechnic Institute
Henry Niemann	Massachusetts	Massachusetts Institute of Technology
James L. McDonald	New York	New York University
Robert S. Johnson	Iowa	Iowa State College
Edward L. Marshall	Massachusetts	Tufts College
Richard H. Gifford	Delaware	Lehigh University
George D. Wetsel	New York	Rensselaer Polytechnic Institute

Here Are the 16 Contractors Who Will Build the National Army Cantonments

Name of Firm	Location of Camp
Bates & Rogers Construction Co., Chicago	Rockford, Ill.
Thompson Starrett Co., N. Y.	Yaphank, L. I., N. Y.
Smith, Hauser & MacIsaac, N. Y.	Annapolis Junction, Md.
Rinehart & Dennis, Charlottesville, Va.	Petersburg, Va.
F. T. Ley & Co., Springfield, Mass.	Ayer, Mass.
Erwin & Leighton, Phila.	Wrightstown, N. J.
Hardaway Contracting Co., Columbus, Ga.	Columbia, S. C.
Arthur Tufts, Atlanta, Ga.	Atlanta, Ga.
A. Bentley Sons Co., Toledo, Ohio	Chillicothe, Ohio.
Mason & Hanger, Lexington and Richmond, Ky.	Louisville, Ky.
Porter Bros., Portland, Ore.	Battle Creek, Mich.
Charles Weitz Sons, Des Moines, Ia.	Des Moines, Ia.
George A. Fuller Co., N. Y.	Fort Riley, Kan.
Stone & Webster, Boston	Fort Sam Houston, Tex.
Hurley & Mason, Tacoma, Wash.	American Lake, Wash.
James Stewart & Co., N. Y. and St. Louis	Little Rock, Ark.

Goethals Engages Five Former Associates As Aids

Orders for Ten Steel And Four Wooden Ships Given—Marine Engines Are Building

Washington, D. C., June 24—Since discharging his two assistants, Clark and Eustis, Gen. George W. Goethals has added to the staff of the Emergency Fleet Corporation many of his former engineering associates on the Panama canal. Admiral H. H. Rousseau, who was engineer of terminal construction at Panama, was taken from the Bureau of Yards and Docks, where he was serving on the committee locating naval and coaling stations, to become his direct assistant. Major R. E. Wood, who served in Panama as chief quartermaster; F. A. Brown, who was chief inspector of materials; A. L. Bell, formerly mechanical engineer; W. R. McCann, former assistant electrical engineer, are all occupying similar positions in the Emergency Fleet Corporation.

Contracts for ten complete steel merchant ships; four complete wooden merchant vessels, and twenty wood ship hulls were announced June 25 by Major General Goethals, General Manager of the Emergency Fleet Corporation. Deliveries will be made in 1918.

The steel ships will be built by the Moore and Scott Iron Works at Oakland, Calif.; the complete wooden ships, by the Newcomb Lifeboat Company, Hampton, Va.; twelve wooden hulls by the Universal Shipbuilding Company, Harris County, Texas; four hulls by the Portland Ship Ceiling Company, Portland, Me., and four hulls by McBride & Law of Beaumont, Texas.

In addition to the ship contracts, orders for twelve vertical triple expansion marine engines were given to the Ellicott Machine Corporation of Baltimore.

In all, the Fleet Corporation has let contracts so far for 104 complete ships, 38 of steel; 32 of wood and steel, and 34 of wood. Seventy-two wooden hulls have also been ordered.

Hole Through Last of Lower East River Tunnels

Records for a Week's Progress Broken—a Lower Accident Rate Established

The last of the four east river tunnels under construction by New York City was completed on June 20 after making an unusual record for a low accident rate—only one fatality occurring in 800,000 individual decompressions. On one of these tunnels a progress of 95 ft. 4 in. was recorded for one week, comparing with a record of 88 ft. 10 in. for one of the other tunnels and with 82 ft. 6 in. made some years ago on one of the Pennsylvania R.R. tunnels. The best progress made in the tunnel for the old subway in one week was 67 ft. 10 in.

The final blast was fired by Oscar Strauss, chairman of the Public Service Commission, in the presence of D. L. Turner, chief engineer of the Commission, Robert Ridgway, chief engineer of subway construction, Clifford M. Holland, division engineer in charge of tunnel construction, several of the Public Service Commissioners, George H. Flinn and Major John F. O'Rourke of Flinn O'Rourke Co., Inc., who constructed the tunnels. For the contractor, the work in the four tunnels has been in charge of M. J. Quinn, general superintendent.

Government Places Large Order for Lumber Requirements

The Government has chosen the Southern Pine Emergency Bureau, mention of the formation of which was made in the issue of June 21, to furnish nearly 100,000,000 ft. of lumber for army cantonments and shipbuilding. The cantonment requirements are 78,000,000 ft. for use at the Louisville, Fort Riley, Little Rock, San Antonio and Chillicothe sites. For ships, 17,500,000 was asked, for eight of the fourteen vessels into which it will go are to be built near here.

Navy Department Busy on Camp Construction

Secretary Daniels Announces Locations at Which Building Are Under Way or Contemplated

Naval training camps at Philadelphia and Charleston, S. C., at each of which 5000 men can be accommodated, and Pensacola, Fla., at which 1000 additional men can be taken care of, have been completed, according to an announcement issued this week by Secretary Daniels. Seven other camps on the Atlantic coast, three on the Pacific coast, and one at Chicago, are nearing completion and a majority of them will be ready for occupancy about July 1.

The seven additional Atlantic coast camps are located as follows: Newport, R. I.; Cape May, N. J.; Key West, Fla.; Hingham, Mass.; Port Royal, S. C.; Quantico, Va.; and New Orleans, La. Others, it is understood, will be built at Gulfport, Miss., and Boston.

Pacific coast camps will include those at Mare Island, Calif.; Puget Sound, Wash.; and San Diego, Calif.

The selection of the sites for these camps has been under the direction of Rear Admiral Palmer, chief of the bureau of navigation, and the work of construction has been conducted under the supervision of Rear Admiral Harris, chief of the bureau of yards and docks.

These new camps, when completed, will provide accommodations for approximately 80,000 men at a cost of $9,000,000.

Washington Counties Issue Bonds for Irrigation Additions

On Saturday, June 16, property owners in Benton and Yakima counties, Washington, under the Horse Heaven Irrigation District, voted $18,000,000 in bonds to complete the project. About 215,000 acres can be watered for $45 per acre or 300,000 acres including reservoirs, at $87 per acre. The first meeting of an advisory committee chosen at the election, will be held with the present board on July 3, at which time the rights of the Klickitat Irrigation & Power Company, the Northwestern Electric Company and Yearsley Interests along the Klickitat River will be purchased.

The engineers on the work are: R. H. Thomson, Alaska Bldg., Seattle; O. Laurgaard, Railway Exchange Bldg., Portland, and A. J. Wiley, Butte, Mont. Attorneys for the district are: Farrell, Kane & Stratton, American Bank Bldg., Seattle; McGregor & Fristoe, of Portland, Ore., and R. B. Williamson, of North Yakima, Wash. Some of the items of construction are as follows: 150 miles of main canal, $8,000,000; two power and pumping plants, $500,000; six laterals, $1,979,000. Apparently the $18,000,000 bond issue does not cover the cost of constructing seven reservoirs, originally contemplated under a $24,000,000 bond issue, as these structures were to cost $8,833,000.

Construction Record Made On Frisco Cantonment

Regular Army Camp Built by 600 Carpenters at Rate of 15 Buildings per Day

By the careful organization of every phase of the work, the building of the cantonment at the Presidio in San Francisco has been carried out in what is believed to be record time for this kind of work. Practically all the lumber companies of the city were represented in an emergency committee which succeeded in delivering 2,500,000 ft. b.m. of lumber in just the order desired within 84 working hours. This organization was paralleled by that of the contractor in marshaling the army of about 600 carpenters and helpers who constructed the 210 buildings complete within 18 working days.

Speed—15 Buildings per Day

During the period of maximum activity the speed was 15 buildings per day, or a new building every 33 minutes. The buildings are roofed with patent roofing and equipped with terra cotta chimneys incased in galvanized iron tops. The construction referred to includes the hanging of doors and windows and the electric wiring but does not include the plumbing in lavatories, which was sublet in separate contract.

The general layout of the camp consists of four parallel rows of buildings with a main street in the center and two streets on the outside. The mess and bunk houses are 20 ft. wide and from 95 to 120 ft. in length. The contract was held by G. M. Gest, of San Francisco, for whom Harrison S. Taft was construction manager.

Cleveland Engineering Society Gets 22,000 Volumes

At the annual meeting of the Cleveland Engineering Society, held June 15, the retiring president, F. W. Ballard, made announcement that the American Society of Civil Engineers had given in trust to the Cleveland Engineering Society through the local association of the members of the American Society of Civil Engineers, all of the books of its library duplicated by books in the United Engineering Society's library, amounting to about 22,000 volumes. The donation is the result of the efforts of G. H. Tinker, librarian of the Cleveland Society, and of Wilber J. Wharton, president of the Cleveland Association of the American Society of Civil Engineers.

At the same meeting honorary membership was conferred upon Ambrose Swasey and S. G. Wellman, both past presidents of the Cleveland Society. The occasion was the 37th annual meeting of the Society and the attendance was about 300. J. H. Herron, whose biography appears on a succeeding page, was inaugurated as president for the coming year.

Contract Let for New Flying Field in Illinois

The Signal Corps announced on June 22 the letting of the contract for the fourth of the new Government flying fields, to be built at Belleville, Ill., 23 miles from East St. Louis. It will be a standard two-squadron field, accommodating 300 student fliers, with the requisite number of officer instructors, mechanics, and enlisted men, and providing hangars for 72 training planes. Construction of the buildings and the preparation of the field will begin immediately.

The locations of the fields already announced are Dayton, Ohio; Mount Clemens, near Detroit, Mich.; and Rantoul, near Champaign, Ill. The Government's present plans contemplate letting the fifth contract in about two weeks and the remaining four of the nine fields already authorized at successive intervals of two weeks thereafter.

The preparation of the three fields already started has been made an emergency job, and the Chanute Field, at Rantoul, Ill., is already nearly half done. The contract for Chanute Field was let on May 24 and work began on May 27. Substantial progress has also been made on the big four-squadron Wilbur Wright Field at Dayton and the Selfridge Field at Mount Clemens, Detroit. The authorities hope to have men flying on all three of these fields by the middle of the summer.

Cuban Construction Active, Says Commerce Expert

New sugar mills, railway construction, port improvements and hotel building in Cuba, as a result of the large crop and high prices of sugar, will soon make that island an excellent market for American construction machinery and materials, according to Special Agent W. W. Ewing, of the Bureau of Foreign and Domestic Commerce.

A number of new sugar mills are projected for this season, and considerable railway construction and extension are being planned. The prosperity brought to the island by the unusual sugar crop will result, according to Mr. Ewing, in much heavier general traffic, which will require additional wharf and warehouse space. Sites have been acquired, and plans are being prepared for modern hotel buildings at a number of points to meet the demands of tourist travel. Many other indications of engineering activity are to be seen in all parts of the island.

The United States is in the best position to supply the materials needed for such improvements, according to Mr. Ewing's report, which is entitled "Markets for Construction Materials and Machinery in Cuba," special agents series No. 139, and which may be obtained in the usual way at any of the offices of the bureau or from the superintendent of documents at Washington.

National Guard Engineers Ordered Into Service

Companies from Fifteen States Will Do Preliminary Work on Cantonments

Orders have gone to the governors of 15 states to muster into the Federal service 16 companies of engineers of the National Guard, who will be assigned to do the preliminary engineering work on the 16 sites for cantonments for the National Army.

One company each has been ordered from Massachusetts, New York, Pennsylvania, South Carolina, Georgia, Ohio, Indiana, Michigan, Illinois, Mississippi, Iowa, Kansas, Texas, and California, and two companies from New Jersey.

These are the first companies of engineers to be called into service since the beginning of the war. The present work of each company will be to plot out the site chosen for the cantonment, to prepare preliminary plans showing the contractor where sewers, water pipes, roads, regimental camps, and all necessary buildings and other works are to be placed.

Second Engineer Regiment To Be Recruited to 1141 Men

Col. Curtis McD. Townsend, Commander of the Second Engineers' Reserve Regiment, being recruited in St. Louis, today received instructions from the War Department to raise the strength of the regiment 10 per cent., or 103 men, to make the total roster 1141 men. Colonel Townsend has 935 enlisted. He expects to take the men into camp at Waterworks Park this week.

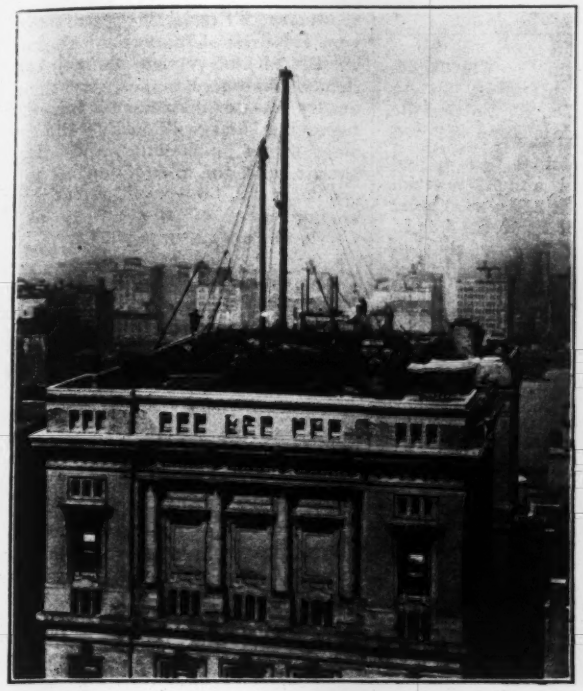
Harrison Shows Railroads Are Handling Heavier Tonnage

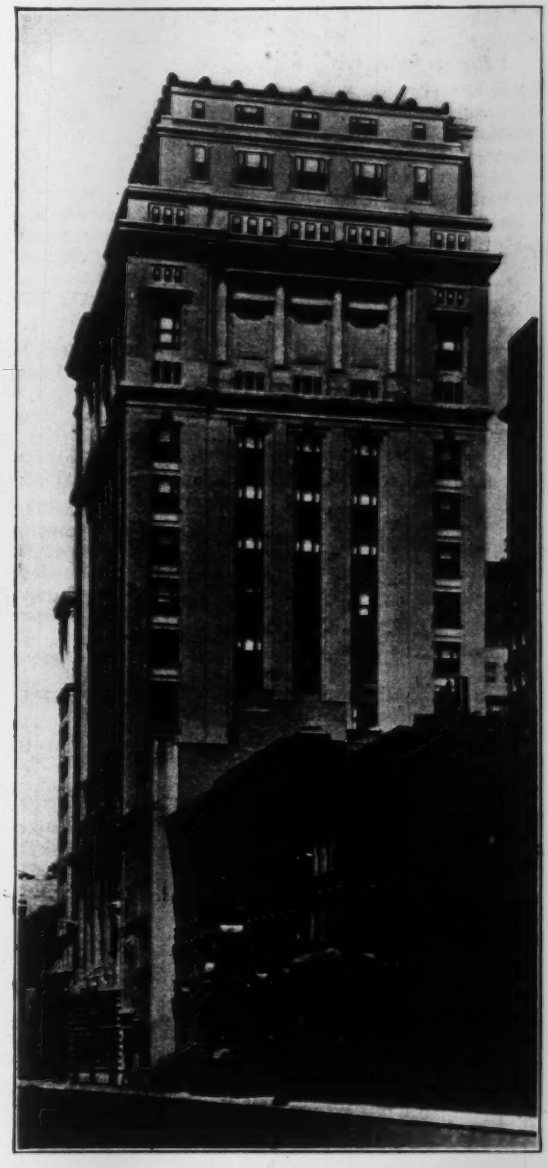
That real headway is being made in the effort to save the time of freight cars by quick and prompt loading and unloading is brought out in the figures given out by Fairfax Harrison, president of the Southern Ry. and chairman of the railroads' war board, which show that the daily average of cars loaded with bituminous coal each working day in May of this year was 28,449, an increase of 23.8 per cent. over May, 1916, and of 8.1 per cent. over April, 1917.

According to the Government figures now compiled, the 62 principal bituminous-coal-carrying railroads in May, 1917, hauled 142,157 more carloads of coal—approximately 7,100,000 tons—than they did in May, 1916. This was an increase of 23.8 per cent. The railroads hauled 739,674 carloads of bituminous coal in May of this year, compared with 597,517 cars in May, 1916.

In the month of May, while this greatly increased tonnage of bituminous coal was being handled, the railroads reduced the so-called car shortage from 148,627 on May 1 to 105,127 cars, almost one-third.

Engineering Societies Building Nearly Completed





The structural work of adding three stories to the Engineering Societies Building on 39th St., New York City, to provide necessary space for the American Society of Civil Engineers, is nearly completed and it is hoped that the new space can be occupied in the early fall. The work consists in building four new columns through the old frame and carrying the new stories on heavy trusses spanning the columns. As shown in the right-hand view, the addition has a tower effect, common to some of the newer types of New York skyscrapers, and fits in very well with the architectural design of the old building. The architect is H. G. Morse; the structural engineers, Purdy & Henderson, and the contractor, the Wells Construction Company.

Forestry Regiment Recruiting Now Under Way

As announced in the issue of May 24, p. 427, a forestry regiment will accompany the corps of engineers to France to help in the economical use of French timber. Recruiting for this unit is now under way and men wishing to enlist in this branch of the service should apply to the nearest of the following listing offices:

F. H. Colby, forest commissioner, Augusta, Maine; J. S. Benedict, United States Forest Service, Gorham, N. H.; E. C. Hirst, state forester, Concord, N. H.; Harris A. Reynolds, 4 Joy St., Boston, Mass.; W. O. Filley, state forester, New Haven, Conn.; C. R. Pettis, superintendent of state forests, Albany, N. Y.; J. S. Illick, Pennsylvania Department of Forestry, State Forest Academy, Mount Alto, Penn.; F. W. Besley, state forester, Johns Hopkins University, Baltimore, Md.; H. L. Johnson, United States Forest Service, Elkins, W. Va.; S. H. Marsh, United States Forest Service, Harrisonburg, Va.; Verne Rhoades, United States Forest Service, Asheville, N. C.; H. G. Spahr, United States Forest Service, Blue Ridge, Ga.; E. P. Bushnell, United States Forest Service, Johnson City, Tenn.; Edmund Secrest, state forester, Wooster, Ohio; T. B. Wyman, Munising, Mich.; W. T. Cox, state forester, St. Paul, Minn.; G. E. Marshall, United States Forest Service, Cass Lake, Minn.; F. B. Moody, conservation commissioner, Madison, Wis.; J. H. Foster, state forester, College Station, Tex.; the Forester, United States Forest Service, Washington, D. C.; district forester, United States Forest Service, Federal Building, Missoula, Mont.; district forester, United States Forest Service, New Federal Building, Denver, Colo.; district forester, United States Forest Service, Gas and Electric Building, Albuquerque, N. M.; district forester, United States Forest Service, Forest Service Building, Ogden, Utah; district forester, United States Forest Service, 114 Sansome St., San Francisco, Calif.; district forester, United States Forest Service, Beck Building, Portland, Oregon.

The listing of applicants by the foregoing officers does not insure their final acceptance, but is necessarily the preliminary step to be taken.

Engineers on Cantonment Construction Are Named

Will Have Title of Constructing Quartermaster—Many Are Chosen from Civil Life

Actual construction work at each of the 16 cantonments to be erected for the new National Army will be in charge of an officer of the Quartermaster Corps, either Regular or Reserve, to be known as the constructing quartermaster.

Under him will be an assistant quartermaster.

The constructing quartermaster will be in full charge at each cantonment, directing the laying out of the buildings and supervising for the Government the entire work of construction as carried on by the contractor.

The personnel of the constructing quartermasters includes a number of well-known civilian engineers who have been given major's commissions in the Quartermasters' Reserves Corps. In addition several officers of the Regular Army Quartermasters' Corps are acting in executive capacity.

Men Appointed from Civil Life

Among the men appointed from civil life are: Maj. O'Kelly Williams Myers, an engineer of the New York water department, who will be in charge at Yaphank, L. I.; Maj. Ralph Fenne Proctor, chief engineer of a Baltimore bonding company, who has been assigned to the cantonment at Annapolis Junction, Md.; Maj. William Couper, an engineer for the Pennsylvania R.R., who will be at Columbia, S. C.; Maj. James Norman Pease, principal assistant engineer of the Lockwood-Green Construction Co., of Columbus, Ga., who will be at the head of operations at Atlanta; Maj. Frank Elmer Lamphere, assistant engineer of the Baltimore & Ohio Co. at Chicago, assigned to Louisville, Ky.; Maj. Earle Bell Morden, a St. Paul railroad engineer, who will be at Battle Creek, Mich.; Maj. Donald Hubbard Sawyer, of Spokane, Wash., to be in charge at Rockford, Ill.; Maj. John R. Fordyce, a civil engineer of Little Rock, Ark., who will supervise the construction of the cantonment in that city; Maj. Millard Angle Butler, a St. Paul railroad engineer, to be in charge at Des Moines.

Regular Army officers named as constructing quartermasters are: Capt. Edward Canfield, Jr., Ayer, Mass.; Maj. Harry C. Williams, Wrightstown, N. J.; Capt. Frank B. Edwards, Petersburg, Va.; Capt. Ward Dabney, Chillicothe, Ohio; Capt. Frank J. Horman, Fort Riley, Kan.; Capt. George E. Thorne, Fort Sam Houston, Tex.; and Capt. David L. Stone, American Lake, Wash.

The following officers have been named as assistant quartermasters: Capt. Graham Parker, Annapolis Junction; Capt. Thomas W. Holliday, Columbia, S. C.; Capt. Mark L. Ireland, Louisville; Capt. Manuel N. Garrett, Battle Creek; Capt. Owen G. Collins, Rockford; Capt. Joseph C. Kay, Des Moines.

Engineering Societies

The Brooklyn Engineers Club made an excursion to the plant of the Atlantic Terra Cotta Co., at Tottenville, Staten Island, Saturday, June 23.

The National Municipal League will hold its twenty-third annual meeting in Detroit, Mich., Nov. 21 to 24, having headquarters at Hotel Statler. For information concerning this meeting address the secretary, Clinton Rogers Woodruff, 703 North American Building, Philadelphia.

The Steel Treating Research Club of America, having had its offer of service to the Government accepted, desires that its members communicate with headquarters in Detroit, stating the exact character of work which they are best qualified to take charge of.

The Pacific Northwest Society of Engineers met June 16 in the Chamber of Commerce, Seattle, to hear a paper by H. E. Fowler, assistant superintendent of buildings, Seattle, on "Tests of Flat Slabs in American Can Co.'s Building." Charles V. E. Dove read a paper on "An Automatic Stoker."

Engineering Schools

The University of Wisconsin announces that the nineteenth annual summer session of the College of Engineering will be held at Madison during the six weeks' period beginning June 25, 1917. Special courses will be given in chemistry, electrical, steam and hydraulic engineering, gas engines, machine design, mechanical drawing, mechanics, shop work and surveying. All courses given in the summer session are open to engineering students. Special courses have been arranged for enginering, manual arts and vocational teachers.

The Massachusetts Institute of Technology has started nine special courses of study for military or naval purposes, as follows: Early work on internal-combustion engines; an intensive course in naval architecture; the "cram" courses for students wishing to take army engineering examinations; special aëronautical courses; special 12 weeks' summer military camp at Camp Cunningham; courses for first-officer examination, a school which is being conducted by Technology in different places on the coast for the convenience of local groups of seamen; special junior military school in the Tech Building in Cambridge; and special courses for naval-officer examinations.

The College of the City of New York announces a course of 15 two-hour lectures and seven field series especially planned for the members of those military units in which a knowledge of map making, topographic sketching, use of surveying and mapping instruments is necessary. The lectures will cover in very close detail the various methods of horizontal and vertical control, estimations of distances, slopes, elevations and grades, uses of instruments for military surveying, and will outline the fundamentals of sketching and traverse boards, and the planetable. The field problems will be worked out at the surveying camp of the college at Van Cortland Park, New York City.

Personal Notes

Mark G. Cohn, who has been chief deputy in the Building Department of Los Angeles, Calif., has accepted the position of director of the California State Housing and Immigration Commission.

Thomas Maddock has been appointed to the office of state engineer of Arizona.

J. R. McDermott, who acted as road inspector in Trumbull County, Ohio, is now field inspector with the Portland Cement Association, with headquarters at Pittsburgh.

John W. Bulger is now connected with the county engineering office of Coshocton County, Ohio, of which **A. H. Shaw** is in charge.

Erich A. Mees, for more than five years engineer and superintendent of construction with Tucker & Laxton, Inc., contracting engineers, Charlotte, N. C., has resigned his position with the above firm to enter into a partnership with his brother, **Curtis A. Mees,** consulting engineer. Mr. Mees will have his office at 310 Trust Building, Charlotte.

R. E. Ezell, who has been with the Southern Ry. for the last 19 years, recently resigned as principal assistant civil engineer of that railway and retired from professional service.

Alex G. Hoffman, formerly with the valuation department of the Pennsylvania R.R., is at present with the Schuylkill Bridge Works at Pottstown, Pennsylvania.

S. B. Newman and **M. F. Cavallon,** both of whom were formerly connected with the Masters Builders Co., have formed a new partnership under the name of the Newman-Cavallon Co., with offices at 8 West 40th St., New York City. The products of this concern will be similar in general character to those which both Mr. Newman and Mr. Cavallon have been handling for the last several years.

Samuel Insull, president, Commonwealth Edison Co., Chicago, was given the degree of doctor of science, honoris

causa, at the one hundred and twenty-fifth commencement exercises of Union College, Schenectady.

Robert **L. Fox**, formerly city engineer of Batavia, N. Y., has accepted a position as assistant engineer on the construction of the sanitary sewer system at Johnstown, Pennsylvania.

Will **Rights**, of Purdue University, has been selected assistant engineer to the State Highway Commission of Indiana and will act as secretary to the commission until the state engineer is appointed.

S. T. Cantrell, superintendent, Baltimore & Ohio R.R., with headquarters at Philadelphia, has been granted a leave of absence during his time of service with the Government on railroad work in Russia. **R. B. White**, superintendent, Seymour, Ind., will be transferred to Philadelphia.

W. I. Risley has been granted a six months' leave of absence from his duties as city engineer of Ventnor City, N. J., to receive training with the Engineer Officers' Reserve Corps. **Eugene Somers**, who prior to 1912 was principal assistant to the county engineer, Atlantic County, N. J., and for the past two years assistant engineer in the Engineering Department of Woonsocket, R. I., has been designated acting city engineer for the period of Mr. Risley's absence.

E. C. Koppen, formerly on the Carlsbad project at Carlsbad, N. M., has been appointed assistant engineer, United States Reclamation Service, with headquarters at Klamath Falls, Oregon.

M. H. Montross is at present with the New York State Conservation Commission, under **Alex Wright McKim**, inspector of docks and dams, with headquarters in Buffalo.

M. H. Doyne, who has been in charge of extensive railroad surveys of East St. Louis and vicinity, has been sent to Oklahoma City as resident engineer for C. E. Smith, consulting engineer, St. Louis, in charge of the construction of the Oklahoma Belt Ry. At one time Mr. Doyne was connected with the Public Service Commission of New York on the designs of the subway system of that city.

E. H. Jones, who for the past three years has been located in California in private practice, and as junior engineer with the Los Angeles County Flood Control District, has returned to Colorado and is now in his former position as district engineer for the North Sterling Irrigation District, Sterling, Colorado.

George C. Kenney has resigned as president of the Beaver Contracting and Engineering Corporation, Boston, Mass., to enter the army. **Paul C. Ordway**, secretary of the same company, has likewise resigned to enter the navy. **L. Gordon Glazier** becomes president and treasurer. The offices of the company have been removed from State St. to 57 Cummings Road.

Horace B. Olmsted has been appointed superintendent of highways and bridges in the town of Darien, Conn., having been previously assistant engineer for the Connecticut State Highway Commission with headquarters at New Haven.

Major P. W. Davidson, disbursing officer of the Alaska Railroad Commission and inspector in chief of the National Guard of Alaska, recently transferred the headquarters of the Alaska Railroad Commission to Juneau, from Valdez, Alaska.

Marvin Chase was recently appointed hydraulic engineer for the State of Washington. This position was created by the Water Code passed at the last session of the state legislature. Mr. Chase has been for 30 years a hydraulic engineer, and for the past 25 years has been connected with irrigation projects. In 1901 he superintended the old Sunnyside canal, then owned by the Washington Irrigation Co. He resigned that year and associated himself with W. T. Clarke in enlarging the old Selah canal, later going to Billings, Mont., to install an irrigation canal. Mr. Chase is a past president of the Pacific Northwest Society of Engineers.

O. E. Eltinge, chief draftsman, sewer division, Kansas City department of engineering, has been granted a three months' leave of absence to accept a temporary position as second in charge of laying out training camps at Fort Riley, Kan., under Maj. H. H. Roberts, Corps of Engineers, U. S. Army.

Edmund B. Ulrich has been reëlected city engineer of the City of Reading, Pennsylvania.

C. R. Kulp, division engineer on the Chicago & North Western, at Antigo, Wis., has been appointed trainmaster at Benld, Ill., succeeding **F. R. Lloyd.**

E. J. Correll, district engineer maintenance-of-way of the southwestern district of the Baltimore & Ohio, with headquarters at Cincinnati, Ohio, and formerly division engineer of the Illinois division, has been appointed superintendent of the Delphos division of the Cincinnati, Hamilton & Dayton, with headquarters at Dayton, Ohio, succeeding **R. B. Mann.**

E. H. May, assistant division engineer of the Pennsylvania Lines, at Logansport, Ind., has been transferred to Fort Wayne, Ind., to succeed **H. T. Sympson.**

Christopher Johnson has been appointed city engineer of Warrensburg, Missouri.

Col. Samuel E. Tillman, who was retired in October, 1911, while serving as a professor at the United States Military Academy, has been recalled to active service and assigned to duty as superintendent of the Military Academy, relieving **Col. John Biddle**, Corps of Engineers, who has been placed temporarily in command of the 6th Regiment of Engineers. Colonel Tillman was graduated from the Military Academy in 1869, and served three years in the artillery and eight years in the engineers. In December, 1880, he was appointed an instructor at the academy and served in that capacity until his retirement in 1911.

F. S. Small is at present in charge of the revision of the original plans for the hydro-electric development at Cedars, Quebec, for Fraser, Brase & Co. Mr. Small was for 3½ years superintendent of construction for the Mond Nickel Co., Coniston, Ont., and then acting district engineer, in charge of the St. John River District, for the Canadian Department of Public Works.

J. M. Trevor, manager of the mixer department of the Chain Belt Co., Milwaukee, has been appointed New York manager of the company, representing the Rex line of concrete mixers. His office is at 30 Church Street.

A. W. Schorger, who for seven years has been connected with the Forest Products Laboratory, has resigned to take charge of organic chemistry with the C. F. Burgess Laboratories, at Madison, Wisconsin.

Arthur H. Blanchard, professor of highway engineering, at Columbia University, New York, has been retained as consulting engineer on the highway work of the New York City Board of Water Supply.

W. G. Mackendrick, president of the Warren Bituminous Paving Co., of Toronto, Ont., has been in France for the past two years building roads at the front. He was first captain in the Canadian Corps of Engineers and later a deputy assistant director of roads with charge of all roads in connection with the operation of the Fifth British Army in France, as major. He has recently been given the rank of lieutenant colonel with the same duties as before. Mr. Mackendrick has been in the business of road construction since 1890, when he was connected with the Warren-Scharf Asphalt Paving Company.

Prof. Arthur D. Winslow, head of the civil-engineering department at Norwich University, has recently been appointed city engineer of Montpelier, Vt. Professor Winslow has held positions with the Pennsylvania R.R., with the New York Board of Water-Supply on the Catskill project, and was for one year assistant engineer of the City of Everett, Massachusetts.

C. C. Cottrell, formerly connected with the California Highway Commission, has accepted a position as assistant highway engineer of Nevada and is

taking up headquarters in that state with Chief Engineer **R. K. West**, whose appointment was noted in these columns on June 7.

Harold G. McGee, sanitary engineer, Jackson, Mich., has resigned to become principal assistant to **L. A. Boulay**, Lucas County sanitary engineer, Toledo, Ohio. Previous to his engagement at Jackson, Mr. McGee was assistant engineer with the Ohio State Board of Health.

Theodore Tobish has been appointed engineer for Hamilton Township, Mercer County, N. J., and will serve as technical director for the extensive public improvements to be made there.

Harrington & Peters Co., general contractors, Seattle, Wash., have recently filed notice of dissolution of partnership. The firm was composed of **P. A. Harrington** and **E. G. Peters.** Each will continue in the contracting business under his own name, occupying separate offices in the Oriental Building, Seattle.

R. D. Goodrich, formerly manager of public utilities at Ypsilanti, Mich., has recently been appointed city engineer of Lansing, Mich. Mr. Goodrich has had about 15 years' experience in municipal and hydraulic work, being five years city engineer of Cheyenne, Wyo., during which time he designed and built a filter plant for that city and Fort D. A. Russell.

Arthur M. Torrey, formerly with W. B. Barstow & Co., Inc., has left that organization to reënter the employ of Hildreth & Co., inspection engineers, New York City, with which firm he was connected for several years prior to joining the Barstow company.

K. O. Truell, formerly connected with the Buffalo Potash and Cement Corporation as field engineer on construction, is now mechanical engineer on research at Niagara Falls for the Aluminum Co. of America.

O. L. Lockwood, formerly assistant engineer in the construction department of the Southern Ry., is now in charge of engineering and development work in connection with new coal mines being opened at Parish, Ala., for the exclusive use of the Southern Railway Company.

A. W. D. Hall, city engineer, Jackson, Mich., has been made city manager, succeeding **Gaylord Cummin**, who resigned to become city manager of Grand Rapids, as noted in these columns May 3.

Lawford Grant has been promoted to the position of managing director and treasurer of the Eugene F. Phillips Electrical Works, Ltd., Montreal, succeeding **George H. Olney**, who has been the head of that firm for 18 years. Mr. Grant was formerly engineer for the British Insulated & Helsby Cables, Ltd., of England. Among the undertakings carried out for this latter company by Mr. Grant was the electrification of the Government dock yard and naval base at Malta.

J. L. Jacobs, while still continuing in his position of southern manager for James Stewart & Co., Inc., has just moved his headquarters to Newport News, Va., to take care of plant extensions for the Newport News Shipbuilding and Dry Dock Co., in connection with its contract with the Government for two battle cruisers and two battleships. The work involves the construction of two new sets of ways and an office building.

C. H. Deaton, formerly chief engineer of the Yukon-Pocahontas Coal Co., is now in a similar position with the Leckie Collieries Co., Aflex, Ky., having charge of those things which pertain to the welfare of the employees of the company. This is a new departure and a tendency toward bettering the condition for the miner and improving the understanding between the operator and the employee.

R. E. Boyce has returned to Camden, N. J., as resident engineer of sewer construction on work which was not completed last fall due to labor shortage.

Walter L. Watson, formerly resident engineer for J. F. Witmer Co., at Ironton, Ohio, is superintendent for the Gaylord Construction and Engineering Co., Scranton, Penn., in the installation of a water system and reservoir for Indianapolis.

J. G. Kaulfuss, at various times with the Wisconsin State Highway Commission, the Highway Commission of Maine, instructor in engineering at the University of Maine and connected for a short time with the Office of Public Roads, has been appointed field man and publicity agent for the North Dakota State Highway Commission.

Obituary

James M. Courtright, who was prominently identified with the building of the Canada Southern Ry., died recently at his home in Inwood.

James Warren, who was civil engineer and land surveyor for the County of Halton and the County of Bruce, died recently at Walkerton, Ont. For over 30 years Mr. Warren was in the employ of the Dominion Government on survey work.

George A. Stewart, for many years chief engineer of the Midland Ry., who built many of the largest bridges on that system, died recently at Victoria, British Columbia.

James Mason Crafts, president of the Massachusetts Institute of Technology from 1898 to 1900, died June 19 in Ridgefield, Conn. Having served two years as professor of chemistry at Cornell, Mr. Crafts became head of the department of chemistry at the Institute and was identified with it as a leader in research work in this country and abroad.

Charles S. Hall, engineer of track elevations, Chicago & Northwestern Ry., died June 15 at the age of 60. Mr. Hall graduated from the Iowa State University and had served 28 years in the engineering department of the Northwestern Ry. and 6 years with the Great Western Railway.

Sir Alexander Richardson Binnie died May 18, at Beer, Devon, England, at the age of 78 years. Sir Alexander received his early education in the private schools and then served a regular term of pupilage under Terence Wolfe Flannagan and John Frederic LaTrobe Bateman. From 1862 to 1866 he was engaged in various works for the Welsh railways; for part of this time acting as assistant engineer on the Mid-Wales Lines under John Watson and Richard Smallman, and was also employed on the Neath & Breton Ry. under J. G. McKenzie, and on the extension of the Pembroke & Tenby Ry. under John Mathias. Having practiced for a few years as a consulting engineer, in January, 1868, he was appointed to the Public Works Department and proceeded to India as executive engineer in railway service and in the preparation of projects for the supply of water to several stations. In 1871 he was made assistant to the chief engineer. Returning to England in 1875, he held the position of water engineer at Bradford for 15 years. In 1890 he became chief engineer to the London County Council, which position he held down to 1901. During this period he made an investigation and reported on the project of supplying London with water drawn from North Wales, comparing this supply with that taken from the River Thames. During this same period the sewage-disposal works at Barking and Crossness were completed and the Barking Road bridge over the River Lea was built. He was responsible also for the construction of the Blackwall vehicular tunnel under the River Thames. He was elected an associate member of the Institution of Civil Engineers in February, 1865, and a full member in May, 1873. He was president of the institution in 1905, and received on different occasions the Telford Medal, the George Stephenson Medal and the Telford Premium. He was also a member of the Institution of Mechanical Engineers.

Donald Grant, who for 12 years was a partner of Foley Brothers, railroad contractors, of St. Paul, died suddenly June 14. Mr. Grant was born in Glengarry, Canada, in 1837, and came to Minnesota in 1868 to engage in railroad-construction work on the Chicago, Milwaukee & St. Paul. He also built many miles of the Soo, Great Northern, Northern Pacific, Wisconsin Central, Minneapolis & St. Louis, and the Canadian Pacific.

PRICES and CONTRACTING NEWS

Of Special Interest to Engineers, Contractors, Builders and Manufacturers of Engineering and Building Supplies

IRON AND STEEL

Pig Iron—Below are the present quotations, with a comparison of a month and a year ago:

	Mar. 29, 1917	One Month Ago	One Year Ago
CINCINNATI			
No. 2 Southern foundry	$32.90	$27.40	$18.40@18.90
No. 2 Northern foundry	37.26	34.26	20.26
NEW YORK			
No. 2X Northern foundry	40.70	32.00@32.50	20.50@20.75
No. 2 plain Northern foundry	39.20	31.00@31.50	20.00@20.50
No. 2 Southern foundry†	34.25	29.00@30.00	20.25@20.50
BIRMINGHAM

RAILWAYS—STEAM AND ELECTRIC

Proposed Work

New Jersey—Pennsylvania R.R. making surveys double tracking line from Merchantville, to Pemberton. A. C. Shand, Broad St. Station, Phila., Ch. Engr.

Pennsylvania—Altoona & Logan Valley Electric Ry., controlled by American Railways, 1321 Walnut St., Phila., plans to extend line 1½ mi. during summer. S. S. Crane, First National Bank Bldg., Altoona, Gen. Mgr.

Pennsylvania—Johnstown Traction Co. applied to Johnson City Council for franchise to build 2 lines, 1 in 7th Ward and 1 in 17th Ward in exchange for which company will give city 50 acres land for park improvements. E. M. Du Pont, Central Ave., Johnstown, Pres. and Pur. Agt.

Pennsylvania—Montgomery Transit Co. applied for franchise to construct trolley line between Pennsburg, East Greenville and Red Hill. Line will run from East Greenville to Lederach, where it will connect with Norristown-Harleysville Line, thence through Salfordville, Woxall, Sumneytown, Green Lane and Hoppenville. I. B. Kline, 11 East Airy St., Norristown, Supt. and Pur. Agt.

Pennsylvania—Pennsylvania R.R. plans to build cut-off from point above Natrona to Glassmere, along Allegheny River, double-track about 5 mi. A. C. Shand, Broad St. Station, Phila., Ch. Engr.

Pennsylvania—Wm. S. Buckland, Allentown, plans rebuilding Quakertown & Delaware Valley RR., formerly Quakertown & Eastern R.R., operating line from Quakertown to Riegelsville, about 14 mi., in northern section Bucks County. Plans include bridge across Delaware River at Riegelsville.

Pennsylvania—Reading Transit and Light Co., Reading will reballast line from Womelsdorf to Wyomissing, with tracklaying and other improvements. Company will spend about $150,000. S. E. Smith, 12 South 5th St., Reading, Supt. Rys.

Maryland—Baltimore & Ohio R.R. plans branch line from Baltimore to Sparrows Point, about 8 mi. R. N. Begien, Baltimore, Ch. Engr.

West Virginia—H. L. Van Sickler and W. S. Coursey, Lewisburg, purchased Lewisburg & Ronceverte Railway Co. and will improve same.

West Virginia—Atlantic & Northwestern Ry., recently incorporated with $5,000,000 capital stock, plans line from Harpers Ferry to Newport News, Va., about 200 mi.; line in time may be extended to Morgantown, about 150 mi. B. F. Mays, 3459 Holmead Pl., Wash., D. C., Secy. and Treas.

West Virginia—Coal and Coke Ry. plans line from Adrian to Buckhannon, 3-mi. and other improvements. About $3,000,000. I. K. Dye, Elkins, Gen. Mgr.

North Carolina—E. W. Eubanks and R. C. Clarke, Hendersonville, and associates, interested in project to build 16-mi. railway from Hendersonville, N. C. to Riverview, S. C., (Cleveland post office), to connect with Greenville & Western Ry.

North Carolina—C. L. Payne, Asheville, interested in project to build 40-mi. railway to connect Asheville with Carolina, Clinchfield & Ohio Ry. at point near Kona.

North Carolina—(Official)—Southern Railway System soon lets contract new facilities in Selma, involving 6 yard tracks, each 100 cars capacity; 300-ton steel mechanical coal-handling plant, serving 1 engine track and main line; 2 cinder conveyors; engine storage, standing, and approach tracks; repair tracks for 34 cars with paint, carpenter, and blacksmiths' shops; water and compressed-air facilities; pens for watering and feeding stock in transit; new track scale, moving freight depot and relocation of main line, connecting and industrial tracks to accommodate situation of new yard. W. H. Wells, 1300 Pennsylvania Ave., Wash., D. C., Ch. Engr. Construct.

Georgia—Atlanta, Birmingham & Atlantic Ry. plans to spend $100,000 for improvements on property recently purchased at Waycross. B. L. Bugg, Atlanta, Gen. Mgr.

Georgia—Federal Construction Co. has resumed its plan of building line from Atlanta to Canton, for which franchise was secured 2 years ago but work suspended. Napier, Wright & Wood, Atlanta National Bank, Atlanta, Atty.

Georgia—Washington & Lincolnton R.R. making surveys extending line from Lovelace to Lincolnton, about 8 mi. M. Mason, Washington, Gen. Mgr.

Alabama—G. B. Tarrant, 1316 North 31st St., Birmingham, and associates, interested in project to build electric railway from Birmingham and Jasper, about 35 mi. G. H. Clarke, Engr.

Tennessee—J. H. Faucette, Mayor, Bristol, is interested in proposed construction of branch railway from point on Virginia & Southern Ry. (part of Southern Railway System) between Bristol and Kingsport via Moccasin Gap. W. H. Wells, 1300 Pennsylvania Ave., Wash., D. C., Ch. Engr. Constr.

Tennessee—Illinois Central R.R. and Yazoo & Mississippi Valley R.R. plan to spend $10,000,000 during summer to repair main lines in Tennessee and other Southern States. A. S. Baldwin, 135 East 11th Pl., Chicago, Ch. Engr., former company and M. B. Morgan, Memphis, Dist. Engr. of latter.

Ohio—Cincinnati, Milford & Loveland Traction Co. plans extending line from Woodland Park to Hillsboro or Columbus during summer. J. Montgomery, Madisonville, Gen. Supt.

Ohio—Cleveland, Cincinnati, Chicago & St. Louis Ry. plans double tracking roadway from Marion to Bellefontaine. C. A. Paquette, Cincinnati, Ch. Engr.

Ohio—Cleveland Ry., Leader-News Bldg., Cleveland, applied to City Council permission to make improvements, including track renewals, etc. About $4,500,000. G. L. Radcliffe, Leader-News Bldg., Cleveland, Gen. Mgr.

Indiana—Illinois Central R.R. plans to spend $200,000 on improvements in Sullivan during summer, including lowering of tracks under Chicago & Eastern Illinois R.R. tracks at crossings of roads, straightening tracks through city, and grading Patton Hill. A. S. Baldwin, 135 East 11th Pl., Chicago, Ch. Engr.

Indiana—W. J. Davis, Ch. Engr., Tipton-Frankfort Traction Co., reported interested in project to build railway from Fruitdale to Brownstown, via Nashville.

Indiana—Terre Haute, Indianapolis & Eastern Traction Co. (Terre Haute Div.) asked Bd. Pub. Wks., Indianapolis, for permission to lay additional track from Holmes Ave., northwest over company's right-of-way to Indianapolis Motor Speedway. T. F. Grover, 663 Wabash Ave., Terre Haute, Gen. Mgr., Terre Haute Div.

Michigan—Pennsylvania Lines West of Pittsburgh will receive bids within 60 days for line from Carlton to Detroit. T. Rodd, Pennsylvania Station, Pittsburgh, Ch. Engr.

Illinois—J. H. Shirley, 4139 Manhattan Ave., St. Louis, Mo., interested in plan to build electric railway from Chicago to St. Louis, through Decatur, Clinton, Farmer City, Bellflower, Saybrook and Anchor City. Company will be organized with $50,000 capital stock.

Illinois—Chicago & Alton R.R. plans double-tracking line through Pike County during summer. H. T. Douglas, Jr., Transportation Bldg., Chicago, Ch. Engr.

Iowa—Chicago & Northwestern Ry. making plans double-tracking line from Sioux City to Chicago, Ill. and Omaha, Neb. W. H. Finley, Jackson Blvd. and Franklin St., Chicago, Ch. Engr.

Minnesota—Great Northern Ry. purchased 10 acres land in Breckenridge and will build yards. A. H. Hogeland, St. Paul, Ch. Engr.

North Dakota—Dickinson & Northwestern Ry., recently incorporated, will build 40-mi. railway from Dickinson, Stark County, to Gorham, Billings County, through farming communities. General offices, shops, etc., will be built in Dickinson. L. A. Thorsen and J. Evoniuk, Gorham, interested.

Texas—H. L. Moseley, Atty., Weatherford, interested in project to build steam railway from Gainesville to Weatherford, about 100 mi.

Texas—R. S. Sterling, Houston, granted charter to build steam line from Goose Creek oil fields to Dayton, about 22 mi., to connect with Trinity Valley & Northern R.R.

Texas—Oklahoma & Texas Southern Ry. soon lets contract line from Wichita Falls southward. J. Phillips, P. O. Box 671, Wichita Falls, Secy.

Texas—Texas Airline Interurban Ry., recently incorporated with $250,000 capital stock, plans to build and operate interurban railway, through state including line between Paris and Palaclos, 385 mi.; within and between Beaumont and Corpus Christi, 475 mi.; within and between Eagle Lake and Austin, 90 mi.; within and between Navasota and Victoria, 165 mi.; through and between Houston and San Antonio, 200 mi. J. D. Hunt, Caldwell, H. H. Hunt, Columbus, W. T. Tait, Columbus, and W. W. Hunt, Waco, incorporators.

Oklahoma—Panhandle & Western R.R. incorporated with $300,000 capital stock, plans line from Hooker to Kenton, about 65 mi. V. V. Grant, and S. W. Walker, Miami, and C. Witt, Oklahoma, incorporators.

Nevada—Bullfrog Goldfield R.R., Tonopah, recently incorporated with $1,500,000 capital stock, plans railway from Goldfield to Bull Frog (Rhyolite post office) about 75 mi. F. A. Keith, W. L. Garden and A. C. Briggs, all of Tonopah and J. W. Brock, Bullitt Bldg., Phila., incorporators.

Washington—Oregon-Washington R.R. and Navigation Co. made surveys branch line from Starbuck to Pendleton, Ore., to lessen grade, involving 240,000 yds. to make fill. S. Murray, Wells Fargo Bldg., Portland, Ch. Engr.

Oregon—Hill Railway System making plans railway from Bend to Trinidad, Calif., to connect with Northwestern Pacific R.R. of which line J. W. Williams, Phelan Bldg., San Francisco, is Ch. Engr. Constr.

California—Pacific Electric Ry. granted permission by State Railroad Comn. to lay spur track across Covina Blvd., Railroad Ave., Clark and Los Angeles St., near Vineland. (Baldwin Park post office). J. McMillan, Pacific Electric Bldg., Los Angeles, Gen. Mgr.

Ontario—Essex Terminal Ry. making surveys electric line from Essex to Amherstburg. W. Woollatt, Walkerville, Vice-Pres. and Gen. Mgr.

Prices and Contracts Awarded

Florida—Export Ry. let contract 9-mi. railway from phosphate mines to Hillsborough Bay, 6 mi. south of Tampa and 6-mi. spur to South Tampa to H. L. PIERCE, Tampa.

Alabama—Southern Railway System let contract 2 sections double tracking, 1 from Burnstall (Bessemer post office) to Tannehill (Green Pond post office) 11 mi.; and 1 from Tuscumbia and Russell, Miss., 4 mi. on Alabama-Great Southern Ry. (branch of Southern Railway System) to R. RUSSELL, Charlotte, N. C.

Indiana—Evansville & Indianapolis R.R. Evansvills, let contract realignment work from Terre Haute to Evansville, about 150 mi., to W. E. CALLAHAN CONSTRUCTION CO., Omaha.

Montana—Northern Pacific Ry. let contract 33-mi. single-track from Bozeman to Logan to M. WOLDSON, Spokane, Wash.

Missouri—Chicago, Burlington & Quincy R.R. let contract extending line from Mexico to Kansas City, 100 mi., to McARTHUR BROS CO., 208 South La Salle St., Chicago.

Oklahoma—Oklahoma Union Traction Co., Tulsa, let contract electric interurban line between Tulsa and Sapulpa by way of West Tulsa and Red Fork to INTERURBAN CONSTRUCTION CO., Tulsa.

Oklahoma—Sand Springs R.R. soon lets contract grading, bridging and concrete work on extension between Sand Springs and Hominy, thence to point on proposed extension of Atchison, Topeka & Santa Fe R.R., about 41 mi. Track laying and other preparatory work to be done by company's forces. H. T. Morrison, 35 North Main St., Tulsa, Supt.

Arizona—Atchison, Topeka & Santa Fe R.R. let contract grading 3¾ mi. from Clarksdale to Cottonwood on Verde Valley branch to FLEMING & STITZER, Jerome; trestle, culverts and concrete work to GILMORE, SCHWITTERS & CHESNEY, Jerome, $150,000.

BRIDGES

Proposed Work

W. Va., Fairmount—(Official)—City retained Concrete-Steel Engineering Co., Park Row Bldg., New York, to make plans 2 concrete steel arch bridges over Coal Run connecting Adams St. and Fairmont Ave. and over Monongahela River on Washington St.

Fla., Tampa—See item under "Streets and Roads."

Kan., Larned—Pawnee County plans to replace O'Rourke Bridge, River Township. About $25,000. Address County Clk., Larned.

Tex., Kerrville—See item under "Streets and Roads."

Ont., Petersboro—City soon receives bids high level bridge. About $200,000. S. B. Armstrong, Clk.

Bids Desired

Pa., Reading—(Official)—Berks County receiving bids Apr. 26 rein.con. bridge over Schuylkill River, Cumru Township. Bids are requested on 2 propositions, 1st—3 90-ft. spans girder viaduct approaches at each end, 2nd—1 300-ft. arch rib span, suspend floor system and girder viaduct approaches at each end. C. J. Rhode, Reading, County Controller. Advertised in this issue.

Va., Shawsville—Montgomery County Comrs. receiving bids Apr. 17, steel bridge 88-ft. long over South Fork of Roanoke River, 6½-mi. from Shawsville. Address County Clk., Christiansburg.

N. C., Gastonia—Gaston and Mecklenburg Counties receiving bids Apr. 20, rebuilding bridges over Catawba River at Sloans, Mt. Holly and Rozzells Ferries, concrete or steel. Address County Clk., Charlotte.

Ga., Peyton—C. M. Holland, Pur. Agt., Fulton County receiving bids Apr. 14 rein.-con. bridge over tracks Southern Ry.

Ind., Muncie—Delaware County receiving bids Apr. 14, 2 bridges. Address County Clk., Muncie.

Mich., Ishpeming—Bd. Comrs. Marquette County receiving bids Apr. 28, 7 I-beam and concrete bridges, spans 17 to 26-ft., concrete, 57 to 120-cu.yd., resurfacing 3.5-mi. 14-ft. trap rock water bound macadam road. Alternate bids received for crushing and furnishing stone on this job; building 0.86-mi. water-bound trap rock macadam road and grading and gravel dressing 2.77-mi. road. About 15,000-yd. earth, 1000-yd. loose rock, 200-yd. solid rock and 3800-yd. gravel. K. I. Sawyer, Supt.

Ia., Tipton—Bd. Supervs. Cedar County receiving bids Apr. 10, 44 rein.-con. box culverts and 3 I-beam bridges with concrete floor and abutments. A. C. Yetter, Tipton, County Audr.

Minn., Austin—(Official)—Mower County receiving bids Apr. 20, 101 bridges. A. C. White, Austin, County Engr.

Neb., Auburn—Nemaha County receiving bids Apr. 19 steel and concrete bridges. Address County Clk., Auburn.

Idaho, Hailey—G. McLeod, Blaine County Recdr., receiving bids Apr. 9, 108-ft. steel highway bridge over Big Wood River.

Calif., Riverside—Riverside County receiving bids Apr. 11, bridge over Snow Creek. A. F. Pilch, Riverside, County Clk.

Bridges (Continued)

Calif., Visalia—Bd. Supervs. Tulare County receiving bids Apr. 15, 16 concrete and steel bridges between Tipton and Octol. Address County Clk., Visalia.

Prices and Contracts Awarded

Fla., Tampa—Hillsborough County received low bids bridges over (a) Little Manatee River, (b) Alafia River, from Cornwall Construction Co., (a) $11,825, (b) $12,590; Edwards Construction Co., Tampa (a) $14,087, (b) $14,322; Austin Bros. Co., Atlanta, (a) $11,925, (b) $12,700.

Ia., Denison—Crawford County let contract steel and rein.-con. bridges and culverts to E. McNEAL, Beloit; WARD & WEIGHTON, Sioux City; ELKHART BRIDGE CO., Elkhart, Ind., D. H. KNIEF, Denison, and T. A. HICKS, Manilla.

Neb., Kearny—(Official)—Buffalo County let contract bridges and repair work to be done during year to OMAHA STRUCTURAL STEEL WORKS, Omaha.

Wash., Olympia—Pierce and Thurston Counties let contract McKenne Bridge to C. HUBER, Central Bldg., Seattle, $27,987.

WATER-WORKS

Proposed Work

Ct., Putnam—City making plans extending and improving water system. A. Hawkins, G. H. Gilpatric, H. J. Smith, Bd. Water Comrs. Hanscom Construction Co., 70 Kilby St., Boston, Engr.

N. Y., Auburn—City making plans filtration plant. About $200,000. J. S. Hanlon, City Clk. Hagen, Whipple & Fuller, 30 East 42nd St., New York, Engr.

N. J., Butler—Standard Oil Co., 26 Broadway, New York, plans 7-mi. pipe line detour around Newark watershed.

N. Y., Schuylerville—City making plans extending water system. About $15,000. W. Greewalch, 14 Mining Blvd., Albany, Engr.

N. J., Garfield—City plans air lift system of obtaining water. About $18,000.

N. J., Mendham—Borough receiving bids May 1 extending water system. Plans include 14,000 ft. 6-in. pipe and 8,000,000-gal. reservoir. About $30,000. F. V. Pitney, Morristown, Engr.

Pa., Ellwood City—Ellwood City Water Co., plans reservoir. J. R. Burt, Supt.

Pa., Titusville—City plans water pump, 5,000,000-gal. capacity. J. J. Sharpe, Supt.

Md., Mt. Rainier—City soon receives bids extending water system to include 10-mi. water mains, valves and hydrants. About $50,000. H. Stevens, Union Trust Bldg., Wash., D. C., Arch. $50,000.

Va., Farmville—City election Apr. 24 to vote on $50,000 bonds to improve water and light plants, also to improve streets.

Va., Harrisburg—City plans improving water system, including pumping station at Laymans Springs, also sludge beds at filtration plant. About $20,000 and $18,000 respectively.

N. C., Beaufort—See item under "Streets and Roads."

Ga., Swainsboro—City election Apr. 24 to vote on $50,000 bonds to build water and sewer systems. J. B. McCrary Co., Atlanta, Engr.

Ga., Thomasville—City election Apr. 27 to vote on $160,000 bonds to extend water mains and improve water and light plants.

La., Marksville—City retained E. M. Kursheedt, Engr., Marksville, to make plans water system. City will also vote on bond issue.

La., Rayne—City receiving bids Apr. 23 improving water and light plant. E. J. Bertrand, Supt. H. Raymond, Interstate Bank Bldg., New Orleans, Consult Engr.

La., Shreveport—City plans extending water system to Henderson Cotton Oil Co.'s plant. W. R. Goss, Supt.

Tenn., Bristol—City plans $50,000 bond issue to extend and improve water system.

Tenn., Trezevant—City plans to vote on $12,500 bonds to extend and improve water system.

Ohio, Akron—C. F. Beck, Dir. Pub. Ser., receiving bids Apr. 18 furnishing and installing turbo-centrifugal pumps, 1 high- and 1 low-lift units.

Ohio, Greenwich—F. H. Daniels, Clk., Bd. Trustees Pub. Affairs Huron County, receiving bids Apr. 10 extending and improving water system to include additions to pumping station, 10-in. suction main, intake crib, concrete spillway and excavation in present reservoir, etc.

Ohio, Maple Heights—(Bedford post office)—Town election May 26 to vote on $15,000 bonds to build water system.

Ohio, Marietta—City plans to issue $75,000 bonds for rein.-con. reservoir, 4,000,000-gal. capacity. W. M. Morse, Supt.

Ohio, Tiffin—City plans extending and improving water system.

Ind., Whiting—City plans filter plant at 119th and Front St. About $150,000. A. Exton, City Engr.

Mich., Dearborn—Village making plans extending water mains. About $12,000. F. Reamer, Clk. G. Dingeman, County Bldg., Detroit, Engr.

Mich., Dundee—City soon receives bids 200,000-gal. reservoir and 50,000-gal. steel tank and tower. About $35,000. W. H. Terrill, City Clk. G. Champe, 609 Nasby Bldg., Toledo, Engr.

Mich., Globeville—City voted $10,000 bonds for water system.

Mich., Hamtramck—Village voted $75,000 bonds for water system.

Ill., Chicago—Union Petroleum Co. plans pump house at 4345 South Western Ave. About $10,000.

Ill., Chicago—Armour & Co., Inc., Union Stock Yards, plans pump house. About $45,000.

Ill., Jacksonville—City received report from Jacksonville Engineering Co. estimating cost impounding reservoir at $68,989.

Wis., Madison—Council voted to install water-softening plant. About $150,000 to $175,000. E. E. Parker, Supt.

Ia., Audubon—City election Apr. 9 to vote on $20,000 bonds issue to extend and improve water system.

Ia., West Point—City sold $15,000 bonds to install water system.

Minn., Stillwater—City voted $50,000 bonds extending water mains. C. A. Lammers, City Clk.

Wyo., Casper—City plans election to vote on $75,000 bonds to extend water mains.

Mont., Fairview—City plans water and sewer systems. Empire Construction Co., Minot, N. D., Engr.

Ark., Marvell—City plans water-works system. About $16,000.

Tex., Corsicana—City plans election to vote on $50,000 bonds for water system. C. B. Lewis, Supt.

Tex., Houston—City voted $75,000 bonds for water system and $25,000 to pave streets.

Okla., Blair—City plans to vote on $20,000 bonds to improve water system.

Okla., Coyle—City voted $13,000 bonds for water system.

Okla., Frederick—City voted $35,000 bonds to extend water system; plans include 500,000-gal. reservoir and 8-mi. pipe line.

Okla., Jenks—City voted $13,000 bonds to build water system.

Okla., Okmulgee—Bd. Comrs. retained Benham Engineering Co., Oklahoma City, to make plans water and sewer extensions, to include water-purification plant, raising present dam and building secondary reservoir, new supply line, rebuilding pumping station and extending water mains; also plans to vote on $300,000 bond issue for work.

Okla., Red Rock—City plans water system. About $22,000.

Okla., Vian—City election soon to vote on $10,000 bonds to extend water system.

Okla., Wibberton—City retained Mackintosh-Walton Engineering Co., Oklahoma City, to make plans water-works system. About $55,000.

Colo., Grand Junction—City plans auxiliary pumping plant. H. T. Verbeck, Comr.

Idaho, Bonners Ferry—City plans to vote on $85,000 bonds to install water system.

Utah, Salt Lake City—City receiving bids Apr. 17 building water mains during year. C. F. Barrett, Supt.

Nev., Reno—City making plans additions to water-works system, including new pump unit. G. A. Campbell, Mgr.

Calif., Berkeley—(Official)—City does not plan $2,000,000 bond issue for water system. A. G. Briggs, City Engr.

Calif., Los Angeles—Ocean Park Water Co. to extend its plant. About $50,000.

Que., Montreal South—M. M. Condon, Town Clk., receiving bids in April for water system. About $180,000.

Ont., New Toronto—City making plans extending water system. About $40,000. J. Louden & Hertzberg, Excelsior Life Bldg., Toronto, Engr.

Ont., St. Catharines—(Official)—We have been advised that the Dominion Government has suspended all work on Welland Ship Canal and proposed conduit to serve city of St. Catharines and towns and villages of district with water from Lake Erie indefinitely.

Alta., Redcliffe—City plans to install pumps, 1,500,000-gal. per day capacity, boilers, etc. J. F. Askwith, Engr.

Bids Desired

N. Y., Auburn—(Official)—Bd. Water Comrs. receiving bids Apr. 27 slow sand water filter, 9,000,000-gal. capacity. Hazen, Whipple & Fuller, 30 East 42d St., New York, Consult. Engr. Advertised in this issue.

N. Y., New York—(Manhattan and Bronx)—Cast-Iron Pipe, etc.—W. Williams, Comr. Water Supply, Gas and Electricity, Room 2351 Municipal Bldg., receiving bids Apr. 9 furnishing, delivering, unloading, stacking and storing, c.i. pipe and double-nozzle fire hydrants.

N. Y., Sherburne—S. P. Kutschbach, Chn. Water Bd. receiving bids Apr. 15 concrete well, 1000-gal. steam pump including pumping station and force main of 600-ft. 8-in. piping. C. E. Perry, 36 State St., Albany, Consult. Engr.

Wis., Mauston—City receiving bids Apr. 14, concrete reservoir, 25-ft. diameter, 25-ft. deep, also laying sewer pipe, catch basins, manholes, etc.

N. Mex., Clovis—City receiving bids Apr. 18 improving water and light plants. Plans include 4 centrifugal pumps, 240-kv.a. generator, 500-hp heater, uniflow engine, cast-iron pipe, hydrants, valves, etc. G. W. Chalfand, Supt. Burns & McDonald, 400 Inter-State Bldg., Kansas City, Mo., Engr.

Prices and Contracts Awarded

N. J., Ogdensburg—Boro. rejected bids water system. About $60,000.

Ga., Madison—City let contract extending water and sewer systems to DYSARD CONSTRUCTION CO., Austell Bldg., Atlanta, $24,000.

Ill., Bloomington—City let contract water mains in Front and Lee St. to D. H. RIDER.

Ill., Effingham—Eastern Illinois Utilities Co. let contract filtration plant to A. C. LOOMIS CONSTRUCTION CO. About $14,000.

Ill., Wilmington—City let examining water mains, fire hydrants, etc. to EMBANKMENT CO., 309 Darcy Bldg., Joliet, $30,607.

Wis., East Troy—City let contract water system to J. P. CHAFIN, $10,000.

Ia., Council Bluffs—City let contract extending water mains to HAMMOND-BYRD IRON CO., Birmingham, Ala., $22,000.

N. D., Bowman—City let contract water system to HAGGART CONSTRUCTION CO., Fargo, $25,000.

N. D., Grand Forks—City let contract extending and improving filtration plant to PITTSBURGH FILTER MANUFACTURING CO., Farmers Bank Bldg., Pittsburgh, $14,707.

Tex., Temple—City will install concrete reservoir and settling basin at water-works by day labor. About $30,000. R. D. Morgan, Supt.

Okla., Kaw—City let contract water and light plant to T. GUDGEL, Stillwater, $25,000.

Calif., La Canada—La Canada Water Co. let contract rein.-con. reservoir to P. H. EHLERS, 5613 Harold Way, Los Angeles.

Calif., Santa Barbara—Water Comrs. let contract 1,250,000-gal. reservoir to SNOOK & HENYON, Santa Barbara.

Ont., Linday—City let contract stone and brick pump house addition to RESE WILLIAMS, $10,000.

SEWERS

Proposed Work

Ct., Stamford—Sanitation Comn. making plans for sewage-disposal plant.

N. Y., New Rochelle—City plans sewage disposal plant. About $15,000. J. A. Hadert, City Engr.

N. J., Passaic—City plans sewer in portion Van Houten Ave. C. R. Wise, City Engr.

N. J., Trenton—Colored Manual Training School asked legislature to appropriate $25,000 to install sewage-disposal system.

Pa., Erie—City plans storm water sewer in portion Myrtle St. About $62,798. F. G. Lynch, City Engr.

N. C., Thomasville—(Official)—City plans extending sewer system and pipe line. N. S. Mullican, City Mgr.

S. C., Easley—See item under "Streets and Roads."

Ga., Madison—See item under "Water-Works."

Ga., Swainsboro—See item under "Water-Works."

Ohio, McConnellsville—City passed resolution to install sanitary sewer in portion Kennebec Ave.

Ohio, Marion—City plans sanitary and storm water sewer in portions Boone and Neal Ave. H. H. Noyes, City Engr.

Ohio, Youngstown—City plans sewer in portion Pine Hollow Drive. F. M. Lillie, City Engr.

Ohio, Youngstown—City passed resolution to install sewer with laterals from Crab Creek at Valley to Bond St. F. M. Lillie, City Engr.

Ohio, Youngstown—City passed resolution to install sewers and pave Lucius Ave. F. M. Lillie, City Engr.

Ind., Gary—City plans sewer system in southern section of city. About $80,000. W. J. Fulton, City Engr.

Mich., Flint—City plans storm sewers in portions of 26 streets, 2 sanitary sewers and 3 intersecting sewers. E. C. Shoecroft, City Engr.

Mich., Grand Rapids—Bd. Pub. Wks. soon receives new bids South West sewer system. About $160,000. W. S. Moore, City Engr.

Mich., Ionia—City soon receives bids sanitary sewers in various streets, including 6000 lin.ft. 6- to 8-in. crock tile.

Mich., Pontiac—City making plans sewer in portion College St. W. J. Fisher, City Engr.

Ill., Batavia—City made plans and estimates cost sewer system on east side at $30,000.

Sewers (Continued)

Ill., Cairo—(Official)—City soon lets contract sewer and filling in 38th St. and filling and grading in 28th St. About $90,000 and $60,000, respectively. G. F. Dewey, City Engr.

Ia., Marshalltown—City council plans laying 18 blocks storm sewers in 3rd Ward. W. H. Steiner, City Engr.

Ia., Newton—City making plans 5 mi. of 8- to 15-in. vitrified sewer pipe and 2 sewage-disposal plants. M. G. Hall, Centerville, Engr.

Minn., Duluth—City plans sanitary sewer in portion Oxford St. L. Ayers, City Engr.

Minn., Minneapolis—City plans to install trunk line sewers and laterals to cost $487,000. F. W. Cappelin, City Engr.

Minn., St. Paul—City plans sewer in portion Bradley St. O. Clausson, City Engr.

Minn., Winona—City making plans storm sewer in portion Olmsted Ave. H. B. Walling, City Engr.

N. D., Glen Ullin—City retained Black & Griffin, Engr., Mandan, to make plans and estimates for sewage system.

Mont., Fairview—See item under "Water-Works."

BUILDING OPERATIONS FOR MARCH

Following is a list of contracts awarded published by the F. W. Dodge Co. for:

New York, New England, New Jersey, Pennsylvania, Maryland, Delaware, District of Columbia, Virginia, Ohio, West Virginia, Illinois, Indiana, Iowa, Wisconsin, Michigan, Minnesota, North and South Dakota, and portions of Missouri and eastern Kansas:

Contracts awarded January 1 to April 1,	1917	$318,785,000
" " " " " "	1916	223,645,000
" " " " " "	1915	167,637,300
" " " " " "	1914	149,032,000
" " " " " "	1913	196,788,000
" " " " " "	1912	154,413,500
" " " " " "	1911	173,904,313
" " " " " "	1910	172,922,809

NEW YORK STATE AND NORTHERN NEW JERSEY

Contracts awarded January 1 to April 1,	1917	$68,652,000
" " " " " "	1916	27,269,000
" " " " " "	1915	34,634,500
" " " " " "	1914	25,688,000
" " " " " "	1913	76,658,000
" " " " " "	1912	43,317,500
" " " " " "	1911	46,309,000
" " " " " "	1910	56,972,000

For the larger territory covered it is noticed that the three months of 1917 are ahead of any year for the past seven, the nearest one being 1916, which is $95,000,000 less than for this year. The smaller territory is ahead of all years but 1913, which was $8,000,000 larger than 1917 and $20,000,000 ahead of 1910, the next largest year. The contracts for the large territory awarded during 1917 total $132,744,000 against $95,192,000 in February and $90,849,000 in January. The smaller territory had contracts awarded during March totaling $26,424,000 against $20,370,000 in February and $21,858,000 in January. These figures show that whereas New York and New Jersey are in a prosperous condition, the Central States are away ahead of them proportionately over previous years.

PIPE, CINCINNATI, OHIO.

Bids were received by Dept. Pub. Ser. for laying cast-iron pipe in various streets during year from (A) J. J. Brown; (B) Cavanaugh & Co.; (C) J. Curley & Co. The item bids were as follows:

	A	B	C
1,000 lin.ft. 4-in. unimproved streets	$0.75	$0.40	$0.45
500 lin.ft. 4-in. water-bound macadam	.75	.40	.50
100 lin.ft. 4-in. special binder macadam	.75	.40	.60
100 lin.ft. 4-in. boulder paving	.75	.80	.60
100 lin.ft. 4-in. granite paving	.75	.80	.90
100 lin.ft. 4-in. brick paving	.75	1.00	1.00
100 lin.ft. 4-in. asphalt paving	1.00	.50	1.50
100 lin.ft. 4-in. wood block paving	1.00	.50	1.00
100 lin.ft. 4-in. unimproved sidewalk	.75	.40	.40
100 lin.ft. 4-in. cement sidewalk	1.00	.02	.50
100 lin.ft. 4-in. brick sidewalk	.75	.02	.50
20,000 lin.ft. 6-in. unimproved streets	.75	.65	.58
20,000 lin.ft. 6-in. water-bound macadam	.75	.65	.58
1,000 lin.ft. 6-in. special binder macadam	.75	.90	.80
200 lin.ft. 6-in. boulder paving	1.00	.95	.90
200 lin.ft. 6-in. granite paving	1.00	1.00	1.40
200 lin.ft. 6-in. brick paving	1.00	1.35	1.50
200 lin.ft. 6-in. asphalt paving	1.25	1.75	2.00
200 lin.ft. 6-in. wood block paving	1.25	1.35	1.75
200 lin.ft. 6-in. unimproved sidewalk	.75	.45	.50
200 lin.ft. 6-in. cement sidewalk	1.00	.02	1.25
200 lin.ft. 6-in. brick sidewalk	.75	.02	.90
1,000 lin.ft. 8-in. unimproved streets	.75	.80	.60
1,000 lin.ft. 8-in. water-bound macadam	.80	.75	.75
100 lin.ft. 8-in. special binder macadam	.75	.95	.90
100 lin.ft. 8-in. boulder paving	1.00	.75	1.00
100 lin.ft. 8-in. granite paving	1.00	.95	1.50
100 lin.ft. 8-in. brick paving	1.00	1.30	1.60
100 lin.ft. 8-in. asphalt paving	2.00	1.85	1.75
100 lin.ft. 8-in. wood block paving	2.00	1.40	1.80
100 lin.ft. 8-in. unimproved sidewalk	.75	.45	.60
100 lin.ft. 8-in. cement sidewalk	1.50	.02	1.40
100 lin.ft. 8-in. brick sidewalk	.85	.02	1.00
500 lin.ft. 10-in. unimproved streets	.80	.85	.70
500 lin.ft. 10-in. water-bound macadam	.90	.90	.85
200 lin.ft. 10-in. special binder macadam	.90	.90	1.00
100 lin.ft. 10-in. boulder paving	.90	.90	1.50
100 lin.ft. 10-in. granite paving	1.00	1.25	1.60
100 lin.ft. 10-in. brick paving	1.00	1.00	1.70
100 lin.ft. 10-in. asphalt paving	2.00	1.70	1.80
100 lin.ft. 10-in. wood block paving	2.00	.02	1.90
100 lin.ft. 10-in. unimproved sidewalk	.80	.50	.70
100 lin.ft. 10-in. cement sidewalk	1.20	.02	1.50
100 lin.ft. 10-in. brick sidewalk	1.00	.02	1.10
100 lin.ft. 12-in. unimproved streets	.90	.70	.90
100 lin.ft. 12-in. water-bound macadam	1.00	.90	1.10
100 lin.ft. 12-in. special binder macadam	1.00	.90	1.30
100 lin.ft. 12-in. boulder paving	1.00	.70	1.40
100 lin.ft. 12-in. granite paving	1.25	1.50	1.80
100 lin.ft. 12-in. brick paving	1.25	1.35	2.00
100 lin.ft. 12-in. asphalt paving	2.00	1.75	2.00
100 lin.ft. 12-in. wood block paving	2.00	1.25	2.20
100 lin.ft. 12-in. unimproved sidewalk	.90	.75	.90
100 lin.ft. 12-in. cement sidewalk	1.25	.02	1.75
100 lin.ft. 12-in. brick sidewalk	1.00	.02	1.40
500 cu.yd. additional excavation	.25	.02	1.00
1,000 cu.yd. rock excavation	.01	.02	1.00
400 cu.yd. brickwork	.01	15.00	15.00
150 cu.yd. concrete	.01	7.50	8.00
1,000 lb. steel	.01	.04	.25
1,500 tons hauling	1.00	2.00	1.00
500 lin.ft. removing existing mains	.25	.35	.20
100 lin.ft. changing ¾-in. branches	3.00	5.00	3.00
25 changing 1-in. branches	3.00	2.00	6.00
25 changing 1¼-in. branches	3.00	2.00	5.00
10 changing 2-in. branches	3.00	2.00	7.00
10 changing 3-in. branches	3.00	3.00	10.00
100 4, 6 and 8-in. valve chambers, complete	25.00	20.00	35.00
50 10 and 12-in. valve chambers, complete	30.00	25.00	40.00
10 16 and 20-in. valve chambers, complete	35.00	30.00	60.00
2 24-in. valve chambers, complete	1.00	35.00	75.00
Extended totals	$46,873	$48,971	$51,275

IRRIGATION, OTIS ORCHARD, WASH.

Bids were received by Otis Orchards Irrigation Dist. for improving distribution system from (A) H. Pederson Construction Co.; (B) J. A. Fletcher & Co.; (C) O. N. Wolfe & Co. The item bids were as follows:

	A	B	C
30,000 cu.yd. excavation and backfill	$0.35	$0.44	$0.57
20 ft. 6-in. steel pipe, in place	1.20	1.20	1.35
20 ft. 8-in. steel pipe, in place	1.60	1.60	1.80
60 ft. 10-in. steel pipe, in place	3.20	3.00	2.90
80 ft. 12-in. steel pipe, in place	3.70	3.50	3.65
20 ft. 15-in. steel pipe, in place	4.80	4.00	4.25
40 ft. 16-in. steel pipe, in place	5.25	4.50	4.50
100 6-in. delivery valves, in place	4.00	3.50	4.20
250 8-in. delivery valves, in place	5.00	5.00	5.00
10 8-in. sluice valves, in place	4.00	3.00	10.30
20 10-in. sluice valves, in place	5.00	3.50	11.25
10 12-in. sluice valves, in place	6.00	4.25	12.00
5 15-in. sluice valves, in place	10.00	10.00	16.50
1 18-in. sluice valve, in place	15.00	24.00	19.00
1,000 ft. 18-in. vertical pipe, in place	.75	.70	.88
400 ft. 24-in. vertical pipe, in place	1.25	1.10	1.37
Control Chamber, Complete			
14,000 ft. 6-in. No. 2 vitrified clay pipe, in place	.15	.171	.20
60,000 ft. 8-in. No. 2 vitrified clay pipe, in place	.20	.238	.27
33,000 ft. 10-in. No. 2 vitrified clay pipe, in place	.30	.315	.34
22,000 ft. 12-in. No. 2 vitrified clay pipe, in place	.42	.418	.44
14,000 ft. 15-in. No. 2 vitrified clay pipe, in place	.65	.647	.60
1,900 ft. 18-in. No. 2 vitrified clay pipe, in place	.93	1.26	.88
1,300 ft. 24-in. No. 2 vitrified clay pipe, in place	1.60	1.69	1.37
70 pieces, 6-in. vitrified clay pipe specials, in place	.60	1.00	.62
300 pieces, 8-in. vitrified clay pipe specials, in place	.82	1.50	1.83
120 pieces, 10-in. vitrified clay pipe specials, in place	1.10	2.00	2.86
70 pieces, 12-in. vitrified clay pipe specials, in place	1.60	2.50	1.87
40 pieces, 15-in. vitrified clay pipe specials, in place	2.60	4.00	2.88
5 pieces, 18-in. vitrified clay pipe specials, in place	3.25	6.00	3.25
5 pieces, 24-in. vitrified clay pipe specials, in place	6.50	8.00	6.50
14,000 ft. 6-in. concrete pipe, in place	.18	.139	.20
60,000 ft. 8-in. concrete pipe, in place	.25	.205	.27
33,000 ft. 10-in. concrete pipe, in place	.35	.274	.34
22,000 ft. 12-in. concrete pipe, in place	.44	.327	.44
14,000 ft. 15-in. concrete pipe, in place	.70	.578	.60
1,900 ft. 18-in. concrete pipe, in place	.85	.768	.88
1,300 ft. 24-in. concrete pipe, in place	1.50	1.312	1.37
70 pieces 6-in. concrete pipe specials, in place	.60	.90	.62
300 pieces 8-in. concrete pipe specials, in place	.82	1.10	1.83
120 pieces 10-in. concrete pipe specials, in place	1.10	1.50	2.86
70 pieces 12-in. concrete pipe specials, in place	1.60	2.00	1.87
40 pieces 15-in. concrete pipe specials, in place	2.60	1.12½	2.88
5 pieces 18-in. concrete pipe specials, in place	3.25	5.00	3.25
5 pieces 24-in. concrete pipe specials, in place	6.50	10.00	6.50
3,900 ft. 16-in. wood pipe, in place	.90	.75	.72
3,900 ft. 16-in. wood pipe, creosoted, in place	1.20	1.10	1.01
Extended totals clay pipe and wood pipe	$65,097	$71,184	$79,287
Extended totals concrete pipe and wood pipe	$71,025	$63,772	$79,287
Extended totals clay pipe and creosoted wood pipe	$66,267	$72,549	$80,418
Extended totals concrete pipe and creosoted wood pipe	$72,195	$65,136	$80,418

SEWER, NEZPERCE, IDAHO

Bids were received by city Mar. 7 for sewer system from (A) SECURITY BRIDGE CO., Lewiston National Bank, Lewiston (awarded contract); (B) G. A. Raven, 818 Mechanics Bldg., San Francisco; (C) Elliott Contract Co., 302 McKay Bldg., Portland; (D) W. L. Geist, St. Maries, $30,031; (E) G. M. Payne, 724 East Mission Ave., Spokane, $30,117; (F) Illinois Steel Bridge Co., Hutton Bldg., Spokane, $33,851; (G) J. A. Fletcher & Co., 823 Greene Bldg., Seattle, $39,397. The item bids of the 3 lowest bidders were as follows:

	A	B	C
16,000 lin.ft. of 8-in. vitrified pipe sewer in place	$0.65	$0.72	$0.70
5,500 lin.ft. of 10-in. vitrified pipe sewer in place	.69	.84	.80
1,200 lin.ft. 12-in. vitrified pipe sewer in place	.78	.90	.90
3,000 lin.ft. 15-in. vitrified pipe sewer in place	1.02	1.20	1.00
60 manholes complete	77.00	60.00	50.00
15 lampholes complete	6.00	8.00	20.00
5 flushtanks complete	110.00	90.00	150.00
Septic tank complete	2,248.00	3,000.00	3,000.00
700 cu.yds. of solid rock	4.00	1.00	3.00
Price per cu.yd. for extra or less trenching than shown	.65	.20	.50
Price per cu.yd. for extra or less concrete than shown	16.50	12.00	10.00
Extended totals	$28,499	$28,690	$28,830

BRIDGE, ANN ARBOR, MICH.

Bids were received by city for bridge over Huron River on Broadway, (1) with roadway paving, (2) without roadway paving, from (A) J. P. Rusche, Grand Rapids; (B) A. H. Prange, Grand Rapids; (C) B. Douglas Co., Ann Arbor; (D) Hackedorn Contracting Co., Indianapolis, (1) $60,958, (2) $59,856; Candler Dock and Dredge Co., Detroit, (1) $66,401, (2) $64,565; W. S. Newhall Co., Cleveland, (1) $68,227, (2) $66,697. The item bids of the 3 lowest bidders were as follows:

	A	B	C
1,312 cu.yd. excavation below 760 ft	$2.88	$5.00	$6.50
3,842 cu.yd. excavation above 760 ft	.60	2.50	1.00
1,717 cu.yd. concrete in piers and abuttments	7.80	7.50	11.40
67 cu.yd. concrete in wing walls	14.75	9.50	18.00
1,035 cu.yd. concrete in arches	24.70	16.50	19.15
92 cu.yd concrete in spandrel walls	18.85	20.00	25.00
18 cu.yd. concrete curbing	18.00	10.00	12.00
5,615 sq.ft. sidewalk	.12	.12	.15
477 lin.ft. railing	2.40	2.50	3.00
612 sq.yd. brick pavement	2.10	2.50	2.50
Lighting system (lump sum)	1,050.00	1,500.00	1,045.00
Roadway drainage (lump sum)	120.00	150.00	250.00
Removing old bridge (additional)			50.00
Removing old bridge (deduction)	700.00	200.00	
Extended totals with roadway paving	$51,661	$53,623	$60,734
Extended totals without roadway paving	50,376	52,093	59,204

RESERVOIR, ST. PAUL, MINN.

Bids were received by city for high service reservoir on Dale St. from (A) G. J. Grant Construction Co., 902 New York Life Bldg., St. Paul (awarded contract); (B) Winston Bros. Co., Wabash and Clifford St., St. Paul; (C) W. P. Cowles, 616 Flour Exchange, St. Paul; (D) Siems, Helmers & Schaffner, $266,520; (E) Thornton Bros Co., $267,863; (F) W. S. Hoy Co., $275,878. The item bids of the 3 lowest bidders were as follows:

	A	B	C
4½ acres clearing and grubbing	$80.00	$120.00	$49.00
90,620 cu.yd. earth excavation	.24	.29	.294
14,500 cu.yd. clay blanket under reservoir	.80	.81	.80
10,552 ton mi. sprinkling and rolling foundations and embankments	.30	.62	.39¼
1,700 cu.yd. backfilling outside of walls	.80	1.10	1.22
99,800 cu.yd. earth embankments and fill over structures	.52	.70	.39¼
4½ acres seeding	35.00	50.00	62.55
12,800 sq.yd. sodding	.25	.23½	.22
4,633 cu.yd. concrete inverted groined arch floor 1:2:4	4.52	5.90	5.64
3,831 cu.yd. concrete groined cloistered and barrel arch roof	9.67	5.90	10.88
2,580 cu.yd. concrete flat slab footings for outside walls	4.79	5.90	4.66
3,049 cu.yd. concrete outside wall-slabs and buttresses	7.72	5.90	8.46
2,734 cu.yd. concrete division or center wall	5.52	5.90	6.14
1,503 cu.yd. concrete columns	12.60	5.90	12.55
317 cu.yd. concrete conduits and sumps	11.63	5.90	9.81
617 cu.yd. concrete inlet and outlet gate chambers and aerator	9.07	5.90	10.18
95 sq.yd. concrete special finishing on floors	1.00	.58	.80
Steel reinforcement, ⅜-in. rods			
27,567 steel reinforcement, ½-in. rods		.01	.0092
154,383 lb. steel reinforcement, ⅝-in. rods		.01	.0092
579,332 lb. steel reinforcement, ¾-in. rods	.007⅛	.01	.0089
124,267 lb. steel reinforcement, 1-in. rods		.01	.0088
204,380 lb. steel reinforcement, 1-in. rods		.01	.0086¼
16,510 lb. miscellaneous steel and wrought iron work—iron 3,871 lb., steel 12,640 lb.	.13	.16	.104
650 lin.ft. copper and asphalt exp. lb. copper	.64	.779	.82
19,300 lin.ft. wooden expansion joints in footings, etc	.06	.035	.068
8 setting 48-in. circular flanged sluice gates	50.00	30.00	46.60
2 setting 48x48-in. spigot in concrete sluice gates	50.00	34.00	49.00
Setting 48-in. double hub gate valves	62.00	9.50	73.60
Setting 24-in. flanged gate valves	30.00	5.00	22.10
4 setting 6-in. double hub gate valves	10.00	2.50	5.00
1 ton spec. laying and erecting c.-i. pipe and 5 tons pipe specials, 6-in. to 20-in. diameter, inclusive	20.00	9.50	11.00
37 tons spec. laying and erecting c.-i. pipe and 105 tons pipe specials, 24-in. to 48-in. diameter, included	12.00 12.50 10.00	9.50 7.00 7.00	11.00 9.80 8.00
1 ton furnish and erecting c.-i. stop plank grooves	162.00	175.00	122.65
6,250 lb. furnish and erecting miscellaneous castings	.10	.13	.11
Extended totals	$246,054	$251,320	$254,091

Alaska Engineering Commission has established a branch office in Portland, Oregon, in the Customs House Building. Mr. J. J. Hittinger will be in charge of the new office.

Blaw Steel Construction Company announces the opening of their Boston office at 6 Beacon Street, Room 606. The office will be under the charge of Irving Burrows, who was formerly with their New York sales department.

Edelen and Company, a firm formed by T. J. Stone Edelen who was formerly with the Edelen Kilvert Company of Winnipeg, and John A. Conboy lately with the Standard Supply and Equipment Company have opened offices in the Commercial Trust Bldg., Philadelphia, Pa. This firm has the agency for the Red Concrete Mixers of the Chain Belt Company of Milwaukee, Wis.

Muller and Phipps (Asia) Limited, with headquarters at Englewood, N. J., have opened offices in Singaport, Strait Settlements, under the name of Muller, Phipps and Sellers, Limited, with H. A. Sellers, managing director.

Portland Cement Association has recently opened an office in the Northern Bank and Trust Building, Seattle, Wash., with C. N. Reitze in charge as district engineer.

L. S. Shaw & Company has been formed to deal in power-plant equipment, with offices in the Dime Bank Building, Detroit, Mich. Mr. L. S. Shaw, who heads the new firm, has had 15 years' experience in power-plant design, construction and equipment.

Bacharach Industrial Instrument Co. has removed its business from 14 Wood St. to 422 1st Ave., Pittsburgh, Pa.

Edison Portland Cement Co., 1133 Broadway, New York, N. Y., has removed its general offices to 8 West 40th St., New York.

George L. Hammons, Inc., engineers' supplies, factory equipment, etc., has opened an office and salesroom at 627 Washington Blvd., Chicago, Ill. The company will handle a line of specialties for the engineering trade and act as special representatives of the U. S. Asbestos Co. in Chicago.

The Canadian Railway Department is making considerable increases in the rolling stock of the government railways, 88 locomotives having so far been secured or ordered this year. The Canadian Locomotive Works of Kingston has delivered 30 heavy Mikado freight locomotives and has been awarded a contract for 20 more of the same type at $39,000 each, which is about double the price paid before the war. Ten Santa Fe mogul locomotives were also purchased at $36,486 each, delivered in bond at at Montreal and 28 second-hand engines have been secured from Transcontinental Ry. contractors.

"Preparedness Note"—The only large contract placed by the Navy Department this week was that for 100 submarine nets, awarded to the American Steel and Wire Co. at $188,100. Bids were received for the unpurchased balance of the 200 patrol boats (submarine chasers) from 129 different shipbuilding companies, with prices ranging from $20,000 to $80,000. Most of the bidders bid on four boats or less, only one bidder, the Peninsula Lumber Co., of Portland, Ore., bidding on a large number, in this case 140 boats at $60,000 each. A number of bids were received on the basis of cost plus a percentage ranging from 10 to 20%. It is probable that the Navy will be able to purchase as many boats as it needs from the various bidders on this contract.

CONTRACTING NEWS

Of Special Interest to Engineers, Contractors, Builders and Manufacturers of Engineering and Building Supplies

Where name of official is not given inquiries should be addressed to City Clerk, County Clerk or corresponding official.

WATER-WORKS

Proposed Work

Mass., North Adams—City Council voted appropriation of $10,000 for extension to water mains. A. Conlon, supt.

Contract No. 104

W. S. Twining, Dir. Dept. City Transit, 754 Bourse Bldg., received bids, Apr. 3, section Delivery Loop Subway in Broad St. from (A) Philadelphia Subway Constr. Co., 712 Lincoln Bldg.; (B) Keystone State Constr. Co., 704-9 Pennsylvania Bldg.; (C) Smith, Hauser & Mac Isaac, Inc., [illegible] East 41st St., New York; (D) Underpinning & Foundation Co., 290 Broadway, New York; (E) E. E. Smith Constr. Co., Long Island City, N. Y.; [illegible] Dock Contr. Co., 95 River St., Hoboken, N. J. The item bids were as follows:

	A	B	C	D	E	F
315,000 cu.yd. excavation above elevation zero	4 81	4 55	5 70	3 60	4 90	4 40
100 cu.yd. excavation below elevation zero	6 00	6 00	1 00	4 00	4 90	7 00
100,000 ft.b.m. yellow pine lumber	55 00	110 00	50 00	50 00	60 00	50 00
Underpinning:						
1,100 ft. front, buildings 5 stories or less in height	75 00	40 00	62 00	60 00	50 00	60 00
200 ft. front, buildings over 5 and less than 10 stories in height	175 00	50 00	136 00	160 00	100 00	100 00
210 ft. front, buildings 10 stories or over in height	175 00	75 00	136 00	200 00	125 00	140 00
500 cu.yd. additional masonry for underpinning	18 00	8 00	16 50	10 00	1 00	12 00
Concrete Masonry:						
100 cu.yd. Class A-1:1:3	20 00	40 00	14 70	12 50	16 00	12 00
39,500 cu.yd. Class B-1:2:4	10 50	12 00	13 47	12 00	12 25	10 40
2,750 cu.yd. Class C-1:3:6	10 00	11 50	13 00	11 00	11 00	9 50
500 cu.yd. Class D-1:4:8	9 00	11 00	10 10	10 00	10 00	9 00
2,000 sq.ft. reinforced concrete sheathing	1 00	1 00	50	2 00	1 00	60
500 cu.yd. brick masonry	16 00	30 00	19 20	18 00	20 00	15 00
200 cu.yd. hollow terra cotta brick masonry	16 00	25 00	14 00	18 00	20 00	15 00
200 cu.yd. rubble masonry	8 00	15 00	10 10	9 00	11 00	3 00
1,400 sq.yd. citrified shale brick sewer lining	2 50	3 00	2 00	3 00	3 00	2 50
100 sq.yd. granite block sewer lining	3 50	3 00	2 50	3 00	3 00	3 00
Building New Manholes and Wellholes:						
28 manholes	140 00	150 00	85 00	130 00	150 00	60 00
150 vert.ft. wellholes	6 50	12 00	8 00	9 00	11 25	6 00
Building New Inlets:						
5 No. 1 inlets	120 00	200 00	135 00	150 00	150 00	100 00
5 No. 2 inlets	100 00	200 00	115 00	140 00	150 00	100 00
5 No. 3 inlets	85 00	200 00	93 00	125 00	150 00	100 00
5 No. 4 inlets	75 00	200 00	60 00	115 00	150 00	50 00
Taking Out and Rebuilding Inlets:						
15 inlets having standard pattern casting	60 00	150 00	60 00	125 00	125 00	40 00
5 inlets having old pattern casting to be replaced by standard	75 00	200 00	60 00	150 00	125 00	40 00
Flagstones:						
100 sq.ft. 2-in. thickness	50	50	40	30	40	40
100 sq.ft. 4-in. thickness	60	80	60	50	80	60
100 sq.ft. 6-in. thickness	75	1 50	80	75	1 00	80
100 cu.yd. dry rubble masonry or riprap	5 00	15 00	4 00	6 00	10 00	2 00
300 cu.yd. broken stone or gravel for drains	3 00	2 50	2 50	2 50	3 75	2 00
2,000 bags cement grout	1 00	1 00	70	1 10	1 00	1 25
7,800 sq.yd. granolithic finish	1 40	1 50	1 00	1 75	2 25	1 00
Fabric Waterproofing:						
1,000 sq.yd. 1-ply in asphaltic compound	85	1 50	1 00	70	1 20	70
500 sq.yd. 2-ply in asphaltic compound	1 50	2 50	1 55	1 00	2 20	1 10
500 sq. yd. 3-ply in asphaltic compound	2 00	3 50	2 11	1 40	2 55	1 50
500 sq.yd. 4-ply in asphaltic compound	2 50	4 50	2 25	1 80	3 35	1 90
1,000 sq.yd. 1-ply in coal tar pitch	85	1 00	95	65	1 00	70
500 sq.yd. 2-ply in coal tar pitch	1 50	1 50	1 50	95	1 70	1 10
500 sq.yd. 3-ply in coal tar pitch	2 00	2 00	2 03	1 30	2 40	1 50
500 sq.yd. 4-ply in coal tar pitch	2 50	2 75	2 25	1 60	3 10	1 90
3,000 sq.yd. 1-ply dry roofing felt	50	60	25	60	48	40
30,000 sq.yd. asphaltic mastic waterproofing	2 00	2 25	2 16	2 00	2 00	1 70
Brick in Waterproofing Compound:						
100 cu.yd. in asphaltic compound	30 00	35 00	35 00	28 00	36 00	29 00
100 cu.yd. in coal tar pitch	30 00	35 00	33 00	26 00	30 00	29 00
Vitrified Clay Pipe:						
3,100 lin.ft. 4-in.	40	50	27	40	40	30
2,000 lin.ft. 5-in. or 6-in.	55	60	39	50	50	50
2,400 lin.ft. 8-in. or 10-in.	75	1 00	78	60	70	50
2,800 lin.ft. 12-in.	1 00	1 75	94	1 00	1 00	1 00
3,200 lin.ft. 15-in. or 18-in.	1 75	2 75	1 74	1 50	2 00	3 00
100 lin.ft. 20-in.	2 50	4 00	2 00	2 00	2 50	4 00
100 lin.ft. 24-in.	4 00	5 00	2 75	2 50	3 00	5 00
Extra Heavy Cast Iron Soil Pipe:						
400 lin.ft. 3-in.	55	3 00	1 00	50	1 00	50
500 lin.ft. 4-in.	90	3 50	1 25	80	1 50	60

SUBWAY, PHILADELPHIA, PA.

Contract No. 103

W. S. Twining, Dir. Dept. City Transit, 754 Bourse Bldg., received bids, Apr. 3, section Delivery Loop Subway in Broad St. from (A) Keystone State Constr. Co., 704-9 Pennsylvania Bldg.; (B) Philadelphia Subway Constr. Co., 712 Lincoln Bldg.; (C) Smith, Hauser & Mac Isaac, Inc., 18 East 41st St., New York; (D) Underpinning & Foundation Co., 290 Broadway, New York. The item bids were as follows:

	A	B	C	D
258,000 cu.yd. excavation above elevation zero	$3 75	$4 55	$5 50	$4 05
22,400 cu.yd. excavation below elevation zero	4 00	5 25	5 50	7 00
100,000 ft.b.m. yellow pine lumber	50 00	110 00	75 00	50 00
Underpinning:				
1,500 ft. front, buildings 5 stories or less in height	80 00	40 00	50 00	60 00
500 ft. front, buildings over 5 and less than 10 stories in height	240 00	40 00	125 00	100 00
65 ft. front, buildings 10 stories or over in height	300 00	80 00	200 00	140 00
500 cu.yd. additional masonry for underpinning	10 00	8 00	1 00	12 00
Broad Street station, lump sum	20,000 00	7,000 00	25,000 00	15,500 00
Philadelphia and Reading Railunderecrossing, lump sum	30,000 00	150,000 00	140,000 00	80,000 00
Concrete Masonry:				
100 cu.yd. Class A-1:1½:3	12 50	40 00	16 00	12 00
33,800 cu.yd. Class B-1:2:4	12 00	12 00	12 25	10 60
2,500 cu.yd. Class C-1:3:6	11 00	11 50	11 00	9 80
500 cu.yd. Class D-1:4:8	10 00	11 00	10 00	9 00
4,000 sq.ft. reincreced concrete sheathing	2 00	1 00	1 00	60
500 cu.yd. brick masonry	18 00	30 00	20 00	15 00
200 cu.yd. hollow terra cotta brick masonry	18 00	25 00	20 00	15 00
100 cu.yd. rubble masonry	9 00	15 00	11 00	3 00
200 sq.yd. vitrified shale brick sewer lining	3 00	3 00	3 00	2 50
100 sq.yd. granite block sewer lining	3 00	3 00	3 00	3 00
Building New Manholes and Wellholes:				
12 manholes	130 00	150 00	150 00	60 00
100 vert.ft. wellholes	9 00	12 00	11 25	6 00
Building New Inlets:				
5 No. 1 inlets	150 00	200 00	150 00	100 00
5 No. 2 inlets	140 00	200 00	150 00	100 00
5 No. 3 inlets	125 00	200 00	150 00	100 00
5 No. 4 inlets	115 00	200 00	150 00	50 00
Taking Out and Rebuilding Inlets:				
5 inlets having standard pattern casting	125 00	150 00	125 00	40 00
5 inlets having old pattern casting to be replaced by standard	150 00	200 00	125 00	40 00
Flagstones:				
100 sq.ft. 2-in. thickness	30	50	40	40
100 sq.ft. 4-in. thickness	50	80	80	60
100 sq.ft. 6-in. thickness	75	1 50	1 00	80
100 cu.yd. dry rubble masonry or riprap	6 00	15 00	10 00	2 00
200 cu.yd. broken stone or gravel for drains	2 50	2 50	3 75	2 00
2,000 bags cement grout	1 10	1 00	1 00	1 25
3,500 sq.yd. granolithic finish	1 75	1 50	2 25	1 00
Fabric Waterproofing:				
7,500 sq.yd. 1-ply in asphaltic compound	70	1 50	1 20	70
500 sq.yd. 2-ply in asphaltic compound	1 00	2 50	2 20	1 10
500 sq.yd. 3-ply in asphaltic compound	1 40	3 50	2 55	1 50
500 sq.yd. 4-ply in asphaltic compound	1 80	4 50	3 35	1 90
7,500 sq.yd. 1-ply in coal tar pitch	65	1 00	1 00	70
500 sq.yd. 2-ply in coal tar pitch	95	1 50	1 70	1 10
500 sq.yd. 3-ply in coal tar pitch	1 30	2 00	2 40	1 50
500 sq.yd. 4-ply in coal tar pitch	1 60	2 75	3 10	1 90
2,000 sq.yd. 1-ply dry roofing felt	60	60	40	40
21,000 sq.yd. asphaltic mastic waterproofing	2 00	2 25	2 00	1 70
Brick in Waterproofing compound:				
1,200 cu.yd. in asphaltic compound	28 00	35 00	36 00	29 00
1,200 cu.yd. in coal tar pitch	26 00	35 00	30 00	29 00
Vitrified Clay Pipe:				
2,000 lin.ft. 4-in	40	50	40	30
2,000 lin.ft. 5-in. or 6-in	50	60	50	50
4,000 lin.ft. 8-in. or 10-in	60	1 00	70	50
500 lin.ft. 12-in	1 00	1 75	1 00	1 00
1,000 lin.ft. 15-in. or 18-in	1 50	2 75	2 00	3 00
100 lin.ft. 20-in	2 00	4 00	2 50	4 00
100 lin.ft. 24-in	2 50	5 00	3 00	5 00

	A	B	C	D
Extra Heavy Cast Iron Soil Pipe:				
300 lin.ft. 3-in	50	3 00	1 00	50
400 lin.ft. 4-in	80	3 50	1 50	60
1,000 lin.ft. 5-in	1 00	3 75	1 80	80
1,500 lin.ft. 6-in	1 25	4 00	2 00	1 20
Cast Iron Pipe Furnished:				
175 net tons bell and spigot straight	70 00	80 00	60 00	56 00
50 net tons bell and spigot special castings	120 00	125 00	120 00	100 00
25 net tons high-pressure straight	95 00	120 00	80 00	100 00
10 net tons high-pressure special castings	175 00	200 00	160 00	180 00
5 net tons high-pressure cast steel special castings furnished	220 00	350 00	300 00	300 00
Laying and Taking Out Cast Iron or Steel Pipe:				
225 net tons laying bell and spigot pipe, special cast. and fittings	50 00	40 00	30 00	18 00
30 net tons laying high-pressure pipe, special cast. and fittings	50 00	60 00	35 00	20 00
150 net tons taking out bell and spigot pipe, spec. cast. and fittings	15 00	30 00	24 00	7 00
30 net tons taking out high-pressure pipe, special cast. and fittings	15 00	50 00	35 00	7 00
25 net tons taking out and disposing of 48-in. steel pipe	20 00	20 00	35 00	7 00
Bell End Water Gate Valves:				
1 36-in. geared gate valve	1,100 00	1,200 00	1,000 00	920 00
4 30-in. geared gate valves	800 00	850 00	800 00	600 00
1 24-in. gate valve	400 00	550 00	600 00	300 00
4 20-in. gate valves	260 00	300 00	375 00	240 00
2 16-in. gate valves	180 00	200 00	300 00	130 00
5 12-in. gate valves	100 00	110 00	225 00	70 00
5 10-in. gate valves	72 00	90 00	150 00	50 00
4 8-in. gate valve	50 00	50 00	100 00	50 00
10 6-in. gate valves	30 00	35 00	75 00	35 00
5,000 lb. wrought iron or steel pipe, any size	15	10	10	08
Wrought Iron or Steel Pipe Conduit:				
2,500 lin.ft. ¾-in. or 1-in. enameled conduit	31	25	25	30
1,000 lin.ft. 1¼-in. or 1½-in. enameled conduit	36	40	40	40
500 lin.ft. 2½-in. galvanized conduit	60	70	60	60
5,000 lin.ft. 3-in. galvanized conduit	90	80	70	80
1,000 lin.ft. 3½-in. galvanized conduit	1 10	1 00	1 00	1 00
200 net tons hauling pipe and fittings to or from city storeyard	3 00	10 00	2 50	2 00
50,000 lb. miscellaneous iron castings	08	10	08	08
75,000 duct ft. terra cotta ducts	15	15	16	14
20,000 duct ft. relocating city ducts and conduits	50	1 00	1 00	20
Structural Steel:				
2,350,000 lb. steel columns	07	071	06	07
1,300,000 lb. steel I-beams used as columns	07	071	06	07
3,350,000 lb. steel I-beams and channels in roofs and floors	07	071	06	07
1,128,000 lb. riveted plate or lattice girders	07	071	06	07
50,000 lb. riveted struts and miscellaneous steel work	07	071	06	07
110,000 lb. tie rods, bolts, nuts, washers, dowels and anchor bolts	07	071	06	07
100 net tons interlocking steel sheet piling	120 00	125 00	80 00	120 00
Steel Pipe Piles:				
100 vert.ft. 12-in	8 00	7 00	6 00	4 00
1,000 vert. ft. 15-in	10 00	7 50	7 50	6 00
700,000 lb. steel reinforcing rods and bars	06	05	07	06
10,000 lb. steel wire lath, forms and anchors	20	15	25	20
2,000 sq.ft. steel ventilation gratings	2 50	2 00	1 50	80
100,000 sq.ft. painting steel work	10	07	07	05
3,500 sq.ft. safety treads	1 50	1 60	1 50	2 50
1,500 sq.ft. vault lights	1 75	1 65	1 50	1 50
Cartway Paving:				
20,00 sq.yd. aspha.t	4 00	4 00	4 00	3 50
100 sq.yd. new wood block	4 50	5 50	4 00	4 00
100 sq.yd. new granite block	4 00	5 00	4 00	4 00
100 sq.yd. new vitrified block	4 50	5 00	4 00	4 00
2,500 sq.yd. granolithic	2 00	2 00	3 00	1 80
100 sq.yd. brick	2 00	2 50	3 00	1 00
750 sq.yd. flagstone	2 50	2 00	25	1 00

SUBWAY, PHILADELPHIA, PA.

Contract No. 204

W. S. Twining, Dir. Dept. City Transit, 751 Bourse Bldg., received bids, Apr. 3, section Delivery Loop Subway in Broad St. from, (A) Keystone State Constr. Co., 704-9 Pennsylvania Bldg.; (B) Smith, Hauser & Mac Isaac, Inc., 18 East 41st St., New York; (C) Philadelphia Subway Constr. Co., Lincoln Bldg.; (D) Underpinning & Foundation Co., 290 Broadway, New York. The item bids were as follows:

	A	B	C	D
300,500 cu.yd. excavation above elevation zero	$5 50	$4 25	$3 80	$4 55
5,250 cu.yd. excavation below elevation zero	5 50	5 00	7 00	5 05
100,000 ft.b.m. yellow pine lumber	60 00	50 00	50 00	110 00
Underpinning:				
1,400 ft. front, buildings 5 stories or less in height	50 00	50 00	60 00	42 00
200 ft. front, buildings over 5 stories and less than 10 stories in height	100 00	75 00	100 00	60 00
50 ft. front, buildings 10 stories or over in height	125 00	150 00	140 00	90 00
500 cu.yd. additional masonry for underpinning	1 00	10 00	12 00	8 00
West End Trust building, lump sum	36,000 00	24,000 00	14,000 00	19,000 00
Girard Trust building, lump sum	30,000 00	26,000 00	60,000 00	18,000 00
Lincoln building, lump sum	51,000 00	40,000 00	54,000 00	20,000 00
Liberty building, lump sum	40,000 00	33,500 00	25,000 00	19,000 00
Real Estate Trust and Hallowell buildings, lump sum	51,000 00	60,500 00	65,000 00	31,000 00
North American building, lump sum	16,000 00	5,000 00	5,800 00	1,000 00
Land Title and Trust building, lump sum	86,000 00	91,000 00	118,000 00	39,000 00
Manufacturers' Club building, lump sum	33,000 00	10,000 00	16,000 00	2,000 00
Bellevue-Stratford Hotel building, lump sum	17,000 00	5,000 00	22,000 00	4,000 00
Ritz-Carlton Hotel building, lump sum	1,000 00	5,000 00	4,500 00	1,000 00
Art Club of Philadelphia building, lump sum	4,000 00	15,000 00	15,000 00	8,000 00
Walton Hotel building, lump sum	17,000 00	9,000 00	6,000 00	8,000 00
Stenton Hotel building, lump sum	5,000 00	10,000 00	3,000 00	8,500 00
Concrete Masonry:				
100 cu.yd. Class A-1:½:3	16 00	12 50	12 00	40 00
38,400 cu.yd. Class B-1:2:4	12 25	12 00	10 60	12 00
3,000 cu.yd. Class C-1:3:6	11 00	11 00	9 80	11 50
500 cu.yd. Class D-1:4:8	10 00	10 00	9 00	11 00
4,000 sq.ft. reinforced concrete sheathing	1 00	2 00	60	1 00
500 cu.yd. brick masonry	20 00	18 00	15 000	30 00
500 cu.yd. hollow terra cotta brick masonry	20 00	18 00	15 00	25 00
200 cu.yd. rubble masonry	11 00	9 00	3 00	15 00
100 sq.yd. vitrified shale brick sewer lining	3 00	3 00	2 50	3 00
100 sq.yd. granite block sewer lining	3 00	3 00	3 00	3 00
Building New Manholes and Wellholes:				
30 manoles	150 00	130 00	60 00	150 00
100 vert ft. wellholes	11 25	9 00	6 00	12 00
Building New Inlets:				
5 No. 1 inlets	150 00	150 00	100 00	200 00
5 No. 2 inlets	150 00	140 00	100 00	200 00
5 No. 3 inlets	150 00	125 00	100 00	200 00
5 No. 4 inlets	150 00	115 00	50 00	200 00
Taking Out and Rebuilding Inlets:				
25 inlets having standard pattern casting	125 00	125 00	40 00	150 00
5 inlets having old pattern casting to be replaced by standard	125 00	150 00	40 00	200 00
Flagstones:				
100 sq.ft. 2-in. thickness	40	30	40	50
100 sq.ft. 4-in. thickness	80	50	60	80
100 sq.ft. 6-in. thickness	1 00	75	80	1 50
100 cu.yd. dry rubble masonry or riprap	10 00	6 00	2 00	15 00
200 cu.yd. broken stone or gravel for drains	3 75	2 50	2 00	2 50
3,000 bags cement grout	1 00	1 10	1 25	1 00
9,200 sq.yd. granolithic finish	2 25	1 75	1 00	1 50
Fabric Waterproofing:				
7,100 sq.yd. 1-ply in asphaltic compound	1 20	.70	.70	1 50
500 sq.yd. 2-ply in asphaltic compound	2 20	1 00	1 10	2 50
500 sq.yd. 3-ply in asphaltic compound	2 55	1 40	1 50	3 50
500 sq.yd. 4-ply in asphaltic compound	3 35	1 80	1 90	4 50
7,000 sq.yd. 1-ply in coal tar pitch	1 00	.65	.70	1 00
500 sq.yd. 2-ply in coal tar pitch	1 70	95	1 10	1 50
500 sq.yd. 3-ply in coal tar pitch	2 40	1 30	1 50	2 00
500 sq.yd. 4-ply in coal tar pitch	3 10	1 60	1 90	2 75
2,000 sq.yd. 1-ply dry roofing felt	.40	60	.40	.60
24,000 sq.yd. asphaltic mastic waterproofing	2 00	2 00	1 70	2 25
Brick in Waterproofing Compound:	A	B	C	D
1,000 cu.yd. in asphaltic compound	36 00	28 00	29 00	35
1,000 cu.yd. in coal tar pitch	30 00	26 00	29 00	35
Vitrified Clay Pipe:				
3,700 lin.ft. 4-in	40	40	30	
2,000 lin.ft. 5-in. or 6-in	50	50	50	
1,500 lin.ft. 8-in. or 10-in	70	60	50	1
1,000 lin.ft. 12-in	1 00	1 00	1 00	1
4,000 lin.ft. 15-in. or 18-in	2 00	1 50	3 00	2
100 lin.ft. 20-in	*2 50	2 00	4 00	4
100 lin.ft. 24-in	3 00	2 50	5 00	5
Extra Heavy Cast Iron Soil Pipe:				
300 lin.ft. 3-in	1 00	50	50	3
500 lin.ft. 4-in	1 50	80	60	3
1,000 lin.ft. 5-in	1 80	1 00	80	3
2,000 lin.ft. 6-in	2 00	1 25	1 20	4
Cast Iron Pipe Furnished:				
250 net tons bell and spigot straight	60 00	70 00	56 00	80
75 net tons bell and spigot special castings	120 00	120 00	100 00	125
25 net tons, high-pressure straight	80 00	95 00	100 00	120
10 net tons high-pressure special castings	160 00	175 00	180 00	200
5 net tons high-pressure cast steel special castings furnished	300 00	220 00	300 00	350
Laying and Taking Out Cast Iron or Steel Pipe:				
300 net tons laying bell and spigot pipe, spec. cast and fittings	30 00	50 00	18 00	40
50 net tons laying high-pressure pipe, spec. cast. and fittings	35 00	50 00	20 00	60
25 net tons taking out bell and spigot pipe, spec. cast. and fittings	24 00	15 00	7 00	30
50 net tons, taking out high-pressure pipe, spec. cast. and fittings	35 00	15 00	7 00	50
100 net tons, taking out and disposing of 48-in. steel pipe	35 00	20 00	7 00	20
Bell End Water Gate Valves:				
2 36-in. geared gate valve	1,000 00	900 00	920 00	1,200
3 30-in. geared gate valves	800 00	600 00	600 00	850
1 24-in. gate valve	600 00	400 00	300 00	550
2 20-in. gate valves	375 00	260 00	240 00	300
2 16-in. gate valves	300 00	180 00	130 00	200
4 12-in. gate valves	225 00	100 00	70 00	110
4 10-in. gate valves	150 00	72 00	50 00	90
4 8-in. gate valves	100 00	50 00	50 00	50
6 6-in. gate valves	75 00	30 00	35 00	35
5,000 lb. wrought iron or steel pipe, any size	.10	.15	.08	
Wrought Iron or Steel Pipe Conduit:				
5,000 lin.ft. ¾-in. or 1-in. enameled conduit	.25	.30	.30	
2,000 lin.ft. 1¼-in. or 1½-in. enameled conduit	.40	.36	.40	
500 lin.ft. 2½-in. galvanized conduit	.60	60	.60	
5,000 lin.ft. 3-in. galvanized conduit	.70	.90	.80	
1,000 lin.ft. 3½-in. galvanized conduit	1 00	1 10	1 00	1
100 net tons hauling pipe and fittings to or from city storeyard	2 50	3 00	2 00	10
50,000 lb. miscellaneous iron castings	.08	.08	.08	
60,000 duct ft. terra cotta ducts	.16	.15	.14	
20,000 duct ft. relocating city ducts and conduits	1 00	.50	.20	1
Structural Steel:				
2,500,000 lb. steel columns	.06	.07	.07	
1,300,000 lb. steel I-beams used as columns	.06	.07	.07	
5,300,000 lb. steel I-beams and channels in roofs and floors	.06	.07	.07

300 ft. 6-in. tile sewer	1 00	1 00	20	90
Concrete outlet (lump sum)	915 00	700 00	1,000 00	1,650 00
Manholes, etc	3,325 00	2,180 00	4,110 00	6,195 00
Extended totals	$61,950	$64,520	$64,660	$112,590

Louis L. Brown Co., Inc., have just opened offices at 30 Church St., New York City, and will specialize in foundation by open and pneumatic methods, shoring and underpinning, concrete, masonry and timber construction, etc. The firm is comprised of Louis L. Brown, formerly vice-president of the Foundation Co., and James H. Small, Jr., formerly chief engineer of Patrick Ryan Constr. Corp.

Thomas G. Bush & Co., sales agents and special contractors, Paulsen Building, Spokane, have arranged with the Hodson-Feenaughty Co. to handle the road machinery and contractor's equipment manufactured by the Austin-Western Road Machinery Co. and its associate companies.

The Blaw Steel Construction Company has opened Pacific Coast offices at San Francisco in the Rialto Building with Edward M. Ornitz in charge.

The Braemer Air Conditioning Corporation of Philadelphia announces the opening of a New York Office at 90 West St. with G. P. Uppington as District Manager. Mr. Uppington is a Graduate Engineer with 11 years' practical experience in heating, ventilating, air-conditioning and sales work, and well qualified for his new position.

The Elgin Sales Co., 605 South Dearborn St., Chicago, and 140 West 38th St., New York, has taken over the selling agency of the Elgin Street Sweeper Co., maker of motor-driven outfits. George C. Dodge is in charge at New York and A. M. Anderson at Chicago.

S. B. Newman and M. F. Cavallon, who have been associated with the Master Builders Co., announce that they have entered into business to sell building products under the name of the Newman-Cavallon Co., Inc., 8 West 40th St., New York, N. Y.

W. T. O'Brien, manager of the Railway Equipment Co., Portland, Oregon, announces his plant will be moved to a site recently secured in Linnton.

J. L. Stannard, Cons. Engr., announces the removal of his office from the Corbett Bldg. to 504-5-6 Selling Bldg., 6th and Alder St., Portland, Ore.

PREPAREDNESS

The effect of the preparations for war is beginning to appear in the purchases of the Navy Department, though with the exception of a few materials and articles the purchases have not yet passed beyond the ordinary routine requirements. Awards have been made for nearly 200 of the submarine chasers or patrol boats for which bids were opened on Mar. 31. The average price is about $45,000 and the awards have been split up among a large number of bidders, no bidder receiving more than 20. An additional number will be built at the New York Navy Yard. Heavy duty gasoline engines are being ordered for these boats, the type selected being that known as the "Standard." The engines will be installed by the Government.

A large order for steel nets for use against submarines was placed with the American Steel and Wire Co. at $625 each for 100. The type of net is smaller than that recently ordered from the same company. An order for 1,500,000 lb. of trinitrotoluol was divided before the Burton-Richards Co. and the E. I. du Pont de Nemours Powder Co., the price being about 36c. a pound. A very large emergency order for alcohol for immediate delivery to Indian Head Naval Proving Ground was placed with James A. Webb & Co., New York, at 50.7c. per gallon, which is much below the previous prevailing price on alcohol for naval use.

Bids were also opened for a large quantity of brass, copper and bronze, in angles, ingot and pipe. Most of this material is desired for construction of vessels.

The Bureau of Yards and Docks is purchasing without advertising in what is known as open market purchase a large quantity of transportation material, such as cars, trucks, locomotives and cranes, deliveries being desired at the various yards.

The Bureau of Ordnance has opened bids for a large number of shell ranging from the armor-piercing 16-in. shell down to 1-pounders. No awards have been made. They have also opened bids for 1,470,000 copper cartridge cases for 4-in., 3-in. and 1-pounder guns. Awards have not been made but will aggregate several million dollars. Bids are now asked for copper stowage boxes and wooden ammunition cases for shell and powder which will call for the execution of large contracts.

Bids have been opened for the construction of 48 submarine torpedo boats, but as usual competition is confined to the Electric Boat Co. and the Lake Torpedo Boat Co., with a bid from the California Shipbuilding Corporation on the Lake design. The prices quoted range from $1,300,000 to $1,500,000.

In the Army, owing to the failure of Congress to act upon the Appropriation Bill, comparatively little emergency purchasing is being done, but plans are being made for stimulating purchasing as soon as the money is available.

Much interest is being taken in the plans of the Shipping Board to construct a large number of wooden vessels of about 2000 tons each but little progress is being made towards anything definite in the accomplishment of this scheme.

A Record Order for Wire Mesh Reinforcing is announced by Albert Oliver & Son, Inc., sales agents for the Clinton Wire Cloth Co.'s structural products. The Fireproof Contractors' Corporation has ordered 1,060,000 sq.ft. of Clinton electrically welded fabric for the floors and roof of the new Commodore Hotel, New York City. The date of first delivery is June 1, and it is expected that the entire order will be completed in five months from that date.

SEARCHLIGHT SECTION

PROPOSALS

Bids received until May 3, 1917.

Dam Raising

OFFICE OF THE BOARD OF STREET AND WATER COMMISSIONERS OF THE CITY OF NEWARK.
City Hall,
Newark, N. J., April 14, 1917.

Sealed proposals will be received from 3:15 to 3:30 o'clock P.M. on Thursday, May 3, 1917, at a public meeting of the Board of Street and Water Commissioners to be held at its office in the City Hall, Newark, New Jersey, at said time, for the

RAISING OF THE DAM OF THE OAK RIDGE RESERVOIR,

for the Water Department of the City of Newark, situated near Oak Ridge, Passaic County, New Jersey, and the bids for said work will be opened and publicly read at the last-named hour.

The following is a statement based upon the estimate of the Engineer of the amount of work to be done and the materials to be furnished in the construction and completion of said work, and upon which the several bids will be computed, tested and canvassed by the quantities mentioned:

6450 cu.yds. of earth excavation 0 to 4 feet deep;

150 cu.yds. of earth excavation 4 to 20 feet deep;

1035 cu.yds. of rock excavation to the depths shown on the plans;

43,500 cu.yds. of borrowed earth;

50 cu.yds. of clay puddle;

4000 cu.yds. of slope paving to be removed;

900 cu.yds. of concrete deposited without the use of forms;

3235 cu.yds. of concrete deposited in forms;

3260 lbs. of sheet lead;

200 lineal feet of six (6) inch agricultural tile;

Removing and replacing deck of gatehouse (a lump sum);

Furnishing and erecting a stairway (a lump sum).

These quantities are approximate only, being given as a basis for a uniform comparison of bids, and the board does not expressly or by implication agree that the actual amount of work will correspond therewith.

Each proposal must be inclosed in a sealed envelope indorsed "Proposal for the Raising of the Oak Ridge Dam," with the name of the bidder and directed to the Board of Street and Water Commissioners of the City of Newark, New Jersey.

The prices of bidders must be written in words and also stated in figures in the form of bid, and all bids will be considered as informal which do not contain prices set oposite all the items which are called for in the form of bid.

Proposal must be accompanied by the consent in writing of two sureties, residents of Essex County, New Jersey, or a surety company authorized to do business in New Jersey, who shall qualify as to their responsibility in the amount of the proposal, and agree to become sureties for the faithful performance of the contract, if awarded.

The plans and specifications for the proposed work can be examined at the office of the Engineer and Superintendent of the Bureau of Water of the Board of Street and Water Comissioners at No. 317 Halsey Street. Copies of the plans and specifications may be obtained upon the deposit of a certified check for $10. This check will be returned to the bidder upon the return of the plans and specifications on or before the day fixed for the receipt of bids.

Blank form of proposals which must be used in submitting bids will be furnished upon application to said office.

The contract is to be awarded to the lowest bidder, the board reserving the right to reject any or all bids.

INFORMATION FOR BIDDERS.

The work is located at the lower end of the Oak Ridge Reservoir in the Township of Jefferson, Morris County, and the Township of West Milford, Passaic County, New Jersey. The nearest railroad station is Oak Ridge on the New York, Susquehanna & Western Railroad.

The work to be done consists of building a small dam, a concrete overflow dam, concrete retaining walls and making such alterations in the present dam and gatehouse that the flow line of the reservoir may be raised ten feet. Bidders are advised to visit the site of the work and satisfy themselves as to the character of the ground and the work to be done. An employee of the Board of Street and Water Commissioners will be on the site of the work for twelve (12) days after the date of this advertisement, with the exception of Sundays, between the hours of 8 A.M. and 4 P.M., to show the bidders the location of the various parts of the work.

The sanitary regulations and the provisions relating thereto as set forth in paragraphs J, K, L and M of the contract and specifications, are particularly brought to the attention of bidders.

By direction of the board.

MORRIS R. SHERRERD,
Chief Engineer.

Official Proposals

Price, $3.60 an inch—Copy can be received until Wednesday, 10 a. m. for issue mailed the next day

Bids received until Apr. 20, 1917.

Concrete Pavement

Sarnia, Ont., Canada.

Sealed Tenders addressed to the City Engineer, Sarnia, Ontario, will be received up to 5 o'clock P.M., the 20th day of April, 1917, for the construction of a 30-ft. Concrete Pavement on the London Road from Christina to Russell Streets, in the City of Sarnia.

Plans, Profile, Specifications and Forms of Tenders may be seen at the office of the City Engineer, City Hall, Sarnia.

The lowest or any Tender not necessarily accepted.

JOHN A. BAIRD, City Engineer.
Sarnia, 12th April, 1917.

PROPOSALS

Bids received until Apr. 26, 1917.

Earth Dam, Etc.

Fitchburg, Mass.

Sealed bids or proposals for building an earth dam, 225 ft. long, with a maximum height of 30 ft. with a reinforced concrete curtain wall, spill way, gate house, iron pipe outlet and appurtenances; also the reconstruction of a portion of the town road, and building a concrete culvert thereon; addressed to the Board of Water Commissioners, Fitchburg, Mass., and endorsed, "Proposals for Compensating Reservoir," will be received at the office of the Board, City Hall, Fitchburg, until 2 p.m. on Thursday, the 26th day of April, 1917.

At this time and place said proposals will be opened and read in public.

Each bid must be accompanied by a certified check drawn on a National bank or Trust Company, established in the state of Massachusetts, or city of New York, for $1000, payable to the City of Fitchburg. The successful bidder will be required to furnish a bond in the sum of $10,000 with a Surety Company, satisfactory to the Commissioners. Detailed drawings, form of contract, and specifications may be obtained at the office of the Water Commissioners, or at the office of the Commissioner of Streets and Engineering, Fitchburg. A deposit of $5 will be required on plans and specifications taken from either office. Such deposit will be refunded upon the return of the plans and specifications.

The Water Commissioners reserve the right to reject any or all bids or to accept any bid which they deem to be to the interest of the City of Fitchburg.

Signed: THOMAS C. SHELDON,
ARTHUR A. TRAIN,
Water Commissioners.
GUY H. CHASE,
Comr. of Streets and Engineering.

Bids received until May 5, 1917.

Sewer Construction

Phoenixville, Pa.

The Borough of Phoenixville, South District, through its Sewer Committee, will receive bids until Saturday Evening, May 5th, 1917, at 8 o'clock, for the construction of a 24-in. sewer on Gay Street, Phoenixville, Pa., from Church Street to French Creek, a distance of approximately Nine Hundred and Eight Feet (908). Plans and specifications may be seen at the office of C. H. Keeley, Borough Clerk, North Main Street, Phoenixville, Pa. The Committee reserves the right to reject any or all bids.

CHAS. F. BADER,
E. A. BARKLEY,
JONATHAN DAVIS,
Sewer Committee.

Bids received until May 8, 1917.

Brick Paving

Vincennes, Ind.

Knox County will receive bids May 8 for 43,000 sq.yds. Brick Paving, 6 miles Rolled Stone Roads and 5½ miles Gravel Roads.

WINN H. REEL,
County Engineer, Vincennes, Ind.

S. to prepay freight charges on empty cement sacks and return same within 90 days after purchase, (2) 10c.; Universal Portland Cement Co., Frick Bldg., Pittsburgh, (1), $2.25 per bbl.; not on bin tested, but guaranteed to conform to our specifications. Bin inspected cement will be furnished when it can be done without interference with prior obligations at rate of $2.28 per bbl.; (2) 10c. Noted Apr. 5.

Lockkeepers Houses—U. S. Engr. Office, Wheeling, received low bids, two 2-story, 14-room houses at each of dams Nos. 23, 25 and 27, Ohio River and one 2-story, 14-room double house at Dam No. 22, Ohio River, from E. N. Everson, Brilliant, O., and R. A. Miller, Middleport, O.

Dredging—Ga., Savannah—U. S. Engr. Office, Savannah, received bids, Apr. 14, dredging 21-ft. channel, Savannah Harbor from P. Sanford Ross, Inc., 277 Washington St., Jersey City, N. J., $165,040; Globe Dredging Co., Savannah Bank & Trust Bldg., Savannah, $171,600; Bowers Southern Dredging Co., Galveston, Tex., $172,400.

Stone Riprap—Mich., Harbor Beach—U. S. Engr. Office, Detroit, received bids furnishing and placing, along lake front of main and south breakwaters, from T. L. Durocher, Box 1000, Marquette, $156,590, and Great Lakes Dredge & Dock Co., Monroe Bldg., Chicago, $202,520. Noted Apr. 5.

Canal Work—Mont., St. Ignatius—U. S. Rec. Ser., St. Ignatius, received low bids Apr. 5 laterals on Flathead Project as follows: (a) Schedule 1, (b) Schedule 2, (c) Schedule 3, (d) Schedule 4, (e) Schedule 5, (f) Schedule 6, from J. A. Fletcher & Co., Seattle, (a) $22,745, (b) $23,892, (c) $15,455, (d) $12,245; Ball & Jaffe, Seattle, (a) $15,690, (b) $14,782, (c) $10,660, (d) $7065; Pearson Constr. Co., New York City Bldg., Seattle, (a) $19,815, (b) $23,582, (c) $15,815, (d) $10,555, (e) $9495, (f) $5452; F. Meers, St. Ignatius, (f) $4202; Higgins & Ross, Polson, (a) $17,225, (b) $19,717, (c) $13,177, (d) $8872; Mendenhall, Bird Co., Springfield, Utah, (a) $17,397, (b) $16,647, (c) $11,727, (d) $7610, (e) $6475, (f) $3652.

Post Office—N. M., Las Cruces—J. A. Wetmore, superv. archt., Treasury Dept., Wash., received bids, Apr. 20, limestone, from Latimer & Benning, Massachusetts Bldg., Kansas City, Mo., $88,743. W. D. Lovell, 415 8th St., S. E., Minneapolis, $90,600; W. O'Neill Sons Co., Faribault, Minn., $92,955; only bid on sandstone from E. Schuler, Pasadena, Cal., $108,745.

Buildings—Alaska, Seward—Bureau Yards and Docks, Navy Dept., Wash., received only bid radio and masts at naval radio station from Martin & Dugan Constr. Co., 627 Northern Bank Bldg., Seattle, $58,000. Noted Apr. 5.

MISCELLANEOUS

Proposed Work

Wharf—Mass., Malden—See "Industrial Works."

Subway—N. Y., Olean—Traffic Com. of Chamber of Commerce, submitted plan to city for subway on North Union St. at Pennsylvania R.R. crossing to improve traffic conditions. W. Abrams, secy. com. A. C. Shand, Broad St. Station, Phila., ch. engr. of R.R.

Piers—N. J., Jersey City—City plans series of piers on 250 acres property on Hudson River shore in Caven Point Dist. C. A. Van Keuren, city engr.

Playgrounds—N. J., Jersey City—Dept. Pub. Grounds and Bldgs. plans playgrounds at Bergen Ave., Henderson, 8th, Bright and Maxwell St., also improving Riverview Park. C. A. Van Keuren, city engr.

Park Improvements—Pa., Phila.—City plans improving park at 24th St., Passyunk Rd. and Snyder Ave.; also park at McKean Pkwy., Snyder Ave. and 24th St. G. S. Webster, engr. dept. pub. wks.

Playground—Pa., Phila.—City plans, Lombard, South, 9th and 10th St. G. S. Webster, engr. dept. pub. wks.

Station Platform—Pa., Phila.—See "Structural Steel."

Fire Alarm System—Fla., Orlando—City voted $10,000 bonds to install fire alarm system, $60,000 to build municipal building and $60,000 to pave streets.

Docks and Terminals—Ala., Mobile—W. Smith, city engr., prepared plans docks and terminals on city property, including bulkhead and pier, apron wharf and breakwater pier, retaining wall, dredging of 30-ft. channel and railroad tracks to connect with railroad system of city. About $503,470, excluding about $100,000 necessary for railway sheds and equipment.

Dock—Wis., Milwaukee—See "Reinforced Concrete."

Levee and Terminal Warehouse—Ia., Muscatine—City Council plans to spend $25,000 to build on river. C. H. Young, engr.

Park Improvements—Okla., Tulsa—See "Streets and Roads."

Tunnel—Cal., Los Angeles—(Official)—Bd. Pub. Wks. rejected only bid received Mar. 26, Bunker Hill at 2nd St. from Hill to Figueroa St. and will probably readvertise. Noted Apr. 12.

Tunnel—Cal., Sierra City—Sierra Mining Co. plans 4000-ft. About $40,000.

Bids Desired

Retaining Walls—Conn., Bristol—See "Streets and Roads."

Ballast—N. Y., New York—Until May 9 by Pub. Ser. Com. for 1st Dist., 120 Broadway, supply of ballast for use in construction of rapid transit railroads. O. Straus, chn.

Garbage Incinerator—N. J., New Brunswick—(Official)—Until May 8 by Bd. Comrs.; advertised in this issue.

Foundations—Pa., Phila.—(Official)—Until May 1 by W. S. Twining, dir. dept. city transit, 754 Bourse Bldg., for 168 column foundations in Frankford Ave. from Unity St. to Dyre St. Frankford Elevated Ry., Contract No. 503.

Revetment Wall—O., Cincinnati—Until May 4 F. E. Wesselmann, pres. bd. co. comrs., on Clough Rd. No. 358, at State Rd. No. 381, Anderson Twp., specification No. 984.

Turbine and Generator—Ill., Lockport—(Official)—Until May 17 by J. McGillen, clk., Sanitary Dist. of Chicago; advertised in this issue.

Prices and Contracts Awarded

(★Indicates award of contract)

★**Shipways—Mass., Quincy**—See "Structural Steel."

★**Elimination of Grade Crossing—N. Y., Buffalo**—Grade Crossings Comn. let contract for Erie R.R. at Louisiana St., substructure to Eastern Concrete Steel Co., Morgan Bldg., $92,500.

N. Y., New York—(Official)—Station Finish—Pub. Ser. Comn. for 1st Dist., received low bids, Apr. 18, station finish on portion Park Pl., William and Clark St. Subway, from J. B. Roberts, 3 West 29th St., $139,919; Seventh Ave. Contr. Co., 335 West 16th St., $142,986; Snare & Treist Co., Woolworth Bldg., $145,860. Noted Apr. 5.

★**Pavilion, etc.—N. J., Ocean City**—(Official)—City let contract addition to music pavilion and boardwalk to Allen Scull, Ocean City, $18,744.

★**Culverts—N. D., Schafer**—(Official)—County let contract about 120 culverts to Northwestern Steel & Mach. Co., Wahpeton.

★**Retaining Wall—Mo., Kansas City**—See "Reinforced Concrete."

★**Fill—Ore., Portland**—Oregon-Washington R.R. & Navigation Co., Wells Fargo Bldg., let contract earthen fill, near Weston and Blue Mountain, on Pendleton-Walla Walla line, to Grant Smith & Co., Henry Bldg., Seattle, $110,000; 300,000 yd. fill, near Alto, on Walla Walla-Starbuck Line, to General Construction Co., North 1324 Elm St., Spokane, $80,000; fill at Rufus on main line along Columbia River to A. Guthrie & Co., Inc., Peninsula Tunnel, Portland, $25,000.

★**Pierhead—Ont., Toronto**—Toronto Harbor Comn. let contract covering 6000-ft. western portion of harbor, to R. Weddell & Co., Spadina Ave., Port Arthur Constr. Co. and J. O. Roddick. About $600,000.

The Quartermaster Dept., War Department, has prepared plans and specifications for the construction of cantonments to be located throughout the country to accommodate the new Natl Army when it is brought into being. The plans have been drawn for some time but the Department is taking no active steps at the present time for the reason that as yet no money has been appropriated and the sites for the proposed camps have not yet been selected. Preparations are being made however to accommodate 1,000,000 men. The buildings are to be of a one-story type, and in metal, concrete, or wood in accordance with local requirements and the degree of permanency of the camp. The estimated cost of construction of these cantonments is about $75,000,000, including hospitals, roads, sewers and water systems. Nothing has been done as yet towards securing bids for the work, but it is expected that bids will be asked on the basis of construction of each camp by one contractor rather than by several contractors furnishing material and supplies.

PRICES and CONTRACTING NEWS

Of Special Interest to Engineers, Contractors, Builders and Manufacturers of Engineering and Building Supplies

Price advances are indicated by **heavy type**; declines by *italics*.

IRON AND STEEL

Pig Iron—Below are the present quotations, with a comparison of a month and a year ago:

	Apr. 30, 1917	One Month Ago	One Year Ago
CINCINNATI

★Wharf—Three Rivers, Que.—Canadian Iron Corp., St. Maurice St., let contract to C. Page, Des Anges St., $19,000.

Cardinell-Vincent Co.—George Vincent's holdings in the Cardinell-Vincent Co., of San Francisco, have been purchased by J. D. Cardinell, the president, who announces that the company's policy will remain unchanged. Ten years ago Mr. Vincent's experiments with "Vellum" tracing paper terminated in a commercial product, which was sold for a time in a desultory fashion by Mr. Cardinell, then a commission salesman operating in the vicinity of San Francisco. A year or two later the paper was introduced in the East, the price per roll of 20 yd. being $6, which was almost as high as the price of tracing cloth. The price of the paper has been reduced and its production has increased steadily. It is the company's present intention to supply the paper in sheets of various sizes, and Mr. Cardinell expects to visit New York in the near future for the purpose of purchasing the necessary machinery for cutting the paper into sheets.

The American Bridge Co. has removed its local offices to the Guardian Bldg., Cleveland, O.

Flad-Humphrey Engineering Co., St. Louis, Mo., incorporated to engage in the general practice of engineering. E. Flad, H. H. Humphrey and W. R. Humphrey, incorporators.

Pocatello Engineering and Machinery Co., Salt Lake City, Utah, incorporated by R. P. Fairbanks, W. J. Cruse and H. R. Waldo.

John J. White, La Crosse, Wis., and **Louis A. Geupel**, Evansville, Ind., have formed a partnership in La Crosse to engage in the general contracting business.

Few Bidders for Treasury Buildings—There has been a very noticeable falling off in the number of bidders for post-offices and other buildings constructed under the office of the Supervising Architect of the Treasury, as noted in last week's issue. Formerly for a post-office of the usual size—that is, costing $50,000 or the average—there were regularly form eight to ten bidders. This number has now dropped to an average of two or three bidders, in many cases only a single bid being received. The largest number of bids received for any one post-office since Apr. 1 has been six.

There is a marked tendency on the part of contractors to decline to bid on this class of work even on the part of those who habitually bid on post-office contracts. The change has taken place since the declaration of war and is undoubtedly due to the fear of war conditions. The contractors seem to be afraid to undertake any construction work for the government on account of the severe penalties for delay and non-performance. No ill effect has been sustained by the Supervising Architect's Office up to the present time, as it is within their province to make awards to contractors even if they are the only bidder, provided their bid is within the amount available, but it can easily be seen that if the tendency continues it may be impossible to obtain bids for post-offices.

The World's Largest Lumber Order is said to have been placed recently by the United States Government with the Southern Pine Association to meet the war requirements for wooden ships, army barracks, etc. The Government has contracted for the purchase of more than two billion feet of Southern pine at a price of from $35,000,000 to $40,000,000. The total output of all the Southern Pine mills of Louisiana (the most important pine state) in 1915 was only 2.9 billion feet. The lumber will be delivered as required, deliveries extending over a period of several months. The Southern Pine Association has established a branch office in Washington, D. C., so that it may remain constantly in touch with the Government. Mills which will participate in the contract are located in the Southern States, and are said to include nearly all the members of the Southern Pine Association, the combined monthly output of whose plants averages 450,000,000 feet.

Beery Engineering Co., Inc., Rockford, Ill., has been incorporated to carry on a general engineering and construction business.

Canada Cement Co. has been taken over by a new company organized by C. C. Laplerre, Montreal, Que., who will operate the plant.

Josiah Tice Engineering & Surveying Corp., New Brunswick, N. J., has been incorporated to engage in the general practice of engineering and surveying. John T. Hopkins, J. W. Parsons, Highland Park; W. H. Baker, Deans, F. E. Tice, New Brunswick, incorporated.

BARGE CANAL WORK, ALBANY, N. Y.

Contract No. 138

Bids were received by W. W. Wotherspoon, Supt. Pub. Wks., Capitol, for Barge Canal Work, Contract No. 138, improving Erie, Oswego and Champlain Canals, from (A) Combined Construction Co., Rochester; (B) MacArthur Bros. Co., 120 Broadway, New York; (C) Lupfer & Remick, Ellicott Bldg., Buffalo. The unit bids were as follows:

	A	B	C
11,100 cu.yd. excavation	$1.80	$2.50	$2.00
46 M ft.b.m. sheeting and bracing	55.00	75.00	65.00
2,400 lin.ft. round timber bracing	.25	.40	.30
700 sq.ft. channeling	.60	1.00	.56
820 lin.ft. drilling holes in rock	1.20	1.00	1.00
1,800 cu.yd. forming embankment	.18	.25	.15
16 M ft.b.m. sawed lumber, yellow pine	70.00	90.00	80.00
5 M ft.b.m. sawed lumber, white oak	120.00	120.00	120.00
103 cu.yd. first-class concrete	12.00	15.00	14.00
7,370 cu.yd. second-class concrete	7.50	8.50	9.40
1,070 cu.yd. first-class concrete—reinforced	10.00	15.00	15.00
920 cu.yd. second-class concrete—reinforced	9.00	11.00	11.50
520 lin.ft. 18-in. vitrified pipe, laid	1.32	1.50	1.30
500 lin.ft. 8-in. vitrified pipe, laid	.42	.50	.40
230 lin.ft. 6-in. vitrified pipe, laid	.24	.30	.22
1,510,000 lb. structural steel	.088	.098	.098
90,500 lb. metal reinforcement	.06	.06	.06
30,000 lb. w. i. chains for Mohawk dam	.12	.15	.12
13,300 lb. pipe railing	.18	.20	.16

Extended totals	$159,739	$159,265	$160,211

SEARCHLIGHT SECTION

Contracts To Be Let

PROPOSALS

Bids received until May 29, 1917

Canal Work

STATE OF NEW YORK, SUPERINTENDENT OF PUBLIC WORKS

Albany, April 27th, 1917.

Sealed proposals will be received by the undersigned at his office in the Capitol at Albany, N. Y., until twelve o'clock noon of Tuesday, May 29th, 1917, at which place and hour they will be publicly opened and read, for improving the Cayuga and Seneca canal pursuant to the provisions of Chapter 391 of the Laws of 1909, and Chapter 147 of the Laws of 1903, and amendatory laws, and for improving the New York State canals pursuant to the provisions of Chapter 147 of the Laws of 1903, and of the acts amendatory thereof and supplementary thereto, and Chapter 570 of the Laws of 1915, as follows:

—1—

CONTRACT "P."

Cayuga and Seneca Canal—Section 1.

For constructing a concrete cut-off wall below the walls of Lock No. 3, Seneca Falls.

Sheets 1 and 2.

—2—

CONTRACT NO. 144.

Erie Canal—Section 9.

For constructing two concrete bridges over Red creek in Genesee Valley Park, Rochester.

Sheets 1 to 10, inclusive.

And for the construction of Barge canal terminals pursuant to the provisions of Chapter 746 of the Laws of 1911, and of the acts amendatory thereof, as follows:

—3—

TERMINAL CONTRACT NO. 44.

For constructing a Barge canal terminal at Mott Haven, near East 138th street, borough of the Bronx, New York.

Contract plans, sheets 1-9.

Plans may be seen and detailed specifications, engineer's estimate of quantities, proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y., at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y., at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office, Spaulding's Exchange, Buffalo, N. Y.

Copies of detailed plans or drawings may be obtained from the State Engineer and Surveyor at Albany, N. Y., upon payment to him of the cost of producing them.

Monthly estimates will be paid of ninety per centum (90 per cent.) of the work done at the contract price. Every proposal for said work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the city of Albany or New York, issued by a national or state bank (or trust company in the case of terminal contract) in good credit within the state and payable at sight to the Superintendent of Public Works for five per centum (5 per cent.) of the amount of the proposal.

The person whose proposal shall be accepted will be required to execute a contract and furnish bonds within ten days from the date of notice of award delivered to him or them in person or mailed to the address given in the proposal.

Upon execution of the contract and approval of bonds, the certified check or draft will be returned to the proposer unless the same shall have been presented for collection prior to such time, in which case the amount of the deposit will be refunded by the Superintendent of Public Works.

The deposits of bidders other than the one to whom the award of contract shall be made will be returned immediately after the award has been made.

The bond required for the faithful performance of each contract shall be in such sum as shall be fixed by the Superintendent of Public Works, which sum shall not be less than twenty per centum (20 per cent.) of the estimated cost of the work according to the contract price, and an additional bond, known as the labor bond, in the sum of ten per centum (10 per cent.) of the amount of the estimated cost of the work according to the contract price, will be required as security that the contractor will pay in full at least once in each month all laborers employed by him upon the work specified to be done in the contract.

In the event that more than one surety company is offered as surety on said bonds co-insurance only will be accepted.

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work, and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned, the interests of the state will be enhanced thereby.

W. W. WOTHERSPOON,
Superintendent of Public Works.

UNITED STATES ENGINEER OFFICE, Room 710 Army Building, 39 Whitehall Street, New York, N. Y.—Sealed proposals for dredging in Hudson River, N. Y., will be received here until 12 M., June 11, 1917, and then opened. Further information on application.

Official Proposals

Price, $3.60 an inch—Copy can be received until Wednesday, 10 a. m. for issue mailed the next day

PROPOSALS

Bids received until May 28, 1917.

Highway Work

California—State Highway Comn., Sacramento, received low bids building 2.9-mi. grading on state highway between Las Cruces and Gaviota Pass, Santa Barbara Co., from I. Hodson, San Luis Obispo, $59,950; R. Sherer, P. E. Bldg., Los Angeles, $61,551; Sandercock Transfer Co., San Luis Obispo, $63,065.

★**Que., St. Augustin**—Council let contract building roads to Lagamere, Honde & Cie, Grandmere, $14,000.

★**Man., Wallace**—City let contract grading 18½ mi. road to A. R. Boivin, 167 Notre Dame E, Winnipeg, $19,500.

RAILWAYS—STEAM AND ELECTRIC

Proposed Work

Pennsylvania—Hershey Transit Co. completing surveys for extension from Hershey to Manheim. J. B. Leithiser, Hershey, genl. mgr.

Alabama—Receivers of Gulf, Florida & Alabama Ry. asked W. B. Sheppard, judge, for authority to borrow $500,000 on receivers' certificates for extending and improving main line, constructing sidings and spur tracks to industrial plant, purchase of necessary rolling stock and other improvements. J. P. Lynahan, Pensacola, Fla., supt.

Michigan—M. Polasky, Alma, is reported interested in electric railway to be built from Lansing to Mount Pleasant, via Alma.

Illinois—Illinois Terminal R.R having surveys made for line from Edwardsville to O'Fallon, which will eventually be extended to East Caron-delet. Estimated cost of entire line, $3,000,000. H. H. Rodgers, Alton, engr. M. W.

Illinois—Chicago, Fox Lake & Northern Electric Ry. will soon begin construction on line from Evanston to Palatine, via Niles Center, Park Ridge, Mt. Prospect and Arlington Heights. Company will take over Palatine, Lake Zurich & Wauconda R.R., operating steam line from Palatine to Wauconda; from Wauconda new line will be built to extend north to Volo (Round Lake P. O.), Fox Lake, Lake Geneva, Wis., and Antioch, then west and north to Elkhorn and Jefferson, Wis. L. K. Sherman, 6418 South Sangamon St., Chicago, ch. engr.

Illinois—Chicago, Springfield & Cairo Ry. made application to State Pub. Utilities Comn. for certificate of convenience and necessity to build railway south from Springfield to Cairo, via Pawnee, Harvel, Greenville, Hillsboro, Carlyle, Nashville, Pinckneyville, Murphysboro and Jonesboro. J. B. Campbell, pres. A. E. Taylor, secy.

Wisconsin—Milwaukee Connecting Ry, subsidiary of Chicago & Northwestern Ry., completed preliminary plans for connecting link between Madison and Sparta lines, east of West Allis, 8 mi. About $1,200,000. W. H. Finley, Jackson Blvd. and Franklin St., Chicago, ch. engr.

Iowa—Ft. Dodge, Des Moines & Southern R.R. plans to spend $250,000 for extensions and improvements. C. H Crooks, Boone, genl. mgr.

Nebraska—Union Pacific R.R. will extend Platte Valley line, running from North Platte to Gering, to point 30 mi. beyond western terminus, through the Goshen Hole country in eastern Wyoming. R. L. Huntley, 15th and Dodge Sts., Omaha, ch. engr.

Missouri—Atchison, Topeka & Santa Fe Ry. plans line from Mexico, Mo., to St. Louis, and from Mexico to Corrollton. Work will be started as soon as right-of-way has been secured. R. A. Rutledge, Topeka, Kan., ch. engr. Eastern Lines.

Arizona—W. A Clark, Miner Bldg., Butte, Mont., is reported interested in railway to be built from Swansea, via Kingman, to St. Thomas, Nev., on San Pedro, Los Angeles & Salt Lake R R.

Arizona—Prescott & Phœnix Short Line R.R. having final surveys made for 70-mi. standard gage railroad from Turkey to Glendale. R. E. Sloane, 406 Fleming Bldg., Phœnix, secy. and treas.

Mexico—See "Miscellaneous."

PRICES AND CONTRACTS AWARDED

(★Indicates award of contract)

★**Mississippi**—Illinois Central R.R. let contract grading about 23 mi. second track at 2 points on Yazoo & Mississippi Valley R.R., from Marietta to Prichard, about 12 mi., and from Gwin (Tchula P. O.), to Cruger, about 11 mi., also bridges, to Philbrick & Baxter, Jackson. Estimate, $500,000.

★**Tennessee**—Southern Ry. let contract double tracking line from Helenwood to Robbins, 6.4 mi., to Sheehan Constr. Corp., Roanoke, Va.

★**Washington**—Methow Valley & Eastern Ry. let contract 45-mi. railway from Pateros to Winthrop to Erickson Bros., Krupp.

EXCAVATION AND DREDGING

Proposed Work

Ga., Homer—Drainage—Comrs. Grove River D. D. No. 2, Banks Co., will issue $28,000 bonds to improve Grove River and other tributaries in district. J. W. S. Lord, chn.

La., Slidell — Drainage — See "Streets and Roads."

Ky., Paducah—Canal—J. M. Lang, co. judge, completed plans Mayfield Creek Drainage Canal from Grahamville, McCracken Co., across McCracken, Graves, Ballard and Carlisle Cos., emptying into Mississippi River, about 40 mi.; 67 ft. wide and 15 ft. deep. About $300,000. McCracken Drainage Comn. in charge of construction. H. Beyer, pres.

Ia., Jefferson—(Official)—Drainage—Bd. Supervs. rejected bids Joint Drain No. 110 in Greene Co. and No. 221 in Webster Co. B. S. McCully, Jeffersin, co. aud. Noted May 17.

Ia., Westfield—Drainage—Westfield D. D. plans open ditch work About $20,000. C. Moriarty, 600 United Bank Bldg., Sioux City, engr.

Minn., Ada—(Official)—Ditches—County sold $235,000 bonds for Judicial Ditches Nos. 53 and 54. D. E. Fulton, co. aud. Noted May 10.

Minn., Redwood Falls—Ditch—Co. Comrs. plan Ditch No 38. L. P. Larson, co. aud.

Kan., Quenemo—Drainage—E. B. Murray, engr., 920 Walnut St., Kansas City, Mo., completed surveys Marais des Cynes River drainage project in Franklin and Osage Cos., including 2-mi. ditch for Quenemo D. D. Cost between $100,000 and $125,-000.

Colo., Ordway—Drainage—Natl. Sugar Co. preparing plans drainage system for extensive land holdings in county.

N. M., Las Vegas—Drainage—V. K. Jones, city engr., preparing plans drainage district. About $15,160.

Ore., Portland—Drainage—Peninsula D. D. organized to drain Oregon and Columbia Slough Dists., about 951 acres. C. C. Colt, 627 Knot St., interested.

Cal., Los Angeles—Irrigation—State Water Comn., Call Bldg., San Francisco, granted permission to Sespe Light & Power Co., Los Angeles, to divert 88 second-feet of water from Sespe River for hydro-electric power plant. Plans include loose-rock and concrete dam and 9-mi. main canal and flume generating 5000 hp. About $2,000,000.

Cal., Oroville—Irrigation—F. F. Ford, A. L. Andrews, N. B. Crane and associates plan to engage engineer to investigate feasibility of irrigation district in Butte Co. to irrigate 30,000 acres of land. Water will be obtained from Middle Fork of Feather River, or system of Feather River Land and Irrigation Co. will be taken over and extended.

Cal., Susanville—Irrigation—State Water Comn., Sacramento, received application from Horne Development Co., Auburn, for permission to divert 20 sec.-ft. of water from streams in Lassen Co. for irrigation. Plans include 2 earth storage dams. About $71,000.

Cal., Susanville—Irrigation—Baxter Creek Irrigation Dist. voted $310,000 bonds to construct irrigation system.

BIDS DESIRED

N. Y., Albany—(Official)—Canals—Until June 26 by W. W. Wotherspoon, state supt. pub. wks., Capitol, improving New York State canals, Contract No. 146, Erie Canal, Sect. 4, constructing movable dam to replace existing Dam No. 14, Herkimer; advertised in this issue.

Miss., De Kalb—See "Streets and Roads."

Miss., Greenville—(Official)—Drainage—Until June 11 by O. C. Kulicka, secy. co. bd. drainage comrs., clearing natural channels in Black Bayou and Granicus Bayou, about 6-mi. Noted May 17.

La., Opelousas—Drainage—Until June 18 by C. F. Boagni, pres., Bayou Mallet and Plaquemine D. D. for excavating 42.2-mi. ditch, bottom ranging 6- to 28-ft. containing about 518,000 cu.yd. dirt; completing system of ditch designed to provide gravity drainage for above district.

Ia., Algona—(Official)—Drainage—Until June 15 by W. Wendt, drainage clk. for D. D. No. 133; Kossuth Co. D. D. No. 150; Winebago-Kossuth Joint D. D. Nos. 68-136; Emmet-Kossuth Joint D. D. No. 5; Humbolt-Kossuth Sub 2 of Joint No. 2.

Ia., Charles City—(Official)—Ditch—Until June 8 by C. R. Jones, co. aud., laying, filling, and construction of headwalls and intakes for Drain No. 3, Sect. 1; former bids rejected.

Ia., Mason City—Drainage—Until June 5 by G. E. Frost, co. aud., for drainage work, Dist. No. 44, 44,550 ft. 6- to 28-in. tile; Dist. No. 52, 9355 ft. 6- to 15-in. tile; Dist. No. 54, 18,810 ft. 6- to 16-in. tile; Dist. No. 49, 26,350 ft. 7- to 28-in. tile; Dist. No. 41, 29,500 ft. 6- to 18-in. tile; also repair for Dist. No. 2, 3350 ft. 8- to 10-in. tile.

Minn., Ada—Ditch—Until June 5 by D. E. Fulton, co. aud., for Ditch No. 42, requiring 94,353 cu.yd. excavation.

Minn., Chaska—(Official)—Ditch—Until June 22 by J. B. Connolly, co. aud., dredging Ditch No. 6, about $12,922, fencing $1151. Noted May 3.

Minn., Crookston—Ditch Work—Until June 12 by H. J. Welte, co. aud., repairing County Ditches Nos. 51, 20 and 53, each requiring about 3000 cu.yd. excavation.

S. D., Sioux Falls—Spillway—See "Reinforced Concrete."

Mo., Bloomfield—Ditch—Until June 6 by A. C. Spiker, civil engr. of D. D. No. 30, for constructing ditch and clearing right-of-way.

Excavation and Dredging (Continued)

Me., **Bloomfield**—Ditch—Until June 13 by J. E. Dunn, civil engr. of D. D. No. 31, for constructing ditch and clearing right-of-way.

PRICES AND CONTRACTS AWARDED

(★Indicates award of contract)

★Ia., **Charles City**—(Official)—Ditch—County let contract Drain No. 3, Sect. 1, to C. L. Hanson, $14,000, open ditch work; Cement Products Co., Spencer, $49,000, furnishing tile. Noted May 17.

Minn., Duluth—Ditch—County received only bid for Ditch No. 8 from Constr. Co., 304 Alworth Bldg.; furnishing culverts from Minneapolis Steel and Machinery Co., 29th and Minnehaha Sts., Minneapolis. Noted May 3.

★**Neb., Schuyler**—(Official)—Drainage—County let contract drainage ditch to Elkhorn Constr. Co., Fremont, 12½c. per cu.yd. Noted May 10.

★**Mo., Charleston**—Drainage—County let contract open work in Big Lake D. D., requiring 1,050,000 cu.yd. excavation, to Sternberg Bros., Natl. Bank of Commerce Bldg., St. Louis.

★**Mo., St. Charles**—Ditch—County let contract clearing right-of-way, excavating ditch, etc., to Wilmes & Foundley, St. Charles.

INDUSTRIAL WORKS

Proposed Work

Mass., Boston—General Electric Co., 84 State St., having plans prepared by A. J. H. & W. C. Ely, archt., Essex Bldg., Newark, N. J., for 3-story, 80x340-ft. factory, Porter St.

Mass., Boston—L. Shapiro, 27 School St., having plans prepared by J. E. McLaughlin, archt., 18 Tremont St., for 1-story garage, to be leased to U. S. Government. About $50,000.

Mass., Cambridge—Fleischmann Co., 701 Washington St., New York City, having plans prepared by C. A. Jackson, archt., c/o owner, for 3-story, brick and steel plant, Inmann St.

Mass., Newford—Butler Mill Corp., Ruth Ave., plans 1-story, 140 x 650-ft. addition to be used as weave shed. About $136,000.

Mass., Watertown—Hood Rubber Co. soon receives bids 5-story, brick and concrete plant. About $300,000. W. J. Bitterlich, archt.

Mass., Worcester—Morgan Spring Co., West Boylston, plans 4-story, 66 x 201-ft., brick and rein.-con. japanning department.

N. Y., Albany—Albany & Southern R.R. having plans prepared by J. G. White Engr. Corp., 43 Exchange Pl., New York City, for hydro-electric plant in Catskill Mountains. About $3,000,000. J. E. Hewes, genl. mgr.

N. Y., Buffalo—Donner-Union Coke Corp., recently incorporated, plans byproduct coke oven on 50-acre site adjoining plant of Donner Steel Co., Inc., Abbot Rd. About $3,000,000. R. N. Donner, F. B. Baird, H. Yates and F. C. Slee, dirs.

N. Y., Victory Mills—Saratoga Victory Mfg Co. having plans prepared by W. Higginson, archt., 13 Park Row, New York City, 4-story, 150x280-ft. factory.

N. J., Clifton—American Forging Co., recently incorporated with $100,000 capital stock, purchased site on Erie R.R., and plans plant. J. H. Waters, pres., J. Travers, secy.

Pa., Phila.—American Insulation Co., 67 North 2nd St., soon lets contract 2-story, 83x130-ft. brick, stone and concrete factory, Stokley and Roberts Sts. Peuckert & Wunder, archts., 310 Chestnut St.

Pa., Phila.—Berko Bros., Randolph and Wood Sts., plan 2-story, 140 x 200-ft. factory at York and Erie Sts.

Pa., Phila.—Edgewater Finishing Co., Frankford and Nicetown Sts., plans 4-story, 102 x 157-ft. factory at 4080 Frankford Ave.

Pa., Phila.—India Refining Co., Swanson and McKean Sts., plans rebuilding factory, 3-story. About $100,000. W. D Furber, archt. and engr., 420 Walnut St., soon receives bids. Noted May 3.

Pa., Phila.—Very Best Garage Co. soon lets contract 4-story, 77 x 115-ft. brick and rein.-con. garage, 7th and Spring Garden Sts. F. V. Greenstien, archt.

Pa., Pittsburgh—J. L. Stewart plans 9-story rein.-con. warehouse at 123-25 Penn Ave. About $115,000.

N. C., Wilmington—See "Reinforced Concrete."

Miss., Canton—Stillwater-Crosby Lumber Co., increased its capital stock from $200,000 to $350,000, and will extend plant.

O., Cincinnati—Citizens Motor Car Co., 7th and Main Sts., purchased site in Dayton Dist. and plans 2-story, 71 x 166-ft. garage and shop.

O., Cincinnati—Davenport Paper Box Co., 239-241 Main St., had plans prepared by G. W. Drach, archt., Union Trust Bldg., 4-story, 100x156-ft. factory, Pearl and Pike Sts. About $100,000. F. Davenport, pres.

O., Cincinnati—H. H. Meyer Packing Co., Central Ave. and Lynn St., had plans prepared by M. Fisher, archt., 2156 Central Ave., remodeling 3-story packing plant.

O., Cincinnati—Sheriff Preserve Co., 123 East Pearl St., purchased site at 8th and McLean Sts. and plans 5-story cold-storage plant.

O., Cincinnati—G. H. Strietmann, 225 W. 12th St., plans 2-story, 50x150-ft. garage and warehouse. Stegner & Hughes, archts., Commercial Tribune Bldg., soon receives bids. Noted Apr. 5.

O., Cleveland—Columbia Axle Co., 826 East 72nd St., having plans prepared by W. S. Ferguson Co., archt., 1900 Euclid Ave., for 1- and 2-story, 300 x 500-ft. factory. About $250,000. W. R. Hopkins, pres.

O., Cleveaind—Grant Motor Car Co., Coit Rd., plans factory and boiler house at Coit Rd. and Kirby Ave. About $600,000. W. S. Ferguson Co., archts. and engrs., 1900 Euclid Bldg., soon receives bids.

O., Cleveland—Otis Elevator Co., 528 Leader-News Bldg., plans 2-story, 60 x 100-ft. building, 1375 East 6th St. About $70,000.

O., Cleveland—K. V. Painter plans garage and factory, 1975 East 66th St. About $80,000.

O., Cleveland—Supreme Motors Corp. purchased site, Bliss Rd. and St. Clair St., and plans factory to manufacture automobiles and aëroplanes. About $50,000. C. F. Jamison, pres.

Ind., Gary—Cudahy Chemical Co. plans additions. About $500,000.

Mich., Detroit—Briggs Mfg. Co., Leuschner Ave., and G. T. R. R., increased its capital stock from $50,000 to $750,000, and will enlarge plant.

Ill., Chicago—Central Mfg. Co., 1st Natl. Bank Bldg., plans power station, 2015 West 39th St. About $250,000. S. Scott Joy, archt.

Ill., Chicago—B. Heller & Co., 3925 Calumet Ave., plans 3-story factory, Prairie Ave., near 38th St. About $60,000. J. C. Llewellyn, 38 South Dearborn St., archt.

Ill., Chicago—Peacock Estate, c/o E. N. Brydges, archt., 64 E Van Buren St., soon receives bids 3-story, 100x110-ft. factory, Stewart Ave., between 35th and 36th Sts.

Ill., Chicago—Turner Mfg. Co., 1444 South Sangamon St., plans 3-story manufacturing plant, Ogden Ave. and 42nd St. A. S. Alschuler, archt., 28 E Jackson Blvd., soon receives bids.

Ill., Chicago—United States Can Co., 2510 Highland Ave., Norwood, having plans prepared by S. N. Crowen, archt., 30 North La Salle St., for 1st unit of its plant, 1-story. About $300,000.

Ill., Decatur—Comet Automobile Co., Orlando Bldg., had plans prepared for 2-story, 50x80-ft. assembling plant. About $135,000. G. W. Jagers, pres. and genl. mgr.

Ill., East St. Louis—Golden Grain Milling Co., 17th St. and Brady Ave., soon receives bids milling plant. About $250,000. E. L. Solfisburg, treas. and genl. mgr.

Ill., Rockford—Keig & Stevens had plans prepared by C. D. Dooley Co., archts., and P. H. Anthony, assoc., archt., 1109 Waldheim Bldg., Kansas City, Mo., for 2-story bakery. About $50,000.

Wis., Clintonville—Wisconsin Duplex Auto Co., recently incorporated with $500,000 capital stock, plans plant to manufacture 1-ton trucks. B. A. Mosling, genl. mgr.

Wis., Milwaukee—Valley Steel Co., recently organized by Milwaukee capitalists affiliated with financial interests in the East, plans steel mill here. About $1,000,000.

Wis., Racine—Belle City Mfg. Co. had plans prepared for 4-story, 80 x 200-ft. addition to warehouse.

Minn., Duluth—Robert Barnes Steamship Co. plans plant. About $100,000. A. McDougall, Jr., and A. Barnes, interested.

Minn., Minneapolis—United Chemical Industry Co., 636 McKnight Bldg., preparing plans factory. About $50,000. O. L. Bird, secy.

Mo., Joplin—City will hold election June 12 to vote on $225,000 bonds to build light plant. H. Phillips, city clk.

Tex., Beaumont—See "Reinforced Concrete."

Tex., Ft. Worth—Riverside Cotton Oil Co. increased its capital stock from $75,000 to $250,000, and will enlarge its power plant.

Tex., Houston—Texas Chemical Co., incorporated with $100,000 capital stock, plans fertilizer manufacturing plant. F. H. Ward and E. W. Townes, Houston, incorporators.

Wash., Seattle—Metropolitan Bldg. Co., Henry Bldg., retained Howells & Stokes, Henry Bldg., to prepare plans 4- or 7-story garage and machine shop, University Tract, 5th Ave. to serve tenants of White, Henry and Stuart Bldg. About $150,000.

Cal., Alturas—See "Reinforced Concrete."

Cal., Bakersfield—See "Reinforced Concrete."

Dock Wall—Troy, N. Y.—(Official)—Harbor & Dock Comn., City Hall, received low bid from Great Lakes Dredge & Dock Co., 27 Lumber Dist., Albany, $380,828. Noted May 17.

★**Coaling Tower—Chicago, Ill.**—Swift & Co., Union Stock Yards, let contract, Exchange and Justine Sts., to W. G. Nelson, 35 South Dearborn St., $17,000.

★**Fill—Chicago, Ill.**—(Official) — Pittsburgh, Cincinnati, Chicago & St. Louis Ry. let contract about 600,000 cu.yds. sand filling in connection with elevation of tracks between 49th and 75th Sts., to P. T. Clifford & Son, Valparaiso, Ind.

Retaining Wall—St. Paul, Minn.—See "Streets and Roads."

★**Tunnel—Jerome, Ariz.**—United Verde Extension Mining Co. let contract drainage and haulage tunnel to Potter Constr. Co., $500,000.

★**Fill—Tacoma, Wash.**—Co. Comrs. let contract making fill on 11th St. to Tacoma Dredging Co., Tacoma, $81,225.

★**Wharf, etc.—Oakland, Cal.**—Howard Co. let contract wharf and warehouse to Tibbits-Pacific Co., 16 California St., San Francisco, $65,000.

★**Concrete Lining—San Raefael, Cal.**—See "Reinforced Concrete."

Railway Extension in Mexico on a large scale is projected by the Department of Communications and Public Works. The line on the Isthmus of Tehuantepec will be extended from Santa Lucretia to Merida, Yucatan. This project forms the connecting link in the line from Ciudad Juarez, on the American border, to Merida. Yucatan will finance the new line in conjunction with various electric lines connecting with it. The right-of-way formerly was controlled by a concession to foreign capital, but the concession was declared forfeited, as the holders failed to complete the work according to its terms. Another projected line will connect the Atlantic and Pacific coasts, traversing the country from Tampico to San Blas. The Southern Pacific company has been notified that it must continue its line from Compostela to Guadalajara. At Bahia Espiritus, Quintana Roo, a deep-water harbor is to be made at a cost of $5,000,000 gold. A railway outlet will be provided by a 100-mi. extension of the United Railroads of Yucatan.

The Army Mobilization Camps to be equipped by the U. S. Government will include the following: Each camp will consist of 2000 1- and 2-story frame buildings, water and sewage systems, roads and walks, lighting systems and plants, refrigerating plants, sterilizing plants, construction of temporary buildings required for shelter of troops, animals and supplies, $40,500; temporary hospitals, $2,125,000; water and sewer systems, $2,500,000; electric lighting system, $605,000; roads, drainage and clearing, $5,040,000; construction and repairs of target ranges, $2,015,000; disposal of garbage, $3,250,000; ice boxes for preservation of food, $270,000; 98,700 water closet outfits, 15,000 lavatory outfits, 70,000 shower outfits, 28,000 urinal outfits, 6,000,000 ft. wrought iron pipe, 15,000 sinks, 400,000 lbs. fittings, 1,321,000 ft. c.-i. soil pipe, 3,346,000 lbs. fittings, 18,660 galvanized urinal troughs, 613,000 sacks cement, 65,000 cu.yd. sand, 112,000 cu.yd. crushed stone or gravel, 55,000 lb. white lead, 211,000 lb. oakum, 7,000,000 lbs. nails, 230,892 doors, 232,892 locks, 30,240 ft. square wire screen, 729,000 ft. galvanized iron pipe, 210,000 ells, 209,000 hooks, 69,000 iron shower heads, 69,000 brass stop compression cocks, 3,200,000 vitrified sewer pipe, 652,000 6-light window glass, 1000 door hangers, 91,000 chimney flues, 468 combination motor driven engines, 926 hose reels, 468,000 ft. linen fire hose, 38,000 fire extinguishers, 76,000 fire axes, 153,000 fire buckets, 91,000 chimney caps, electric lighting material and supplies, 2,211,000 ft. copper wire, 100,000 lamps, Mazda, 85,000 each lamp sockets, rosettes, tin shades, 4500 gross cots, bedding, etc., 1,200,000 rolls roofing paper, 108 ft. each, 500,000,000 ft. lumber, water tanks. Thus far the following sites for the camps have been selected: Ayer, Mass., El Paso, Tex., American Lake, Wash., Augusta, Ga., Columbia, S. C., Chickamauga Park, Ga., Greenville, S. C., Ft. Sam Houston, Tex., Atlanta, Ga., 1st camp, Atlanta, Ga., 2nd camp, Manorville, L. I., Wrightstown, N. J.

Charles A. Schieren Co., New York, have opened branch offices at 72 Congress St., W., Detroit, Mich.; 18 South Bway., St. Louis, Mo.; 475 South Main St., Memphis, Tenn.; 272 Marietta St., Atlanta, Ga.

Cement Products Exhibition Co., 210 South La Salle St., Chicago, Ill., have elected the following officers for the ensuing year: B. F. Affleck, Pres., William Dickinson, Vice Pres., Blaine S. Smith, Secy., E. L. Cox, Treas.

IDAHO VOTES MILLION FOR ROADS

Governor Alexander of Idaho has signed the road bill of that state, and almost a million dollars is to be expended in the next two years on the road from Moscow through Lewiston, to Weiser and southern Idaho, a connection with the transcontinental highway to Portland and Seattle. Under the Post Roads bill the United States Government will appropriate $150,000 for the road, the state will provide $375,000, and the balance will be furnished by the counties. For the highway from Montana to Lewiston, which will connect with the automobile highway to Portland and Puget Sound, Idaho has appropriated $30,000, the Forestry Department $30,000, and the counties $30,000.

ROAD BIDS REJECTED ON ACCOUNT OF EXCESSIVE PRICES

Upon the recommendation of Chief Engineer Uhler, Frank B. Black, state highway commissioner, rejected all bids received by the Pennsylvania State Highway Department, May 3, for the construction of improved roads in Allegheny, Cambria, Dauphin and Washington Counties. The prices bid were excessively high, even in view of the present scarcity of labor and increased cost of materials. Commissioner Black announced that all of these sections of road would be readvertised immediately, as well as the section of road in Clarion County for which no bids were received on May 3. It is the intention of the Highway Department to rush road construction throughout the state as appropriations become available, especially on the main-traveled routes.

Asbestos Protected Metal Co., First National Bank Bldg., Pittsburgh, Pa., has closed its Atlanta and St. Louis offices temporarily due to the fact of the managers entering the Officers' Reserve Corps. All communications should be addressed to the home office.

Gaston, Williams & Wigmore have moved their offices to Equitable Bldg., 120 Bway., New York City.

Wagner Electric Mfg. Co., St. Louis, Mo., has appointed E. T. Coup to take charge of its office in the First National Bank Bldg., Milwaukee, Wis.

Weiss Instrument Co. have moved their offices to 1731 Arapahoe St., Denver, Colo.

M. F. Williams, 925 Sheridan Ave., Detroit, Mich., has been appointed district representative for the distribution of the electromobile industrial trucks and tractors manufactured by Orenstein-Arthur Koppel Co., Koppel, Pa.

PROPOSALS

Bids received until June 26, 1917.

Barge Canal Work

STATE OF NEW YORK, OFFICE OF SUPERINTENDENT OF PUBLIC WORKS

Albany, N. Y., May 22nd, 1917.

Sealed proposals will be received by the undersigned at his office in the Capitol at Albany, N. Y., until twelve o'clock noon of Tuesday, June 26th, 1917, at which place and hour they will be publicly opened and read, for improving the New York State canals pursuant to the provisions of Chapter 147 of the Laws of 1903, and of the acts amendatory thereof and supplementary thereto, and Chapter 570 of the Laws of 1915, as follows:

CONTRACT NO. 146.

Erie Canal—Section 4.

For constructing a new movable dam to replace existing Dam No. 14 at Herkimer. Sheets 1 to 7, inclusive.

Plans may be seen and detailed specifications, engineer's estimate of quantities, proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y., at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y., at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office, Spaulding's Exchange, Buffalo, N. Y.

Copies of detailed plans or drawings may be obtained from the State Engineer and Surveyor at Albany, N. Y., upon payment to him of the cost of producing them.

Monthly estimates will be paid of ninety per centum (90 per cent.) of the work done at the contract price. Every proposal for said work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in th eCity of Albany or New York, issued by a national or State bank in good credit within the State and payable at sight to the Superintendent of Public Works for five per centum (5 per cent.) of the amount of the proposal.

The person whose proposal shall be accepted will be required to execute a contract and furnish bonds within ten days from the date of notice of award delivered to him or them in person or mailed to the address given in the proposal.

Upon execution of the contract and approval of bonds, the certified check or draft will be returned to the proposer unless the same shall have been presented for collection prior to such time, in which case the amount of the deposit will be refunded by the Superintendent of Public Works.

The deposits of bidders other than the one to whom the award of contract shall be made will be returned immediately after the award has been made.

The bond required for the faithful performance of the contract shall be in such sum as shall be fixed by the Superintendent of Public Works, which sum shall not be less than twenty per centum (20 per cent.) of the estimated cost of the work according to the contract price, and an additional bond, known as the labor bond, in the sum of ten per centum (10 per cent.) of the amount of the estimated cost of the work according to the contract price, will be required as security that the contractor will pay in full at least once in each month all laborers employed by him upon the work specified to be done in the contract.

In the event that more than one surety company is offered as surety on said bonds co-insurance only will be accepted.

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned, the interests of the State will be enhanced thereby.

W. W. WOTHERSPOON,
Superintendent of Public Works.

Official Proposals

Price, $3.60 an inch—Copy can be received until Wednesday, 10 a. m. for issue mailed the next day

PROPOSALS

Bids received until June 20, 1917.

Lateral Sewers

Scarsdale, N. Y.

Sealed proposals for the construction of lateral sewers and appurtenances in the Village of Scarsdale, New York, will be received until 8 P.M. on Wednesday, June 20th, and will then be publicly opened and read by the Street Commissioner of the Village of Scarsdale, at his office in the Town Hall of Scarsdale, who will report thereon to the Board of Trustees.

Plans and specifications may be seen and blank forms of proposals obtained at the office of Waring, Chapman & Farquhar, civil engineers, 874 Broadway, New York City.

A charge of $3.00 will be made for plans and specifications furnished to applicants therefor.

Each proposal must be made on one of the blank forms provided, and must be accompanied by a certified check for $1000.00.

The amount of bond for faithful performance, to be furnished when the contract is executed, will be the amount of the contract price as computed from the accepted bid.

The proposed work consists of approximately 11,000 lineal feet of 8-inch pipe sewer, with manholes, flush-tanks, etc., and is to be completed by December 1st, 1917.

The Board of Trustees reserves the right to reject any or all bids.

Scarsdale, N. Y., May 29th, 1917.

By order of the Board of Trustees,
JOHN R. ROSS, Village Clerk.

PROPOSALS

Bids received until June 26, 1917.

Bituminous Macadam Road

Belvidere, N. J.

Sealed bids or proposals will be received by the Board of Chosen Freeholders of the County of Warren, in the State of New Jersey, for the completion of 4.107 miles of Bituminous Macadam Road, known as the Washington-Buttzville Road, Section No. 1, according to the terms of the contract made with Raphael A. Capone on April 14, 1916, at their office at the Court House in Belvidere, New Jersey, on

WEDNESDAY, JUNE 20, 1917,
at 10.30 A. M.

Each bidder must accompany his bid with a certified check, payable to the County Collector of the County of Warren, for One Thousand Dollars, as a guarantee, according to law.

Said contract, with its attached plans and specifications, together with an estimate of the work already performed and material now upon the line of work, are on file for examination at the office of Harry W. Vetter, County Engineer of Warren County, in the Court House, Belvidere, New Jersey, where blank proposals may also be obtained.

The right is reserved to reject any or all bids.

By order of the Board of Chosen Freeholders of the County of Warren.

MORRIS S. FAUST, Clerk.

Bids received until June 21, 1917.

Paving

Lebanon, Pa.

Sealed proposals directed to Dan. M. Sharp, City Clerk, will be received by the Mayor and Council of the City of Lebanon, Pa., at the City Hall until 5 P. M., Thursday, June 21, 1917, for the furnishing of all labor and materials required to construct pavements as follows:

Seventh Street, approximately, 1100 square yards

Sixth Street, approximately, 2800 square yards

New Street, approximately, 1600 square yards

Fifth Street, south of Willow, approximately, 2600 square yards

Fifth Street, north of Willow, approximately, 3100 square yards

Alternate bids will be received on a 6-in. concrete pavement and on wood block, vitrified brick, bitulithic and topeka each on 5-in. concrete base.

Specifications, proposal blanks and information concerning the manner of submitting bids can be obtained from the City Engineer upon a deposit of Five Dollars ($5), which will be refunded upon the return of specifications in good condition.

Plans of streets and standard structures may be seen at the City Engineer's Office.

Certified checks of the different amounts called for on the several proposals must accompany each bid.

The Mayor and Council distinctly reserve the right to reject any or all bids and to award the contract as is deemed to the best interest of the City of Lebanon.

PAUL A. VOLCKER, City Engineer.

BUILDING OPERATIONS FOR MAY

Following is a list of contracts awarded by the F. W. Dodge Co. for:

New York, New England, New Jersey, Pennsylvania, Delaware, District of Columbia, Virginia, Ohio, West Virginia, Indiana, Iowa, Wisconsin, Michigan, Minnesota, North and South Dakota, and portions of Missouri and eastern Kansas:

Contracts awarded Jan. 1 to June 1:

1917	$624,861,000
1916	456,101,500
1915	321,241,100
1914	300,721,000
1913	379,001,500
1912	327,015,000
1911	339,167,813
1910	366,037,505

NEW YORK AND NORTHERN NEW JERSEY

Contracts awarded Jan. 1 to June 1:

1917	$127,894,000
1916	59,526,500
1915	59,493,500
1914	56,036,000
1913	134,307,500
1912	98,730,000
1911	100,787,000
1910	110,603,000

For the larger territory covered contracts awarded amount to $157,563,000 against $148,513,000 for April and $132,744,000 for March, which shows a steady increase in building construction. For the smaller territory of New York and Northern New Jersey contracts awarded for May amount to $32,419,000 against $26,823,000 for April and $26,424,000 for March or an increase of about $6,000,000.

In the sub-division of this larger territory we find that in the New England states from January to June, 1916, there were about $82,144,000 worth of contracts awarded against $79,200,000 in 1917, or a loss during this year of over $3,000,000. In the territory around Philadelphia, Baltimore and Washington the contracts awarded this year amount to $76,000,000 against $68,000,000 last year. Around Pittsburgh they amount to $80,000,000 against $58,000,000,000 last year and in the Central West the 1917 contracts amount to $244,000,000 against $155,000,000, showing that the biggest increase is in that section. Throughout the Northwest 1917 shows contracts awarded amounting to $17,000,000 against contracts of 1916 of $31,000,000, or a loss of $14,000,000 during this year. Summed up, these figures show that the Central West and New York and New Jersey show the largest increase, with small gains in the Eastern Atlantic states and a large loss throughout the Northwest.

The "New Way" Motor Co., Lansing, Mich., have added to the list of service stations the following: Hubbard & Floyd, New York City, C. T. Burchfield, Philadelphia, and French & Allan, Chicago. These concerns will be more than pleased to see any "New Way" owners and operators and assist them in every way possible.

Refrigerating Equipment—Thiells, N. Y.—(Official)—Until July 12 by Bd. Managers, Letchworth Village, 7 Wall St., New York City; advertised in this issue.

Cast Iron Lamp Stands—Bayonne, N. J.—(Official)—Until June 26 by W. G. Muirheid, secy. Hudson County Park Comn., 1 Exchange Pl., Jersey City, furnishing 60 c.i. lamp standards; advertised in this issue.

Retaining Wall—Clifton, Ariz.—Until July 2 by M. Danenhauer, town clk., concrete and slag, along river.

PRICES AND CONTRACTS AWARDED

Breakwater—Hull, Mass.—Comn. on Waterways and Pub. Lands, State House, Boston, received bids, June 14, building breakwater at Gun Rock Point, Hull, requiring 17,000 tons stone from Rockport Granite Co., 31 State St., Boston, $1.87; Bay State Dredging & Contr. Co., 247 Atlantic Ave., Boston, $1.93; T. Fitzgibbon, Beverley, $2.05.

Docks—Buffalo, N. Y.—(Official)—Comr. Pub. Wks., Room No. 3, Municipal Bldg., received low bids, improving along Bird Island Pier, from Great Lakes Dredge & Dock Co., Morgan Bldg., $268,900; H. S. Kerbaugh, Inc., Morgan Bldg., $275,000; Cleveland Engr. Constr. Co., 901 Swetland Bldg., Cleveland, $296,467. Noted June 7.

★Retaining Wall—Hoboken, N. J.—See "Industrial Works."

CANTONMENT BUILDINGS

Following is list of cantonment buildings which we understand have been awarded by the U. S. Government: Ayer, Mass.; F. T. Ley & Co., Main St., Springfield, Mass.; American, Lake, Wash., Hurley, Mason & Co., Perkins Bldg., Tacoma, Wash.; Wrightstown, N. J., Irwin & Leighton, 126 North 12th St., Phila., Pa.; Atlanta, Ga.; Arthur Tufts, 7 West Ellis St., Atlanta; Columbia, S. C., Hardaway Contr. Co., 143 11th St., Columbus, Ga.; Battle Creek, Mich., Porter Bros., Detroit, Mich.; Rockford, Ill., Bates & Rogers Contr. Co., 37 West Van Buren St., Chicago, Ill.; aviation field at Rantoul, Ill., English Bros., 55 North Walnut St., Champaign, Ill.

American Capital to Build Peruvian Railroad—A railway across Peru, which will cut through the Andes and strike into the fertile country at the headwaters of the Amazon River, is projected to be built by American capital, the financial arrangements having recently been completed by Senator Henrique C. Zegarra, of Lima, and J. W. Flannagan, of Houston, Tex. The Peruvian Government has granted concessions all along the route, which traverses a rich agricultural, timber and mining country. Work is to begin this summer. The railway will be about 400 mi. long, running from the Pacific port of Palta, eastward to a point on the Maranon River (Amazon), where it is navigable by seagoing vessels. This railway is intended to afford rapid and adequate transportation for the rubber of western Brazil. It is expected that the construction will occupy three years, but operation will commence on the railway just as soon as the first hundred miles is completed.

W. T. Clark has resigned as manager of the Traylor Eng. & Mfg. Co., Allentown, Pa., and has accepted the position of manager of the Moline Plow Wks., Moline, Ill.

A. F. Ehrbar has been appointed general manager of the Duplex Mfg. & Fdry. Co., Elyria, O.

★**Conn., Jewett City**—Hotel—Aspinook Co. let contract 3-story, 50 x 100-ft., brick, to Fiske-Carter Constr. Co., 11 Foster St., Worcester, Mass.

Conn., Waterbury—High School—City received low bids English High School, from Mill Engr. & Constr. Co., Waterbury, $539,916 and Oscawanna Bldg. Co., 101 Park Ave., New York City, $567,000.

★**Conn., Waterbury**—High School—Bd. Educ. let contract English High School to Mill Engr. & Constr. Co., Waterbury, $539,916. Noted June 28.

★**N. Y., New York**—Theater—Putnam Theatrical Co. let contract, Fulton, Livingston, Smith Sts. and Gallitin Pl., to Fleischman Constr. Co., 7 West 45th St. About $500,000.

N. J., Harrison—School—Bd. Educ. received low bid addition to School No. 1 from McEvoy Bros., 33 6th St. Noted May 17.

★**N. J., Hoboken**—School—Bd. Educ. let contract P. S. No. 3 to M. T. Connoly Contr. Co., 238 17th St., $200,000. Noted June 7.

★**Pa., Athens**—High School—Bd. Educ. let contract to W. B. Richards, 24 Gates St., Wilkes-Barre. About $50,000.

★**Pa., Newcastle**—Lodge—Lodge No. 51, L. O. M. let contract to W. Chambers, $57,000.

★**Pa., Phila.**—Hospital—City let contract to Marx Constr. Co., Birmingham, Ala. About $2,000,000 available. Noted June 14.

★**Md., Baltimore**—School—Bd. Educ. let contract Linwood and Eastern Aves., to J. L. Robinson Constr. Co., 66 Knickerbocker Bldg., $117,000. Noted May 31.

★**O., Massillon**—Bank—Union Natl. Bank let contract, steel and brick, to J. L. Stuart, Illuminating Bldg., Cleveland. Noted May 17.

★**O., Youngstown**—Bank — Commercial Bank let contract addition to C. H. Medicus, 239 Lora Ave., $100,000. Noted Apr. 19.

★**O., Youngstown**—Museum—J. G. Butler, Jr., let contract, 50 x 124-ft. Georgian marble, Wick Ave., to J. H. Parker & Co., 315 4th Ave., New York City. About $250,000.

★**O., Youngstown**—See "Structural Steel."

★**Wis., Laona**—Schoolhouse—Bd. Educ. let contract to Krasin Bros., $50,000.

★**Wis., Madison**—Y. W. C. A. let contract building to Wisconsin Constr. Co., University Ave. and Charter St., $100,000.

★**Ia., Ottumwa**—High School—Bd. Educ. let contract to B. S. Staley Co., Ottumwa. About $144,719.

Minn., Aurora—High School—Independent School Dist. received low bid from Bailey-Marsh Co. About $300,000. Noted May 24.

★**Neb., York**—Schools—Bd. Educ. let contract 3 ward schools to Hansen & Nelson, Lincoln, $106,000.

★**N. D., Drake**—High School—Bd. Educ. let contract to R. B. Marschke, Lucca, $68,655.

★**N. D., Lakota**—Hotel—Lacota Hotel Co. let contract to D. A. Dinnie, Minot, $50,000. Noted May 24.

Mo., St. Louis—School—Bd. Educ. received low bid Penrose School, Clayton and Central Aves., from E. C. Gerhardt Constr. Co., $179,400.

★**Tex., Waco**—Store—Williams Dry Goods Co., let contract, Mary and 6th Sts., to J. E. Johnson, $90,000.

★**Okla., Norman**—Auditorium—State Bd. Pub. Affairs let contract to Holmboe Constr. Co., 311-315 Majestic Bldg., Oklahoma, $140,000.

★**Nev., La Vegas**—High School—See "Reinforced Concrete."

★**Wash., Pine City**—Lodge—Odd Fellows Lodge let contract, 8-story, 30 x 60-ft., to E. E. Erickson, Cheney.

Wash., Seattle—School—School Bd. received low bid Fauntleroy Grade School from Pohl Constr. Co., 3406 37th Ave., S. About $50,000.

★**Ore., Corvallis**—Library—Oregon Agricultural College let contract to Snook & Travers, Salem, $83,700.

★**Ore., Eugene**—Dormitory—Bd. Regents, University of Oregon, let contract to Van Patton & Son, Salem, $50,000. Noted June 7.

★**Cal., Sacramento**—School—Bd. Educ. let contract Washington School to H. S. Williams, Hearst Bldg., $196,816.

★**Ont., Hamilton** — School — Bd. Educ. let contract brick and steel to W. H. Hooper, Clyde Bldg., $70,000.

★**Ont., London**—Office—Utilities Bd. let contract to R. G. Wilson, 195 College St. and J. Purchbough, 1006 Wellington St., $100,000.

FEDERAL GOVERNMENT WORK

Proposed Work

O., Akron—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., rejected bids opened June 18. Noted June 21.

Minn., Montevideo—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., rejected bids opened June 19. Noted May 17.

Tex., Denton—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., rejected bids opened June 8. Noted June 21.

Tex., Orange—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., rejected bids opened June 6. Noted June 14.

BIDS DESIRED

N. Y., Tompkinsville—Coal—Until June 30 by Lighthouse Inspector for 350 tons pea coal and 250 tons stove coal; advertised in this issue.

Pa., Dubois—Post Office—Until Aug. 9 by J. A. Wetmore, superv. archt., treas. dept., Wash., advertised in this issue.

Md., Annapolis—Building—Until July 9 by Bureau of Yards and Docks (F. R. Harris, ch.), Navy Dept., Wash., for addition to Bancroft Hall, U. S. Naval Academy.

Wash., D. C.—Canal Wall—Until July 2 by Dist. Comrs., Room 509 Dist. Bldg.

Wash., D. C.—Cement—Until July 10 by U. S. Engr. Office, Room 305, Southern Bldg., for furnishing and delivery at foot 35th St., here, 15,000 bbl. more or less of portland cement; advertised in this issue.

Wash., D. C.—Dredge—Until Aug. 20 for purchase of 1 pipe line suction dredge offered for sale by Panama Canal; advertised in this issue.

W. Va., Charleston — Buildings — Until July 16 by Bureau Yards and Docks (F. R. Harris, ch.), Navy Dept., Wash., for 4 buildings.

Federal Government Work (Continued)

Tenn., Gallatin—Post Office—Until July 26 by J. A. Wetmore, superv. archt., treas. dept., Wash. Formerly published as an error to be received until June 26. Advertised in June 21 issue.

O., Cincinnati—Cement—Until July 23 by U. S. Engr. Office, 1st Dist., furnishing and delivering about 7200 bbls. American portland cement for dam No. 39, Ohio River.

Ia., Glenwood—Post Office—Until July 9 by J. A. Wetmore, superv. archt., treas. dept., Wash.

Tex., Vernon—Post Office—Until July 27 by J. A. Wetmore, superv. archt., treas. dept., Wash.

PRICES AND CONTRACTS AWARDED

(★Indicates award of contract)

★**N. Y., Buffalo**—Steel Towers — Lighthouse Inspector, Buffalo, let contract furnishing metal work for 2 steel towers for Manhattan Range Lights, O., to Great Lakes Dredge & Dock Co., Morgan Bldg., Buffalo, $8350.

★**N. Y., Yaphank**—Cantonment Buildings —N. D. Baker, secy. war, let contract to Thompson-Starrett Co., 49 Wall St., New York City.

N. J., Lake Denmark—(Wharton P. O.) —Storage Buildings—Bureau Yards and Docks, Navy Dept., Wash., received low bids from W. L. Goeltz Co., 50 Broad St., New York City, $107,200; United Fireproofing Co., 8 West 40th St., New York City, $116,170; C. D. Pruden & Co., Bayard and Warner Sts., Baltimore, $123,683. Noted Apr. 26.

★**Md., Annapolis Junction**—Cantonment Buildings—N. D. Baker, secy. war, let contract to Smith, Hauser & MacIssac, 18 East 41st St., New York City.

Wash., D. C.—Bridges—Comr. of Indian Affairs, Wash., received bids, June 20, steel highways bridges on Umatilla Indian Reservation, from Monarch Engr. Co., 312 17th St., Denver; Omaha Structural Steel Co., 420 Bee Bldg., Omaha; Zeich & Walton, 552 Gillilan Bldg., St. Paul; Midland Bridge Co., 504 Midland Bldg., Kansas City, Mo.

Wash., D. C.—Coast Guard Station—Navy Dept., U. S. Coast Guard, Wash., received low bids Coast Guard Station No. 184, Creeds Hill, N. C., from Evans & Meekins, Manteo, N. C., $18,200, and J. W. Martin, Elizabeth City, N. C., $17,567. Noted May 24.

★**Wash., D. C.**—Radio Buildings—Bureau Yards and Docks, Navy Dept., let contracts masts and towers at various radio stations as follows: C. L. Dooley, 257 Adelphia St., Brooklyn, for Portland, Me., $4800, Portsmouth, N. H., $4950; F. A. Day's Sons, 24 Pearl St., Provincetown, Mass., for North Truro, Mass., $4490; T. M. McCarrel, Charlestown, S. C., for Charlestown, Mass., $3898; W. T. Hadlow, Baldwin Bldg., Jacksonville, Fla., for St. Augustine and Jupiter, Fla., $3898 and $9281 respectively. Noted June 21.

Wash., D. C.—Sewers—Dist. Comrs., Room 509 Dist. Bldg., received only bid June 21, outlet trunk sewer on 4th St., S. E., from Warren F. Brenizer, Wash., 9000 lin.ft. piling driven in place and cut off, 40c. per lin.ft.; 17,000 ft. b.m. of lumber, $75 per M ft.; 750 cu.yd. ordinary excavation, $2.25; 400 cu.yd. concrete masonry "E" in place, $12.50; 35 cu.yd. vitr. brick masonry, $29; 4 cu.yd. sewer brick masonry, $16.

N. C., Chapel Hill—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., received only bid from W. J. Brent Constr. Co., Bd. Trade Bldg., Norfolk, Va., $48,333. Noted June 7.

N. C., Wash Woods—Coast Guard—Navy Dept., U. S. Coast Guard Headquarters received low bid Coast Guard Station No. 166 from Evans & Meekins, Manteo, $19,000. Noted June 7.

Fla., Pensacola—Bulkhead, etc.—Bureau Yards and Docks, Navy Dept., Wash., received low bids bulkhead piers, culverts, fill and pavement at Navy Aeronautic Station from H. Monk, Pensacola, $94,000; F. G Proudfoot, Tampa, $77,610.

★**Fla., Pensacola**—Tower—Bureau Yards and Docks, Navy Dept., Wash., let contract to C. H. Turner Co., Pensacola, $25,260. Noted June 21.

★**Ky., Louisville**—Cantonment Buildings —N. D. Baker, secy. war, let contract to Mason & Hanger, Richmond.

★**O., Chillicothe**—Cantonment Buildings —N. D. Baker, secy. war, let contract to A. Bentley & Co., Toledo.

Ill., Aledo—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., received low bids (a) limestone, (b) sandstone, from G. W. Stiles Constr. Co., Rookery Bldg., Chicago, (a) $43,414, (b) $43,714; Michie Constr. Co., 82 Wisconsin St., Milwaukee, (a) $43,100, (b) $43,600; Northern Constr. Co., 421 Milwaukee St., Milwaukee, (a) $42,675, (b) $43,200. Noted May 17.

★**Ia., Des Moines**—Cantonment Buildings —N. D. Baker, secy. war, let contract to C. Weitz Sons, 713 Mulberry St.

Minn., Montevideo — Post Office — **J. A.** Wetmore, superv. archt., treas. dept., Wash., received lows bids, (a) limestone, (b) sandstone, from J. Lauritzen, Fergus Falls, (a) $46,839; J. Hellerick, Montevideo, (a) $47,212, (b) $47,737; J. H. Alson & Co., Willmar, (a) $48,300. Noted May 17.

Kan., Cherryvale—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., received low bids from C. Weitz Sons, 713 Mulberry St., Des Moines, Ia., $38,300; G. W. Stiles Constr. Co., Rookery Bldg., Chicago, $43,000; G. A. Shaul, Seneca, Kan., $48,790. Noted May 17.

★**Kan., Ft. Riley**—Cantonments Building —N. D. Baker, secy. war, let contract to G. A. Fuller Co., 175 5th Ave., New York City.

Wyo., Ft. Laramie—Canal—U. S. Rec. Ser., Ft. Laramie, received low bid excavating main canal on Ft. Laramie Unit, North Platte Project. Nebraska-Wyoming, from J. E. Hilton, Billings, Mont. Noted May 17.

Mo., Butler—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., received low bids, June 22, from C. Weitz Sons, 713 Mulberry St., Des Moines, $42,460; Johnson Constr. Co., Argo, N. C., (Lillington P. O.); G. A. Shaul, Seneca, Kan. Noted June 7.

★**Mo., St. Louis**—Aviation Station—Newton D. Baker, secy. war, let contract to United Constr. Co., Title Guaranty Bldg., St. Louis, at cost plus percentage, $500,000.

Ark., Fordyce—Post Office—J. A. Wetmore, superv. archt., treas. dept., Wash., received low bids, June 22, (a) limestone, (b) sandstone, as follows: W. O'Neil & Sons Co., Faribault, Minn., (a) $31,979, (b) $32,929; King Lumber Co., Charlottsville, Va., (a) $42,000, (b) $44,000; A. Blair, Montgomery, Ala., (a) $42,850, (b) $43,400. Noted May 24.

★**Ark., Little Rock**—Cantonment Buildings—N. D. Baker, secy. war, let contract to J. Stewart & Co., 30 Church St., New York City.

★**Tex., Ft. Sam Houston**—Cantonment Buildings—N. D. Baker, secy. war, let contract to Stone & Webster Engr. Corp., 147 Milk St., Boston.

★**Wash., Tacoma**—Waterworks and Sewerage Systems—Hurley-Mason Co., general contractors for U. S. cantonment buildings at American Lake let contract waterworks and sewerage systems to Tacoma Dredging Co., Perkins Bldg., Tacoma. Project includes 15,000,000 gal. reservoir and about 20 mi. sewers and 20 mi. water pipe lines.

MISCELLANEOUS

Proposed Work

Garbage Disposal Plant—Tottenville, S. I., N. Y.—Metropolitan By-Products Co., 52 Vanderbilt Ave., New York City, plans, at Lake Island near Tottenville. About $18,000.

Dock—Phila., Pa. — Crew Levick Co., Land Title Bldg., will build 40 x 1200-ft. dock at proposed new oil works on Petty's Island.

Elimination of Grade Crossings—Reading, Pa.—Chamber of Commerce engaged H. H. Althouse, cons. engr., Woolworth Bldg., New York City, to prepare plans for elimination of grade crossings on 7th St. along Philadelphia & Reading Ry.

Retaining Walls—Fayetteville, W. Va.—See "Streets and Roads."

Wharves—New Orleans, La.—City appropriated $15,000 to improve wharf facilities here. W. G. Hardee, city engr.

Park Improvements—Toledo, O.—City receiving bids July 23 for sale of $150,000 bonds for park improvements. W. Steward, dir. finance. Noted June 7.

Subway—Cairo, Ill.—Cleveland, Cincinnati, Chicago & St. Louis Ry. will elevate its tracks upon and across Washington Ave. in northern section of city preparatory to building Sycamore St. subway. C. A. Paquette, Cincinnati, ch. engr.

Park Improvements — Okemah, Okla.—City voted $10,000 bonds to improve parks.

Culverts—Santa Ana, Cal.—See "Streets and Roads."

BIDS DESIRED

Elevated Railway—Brooklyn, N. Y.—Until July 5 by Pub. Ser. Comn., 120 Bway, New York City, for constructing Route 49, Sec. 3, Culver Rapid Transit R.R. from point near Ave. X to Sheepshead Bay Rd.

Dam—New Brunswick, N. J.—See "Reinforced Concrete."

Marble Wainscoating—Media, Pa.—(Official)—Until July 9 by O. L. Davis, co. controller, for marble wainscoating for main stairway and 2nd story front corridors of courthouse; advertised in this issue.

Coal—Ionia, Mich. — (Official) — Until July 5 by O. Fuller, warden Michigan Reformatory, 4000 tons bituminous coal; advertised in this issue.

Piling—San Antonio, Tex.—Until July 12 by F. Fries, city clk., furnishing 27,000 lin.ft. cypress piling, 12x12-in. x 27 ft., 121,000 lin.ft. cypress lumber 3x12-in. x 10-ft. and 5500 ft. trench and backfilling for retaining walls along San Antonio River.

Wharves—Kingston, Ont. — (Official)—Until July 16 by Dept. Pub. Wks. for reconstructing part of cribwork wharves at entrance to dry dock. R. C. Desroches, secy.

PRICES AND CONTRACTS AWARDED

(★Indicates award of contract)

★**Boardwalk—Newport Beach, Cal.**—City let contract to G. Helms, Newport Beach, $14,091. Noted May 17.

★**Dam—San Rafael, Cal.**—Marin Municipal Water Dist. let contract Alpine Dam in Lagunitas Canyon to Leonard & Hansen, San Francisco, $211,626.

MATERIAL REQUIRED FOR CANTONMENTS

The Quartermaster's Department has finished its estimate of the amount of building materials required in each of the cantonments for the national army. The quantities may be more or less varied by construction needs which develop while the work is in progress and the difference in climate between the Northern and Southern part of the country has its effect on the quantities of some of the materials.

In the Southern states there will be about 5,600,000 board feet of boards, 7,800,000 board feet of dimension stuff, 177,000 ft. of 4 x 4 in. timbers 2,800,000 ft. of flooring, 1,200,000 ft. of siding and 1,400,000 ft. of matched boards. In the northern cantonments, where the amount of lumber will be increased about 216,000 board feet.

To construct one of these cantonments in the south it will be necessary to use over 2500 kegs of nails and in the northern cantonments about 2650 kegs. The buildings in a southern cantonment will require 4800 rolls of sheathing paper, 6300 squares of one-ply roofing, 21,900 squares of two-ply roofing, and about 2110 rolls of tarred felt. In the northern cantonments the amount of one-ply roofing will be reduced to about 800 squares while the amount of tarred felt will be increased to 3200 rolls.

The concrete work in a cantonment is estimated to require 4700 bbl. of portland cement, 1400 cu.yd. of sand and 2500 cu.yd. of broken stone of screened gravel.

In order to extinguish fires in these cantonments about 8300 fire extinguishers holding 2½ gal. each, will be placed around the buildings. There will also be at convenient places about 3000 water casks similar to those used in shipping oil. These will be painted red and have brackets from which 12-quart galvanized iron fire pails will be hung. The 16 cantonments will require nearly 120,000 of these fire pails. There will be water mains running through the camps fitted with hydrants and about 380,000 ft. of 2½-in. hose will be provided for connection with the hydrant nozzles.

The plumbing work for the 16 cantonments calls for about 1,600,000 ft. of ¾- to 2½-in. galvanized pipe, 20,000 nipples, 30,000 unions, 225,000 malleable fittings, 30,000 shower bath heads, 40,000 closets and tanks, 12,000 urinal troughs, 9000 lavatory troughs, 23,000 floor drains, 5000 roof flashings, 95,000 ft. of cast iron sewer pipe, 150,000 of soil pipe fittings, 822,000 lb. of calking lead, 91,000 lb. of oakum, 8000 terra cotta grease traps, 8000 cast iron sinks, and 6000 galvanized range boilers.

It is estimated that about 4000 cars will be required to transport these materials to each cantonment, and while they are being delivered many more cars will be required to furnish the supplies needed for the workmen, who will number between 3500 and 5000, according to the condition of the work and the size of the cantonment. Furthermore, in order that the recruits may be accommodated as soon as they arrive, large quantities of cantonment furniture will arrive before the construction is finished, for as the workmen move out their places will probably be taken at once by the new soldiers who are to be trained in these camps.

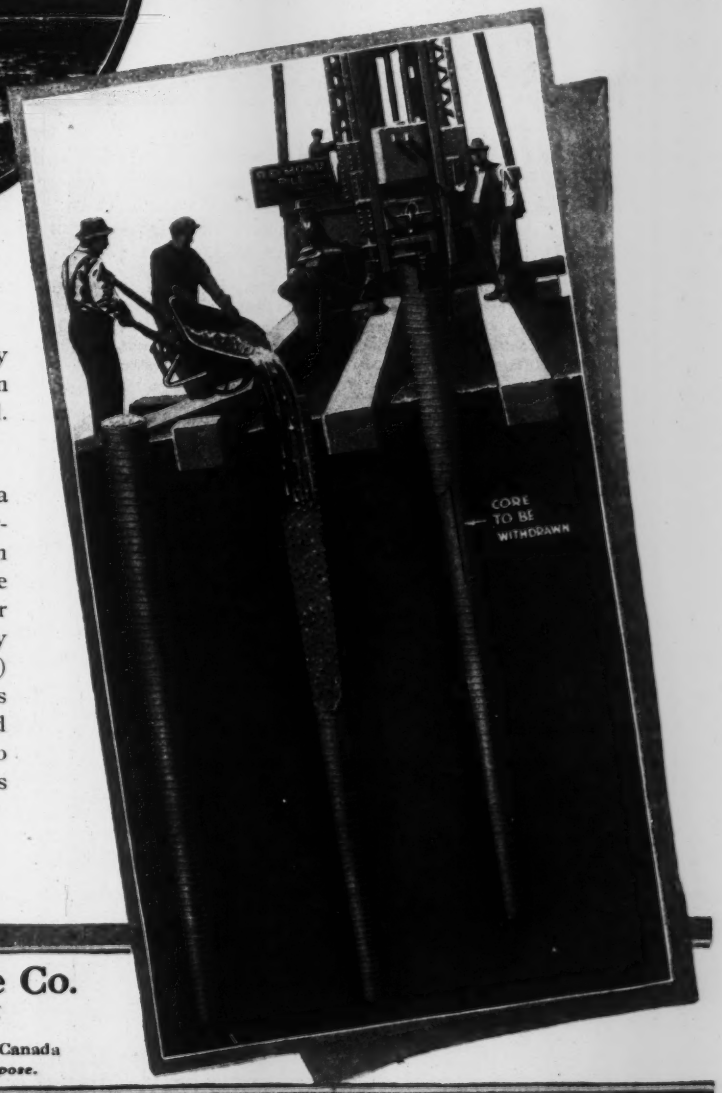
The Remedy *for* Lowlands

Raymond Concrete Piles



Concrete Piles driven in marshy soil *must* be formed by an absolutely dependable method. That is obvious.

In the Raymond method, a spirally reinforced and watertight steel shell is first driven over a collapsible core. This core is then withdrawn, the interior of the shell inspected and finally the shell (**left in the ground**) is filled with concrete. **This** is the method that has influenced numbers of big architects to specify that the concrete piles shall be Raymond.

Raymond Concrete Pile Co.

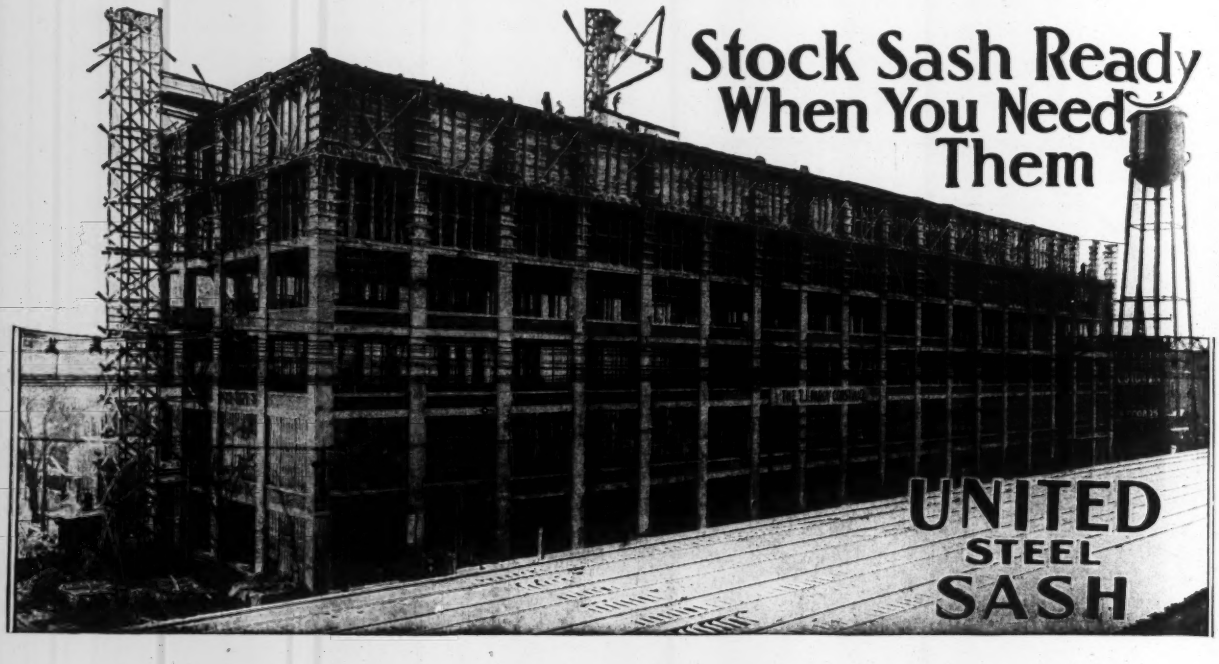
Chicago: 111 West Monroe Street.
Raymond Concrete Pile Co., Ltd., Montreal, Canada
A Form for every Pile—A Pile for every purpose.



In these busy days you cannot afford to wait for building materials. In our main warehouse at Youngstown we have large stocks of sash units (shown below) to meet practically all building requirements. All units are furnished in two glass sizes, 12 in. x 18 in. and 14 in. x 20 in. The sash are the same high-quality United Steel Sash which have demonstrated their superiority in so many tests and investigations.

We also furnish Semi-Stock Sash, in which the ventilators are carried in stock and frames made to order—as well as To-Order Sash to meet any special requirements. The complete line of United Steel Sash includes everything in pivoted and sliding sash, continuous sash, partitions, doors, etc.—all distinctly superior in strength, weathering, workmanship, hardware, finish and service.

For quick deliveries, specify stock sizes of United Steel Sash, thus saving time and money. Write for Stock Sash Pamphlet or complete Sash Handbook.

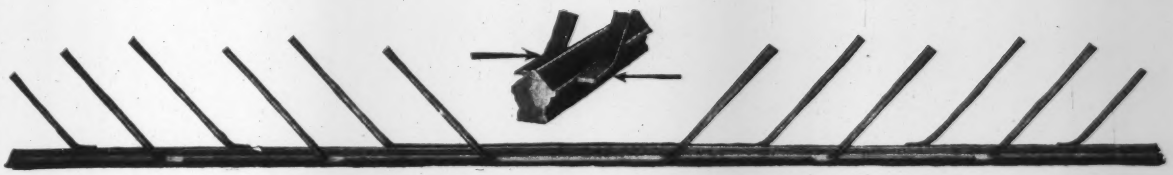
Note Rigidly Connected Shear Members.

20% Stronger
10% Cheaper



KAHN TRUSSED BAR

The **Kahn Trussed Bar** for reinforcing concrete consists of a main horizontal bar and **rigidly connected diagonal shear** members. The cross section of the bar has two horizontal flanges projecting at opposite sides. These flanges are sheared up at intervals to form the rigidly connected diagonals, making a unit of main bar and shear members.

Kahn Trussed Bars save steel, because the shear members are formed from that portion of the flanges of the main bar where the whole section is no longer required to resist bending moment. This saves the entire expense of additional steel required for loose stirrups.

Kahn Trussed Bars save labor of installing many loose separate bars, because shear members and main bar are handled as one piece.

Kahn Trussed Bars safeguard the structure because the rigidly connected shear members make its strength independent of the adhesion of the concrete. Loose stirrup designs depend upon this adhesion, which may be destroyed by fire, shock, or careless workmanship.

Kahn Trussed Bars make beams 12% to 30% stronger than where loose stirrups are used, as proven by University tests.

The web members of **Kahn Trussed Bars** are inclined at 45 degrees at right angles to the plane of weakness in the beam and present a flat surface to the compression stresses, which grip them like a vise.

Our products cover the field of reinforced concrete completely, including, in addition to Kahn Trussed Bars—Rib Bars, Column Hooping, Rib Metal, Floretyles, Hy-Rib, Kahn Mesh, etc., etc.

If you are interested in building write for our suggestions and literature.

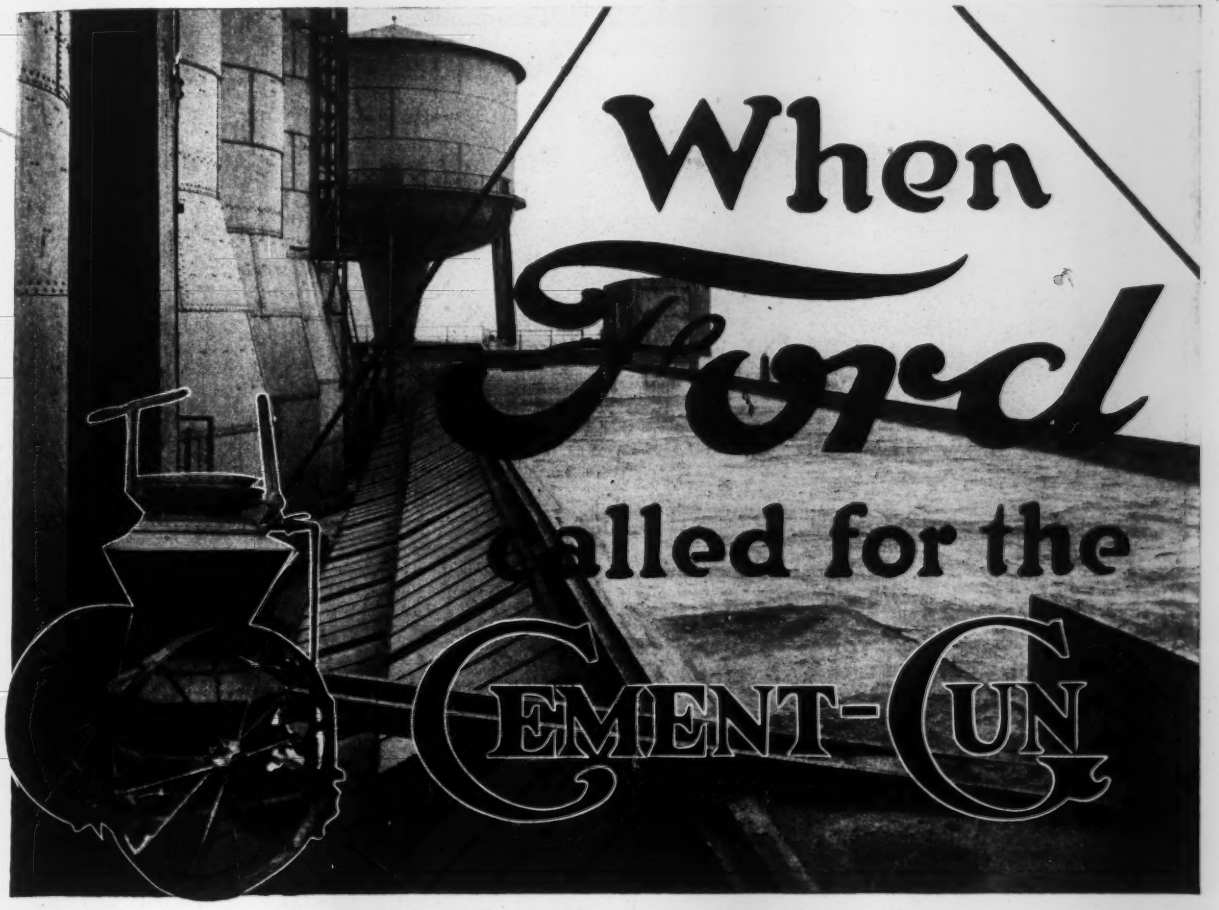
CAMDEN FORGE CO.
Fairview Ave., CAMDEN, N.J.



Ford sent for the Cement-Gun Construction Co. of Chicago, and here's what they did with **"Gunite."**

(1) Built a new roof and sidewalls for the penthouse roof at the power plant—65,000 sq.ft. of 2-in. **"Gunite."**

(2) Cooling ponds for condenser water on roof of adjoining building had been built of ordinary concrete and were disintegrating under the action of hot water. This vast pond 875 x 75 ft. was made **watertight** with **"Gunite."**

(3) All columns and girders in power plant (to be encased in brick) were first protected with ½ to 2 in. of **"Gunite."**

(4) Four large basins on the ash floor, each 50 x 125 ft. were made waterproof and heatproof by 2½ in. of **"Gunite."**

(5) Five large steel smokestacks (brick-lined) were raised 50 ft. in height and the new sections lined with 1¾ in. of reinforced **"Gunite."**

(6) Service tunnel connecting the different Ford buildings—10 x 12 x 4000 ft. long, was made permanently watertight with ¾ in. of **"Gunite."**

The Cement-Gun was recommended to the Ford Motor Company for this important work by T. L. Condron Co., their consulting engineers.

Write for complete data on the full scope of the Cement-Gun.

Substantial, Good-Looking Buildings in Thirty Working-Days

AUSTIN Standard Factory-Buildings are designed for "the beauty of perfect utility," without a single unnecessary detail. Yet we can make them conform to an established architectural style and still complete them in 30 working-days from the date of the order. Witness the Austin Standard No. 3, shown here, which was built for the General Electric Company at Schenectady.

The building, 100 x 300 feet, was begun April 23 and completed May 31—exactly 30 working-days, eliminating holidays and half-holidays. The architectural details of the facade conform to the established style.

When your clients need new buildings in exceptionally quick time, consider one of the nine Austin Standards. If individual design is necessary, ask about our quick construction and guaranteed time of delivery.

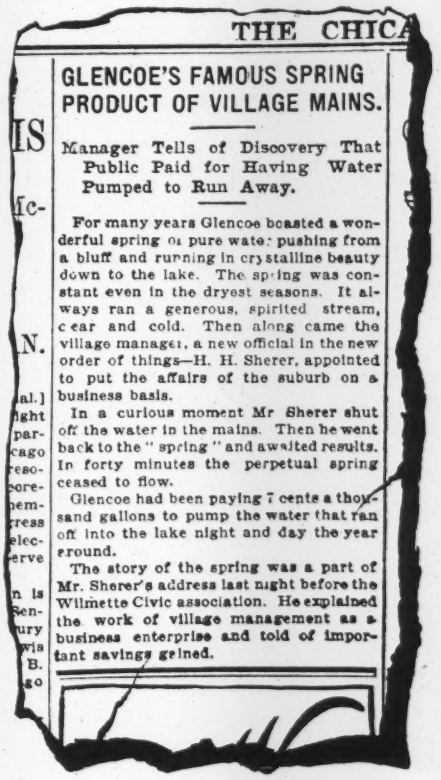
VENTURI

A Venturi Meter Would Have Saved Glencoe Thousands of Dollars



THE CHICA

GLENCOE'S FAMOUS SPRING PRODUCT OF VILLAGE MAINS.

Manager Tells of Discovery That Public Paid for Having Water Pumped to Run Away.

For many years Glencoe boasted a wonderful spring of pure water pushing from a bluff and running in crystalline beauty down to the lake. The spring was constant even in the dryest seasons. It always ran a generous, spirited stream, clear and cold. Then along came the village manager, a new official in the new order of things—H. H. Sherer, appointed to put the affairs of the suburb on a business basis.

In a curious moment Mr Sherer shut off the water in the mains. Then he went back to the "spring" and awaited results. In forty minutes the perpetual spring ceased to flow.

Glencoe had been paying 7 cents a thousand gallons to pump the water that ran off into the lake night and day the year around.

The story of the spring was a part of Mr. Sherer's address last night before the Wilmette Civic association. He explained the work of village management as a business enterprise and told of important savings gained.

Glencoe, Ill., paid dearly for its distinction of having a beautiful spring rushing over a bluff into a lake located in a suburb of the town.

It took years to discover that the source of this perpetual flow came from a break in the water main and that Glencoe had been paying 7 cents per thousand gallons for the privilege of this spectacle.

Contrast this waste due to the absence of reliable measuring facilities with that of the huge saving effected at the village of Ilion, N. Y., where a 12-inch

VENTURI METER

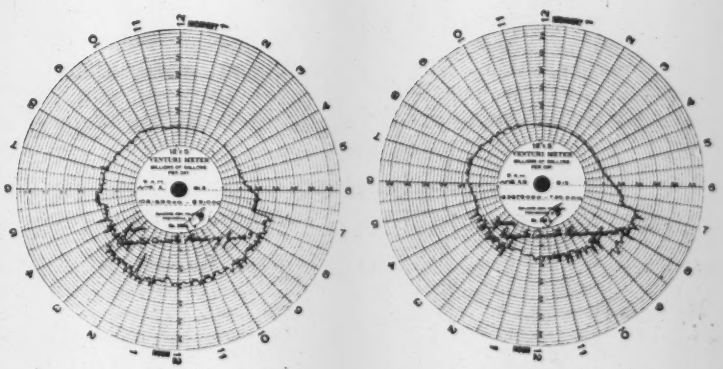
detected almost *immediately* a leak amounting to 160,000 gallons per day.

An investigation was started at Ilion because the Venturi Meter chart showed a sudden increase in the night rate which was considered excessive.

Careful search revealed a large number of leaking taps and fixtures. These were corrected, with the result that four weeks later a daily saving of 160,000 gallons or nearly 18% of the total supply was recorded.

Do you know whether or not your water mains are feeding springs? Venturi Meters will tell you and will place your water distribution economy in the "Ilion Class."

Bulletin No. 84-N gives full details. Address Department "Y."



Two charts from Venturi Meter at Ilion, N. Y., showing how a leakage of 160,000 gallons per day was discovered and corrected.

Erie Revolving Shovels

"Smile With Me!"

Bill Muldoon Says: "Not long ago the man I consider the greatest editor of our greatest technical journal looked over his boys and girls working in the outer office. He leaned back and smiled—and here's what he said to me:

"'There's no doubt about the advantage of the foreman or manager speaking the language of his foreign employee.

"'But in lieu of such knowledge he can make frequent use of *the universal language—the smile.*

"'The two ideas are fundamental, and so important that they are worth passing on to all employers, even to those who do not employ immigrants.

"'Fair play, the confidence of associates, the disposition toward one's fellows and one's work that displays itself in a smile, will help win in any walk of life.'"

"Good dope, says I. But you don't need to prescribe it to an ERIE SHOVEL user. He comes by his smile *naturally.*

"Take the fellow who had to cross under the Boston "L" tracks with his Erie Shovel for instance: He just let down the stack and slacked away his boom, and was ready right away for 12 ft. 9 in. overhead clearance. The ERIE has a lot more working points you can use in your business.

"Ask any ERIE owner,

"And watch him smile!"

Bill Muldoon.

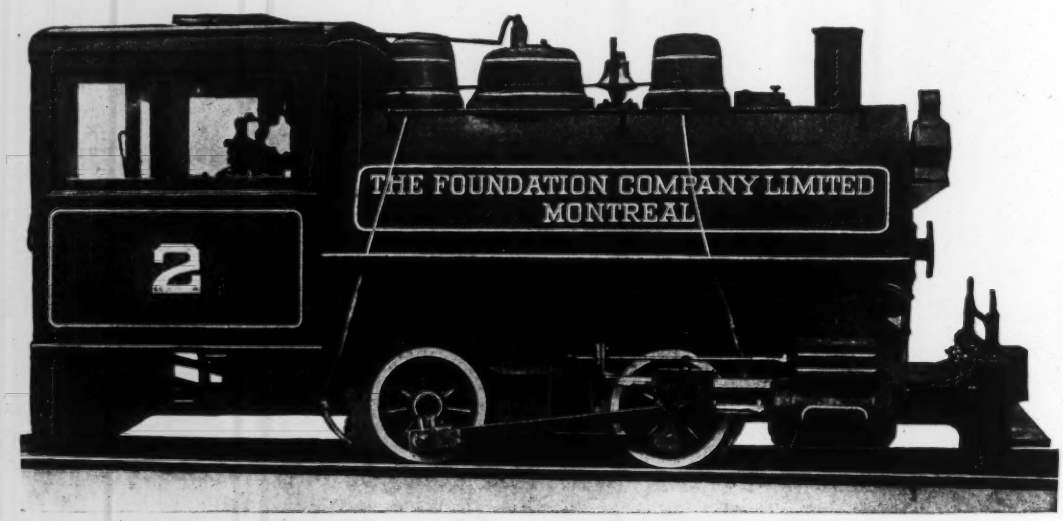
Performance Counts

KEEP THE WORK GOING



Nothing is more important in contracting work than the prompt and certain movement of material.

Delays affect the whole work. To avoid delays locomotives must be reliable and always ready for service.

Our standard Contractors' locomotives are built to insure reliability and constant service. Only tested materials are used in their construction. All wearing parts are made to templates and gauges. Interchangeability of like parts is guaranteed, and long delays waiting for duplicate parts avoided, as duplicate parts are kept in stock at our Works for prompt shipment.

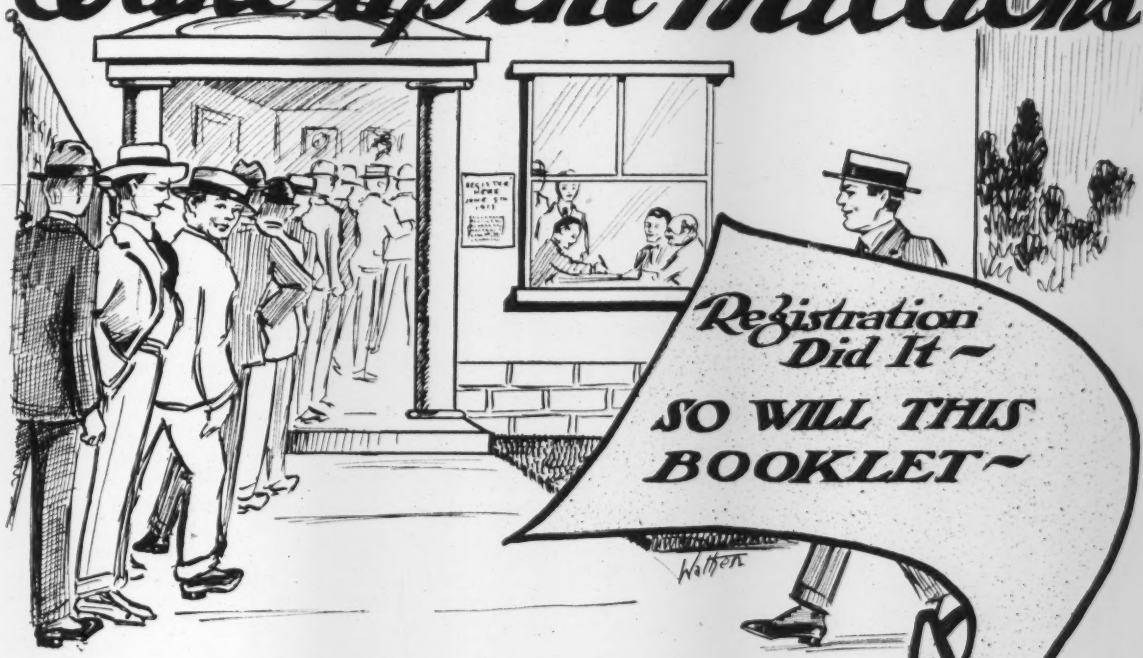
Wake up the Millions!



This country is at war—yet thousands—hundreds of thousands would not realize it—it took the definite action of registration day—the unaccustomed walk from home to poling place—the answering of questions—to make them realize that a foe lurked at our very doors.

And so with that enemy whose talons have gripped more victims than many wars—"TYPHOID"—the scourge of modern civilization.

Multitudes will not realize its deadly work—they know not how to count its frightful cost. Each day they fight all efforts for pure water and lessening disease—they are content to cast their lot with death.

They must awake! And this booklet will make them. It is for your use—to give to alderman—influential citizens—taxpayers who now fight the small cost of liquid chlorine and a pure water supply—because they cannot realize what this protection means in *dollars and cents.*

This booklet is non-technical—it is highly interesting and it calls the count on Typhoid at every turn. Get copies of this booklet—let it help you awake the millions to the profit in elimating B. Coli.

Copies are free—mail the coupon for a sample—NOW.

AID No. 4
(*of the 17 Michigan Water Service Aids*)

Wet Trench Never Halts

MICHIGAN Combination Steel and Wood Water Pipe

"Steel for Strength—Wood for Durability"

Any water-service man who has tackled a wet trench with sheeting and pumps and *then*—tied up because high water stopped the caulkers—can appreciate this service-aid of MICHIGAN PIPE.

You can lay it in a wet trench.

For there is no caulking required and you can lay a MICHIGAN PIPE line with common labor. Accurately turned mortise and tenon joints are quickly fitted and rammed home with a plain wooden ram.

You can make *speed*—in pipe-laying—even in a wet trench.

A word from you brings full data on the 17 service aids of Michigan Pipe.

Here are FIVE of the SEVENTEEN

(1) More than 40 years' service have proven its DURABILITY.

(2) FROSTPROOF—Pressure of internal ice never burst Michigan Pipe.

(3) PROOF AGAINST CORROSION—Chemical plants use it.

(4) LAID WAIST DEEP IN WATER.

(5) Watch this page next week or—**Write now for the latest Michigan Handbook.**

The Michigan Pipe Co., Dept. 17, Bay City, Mich.

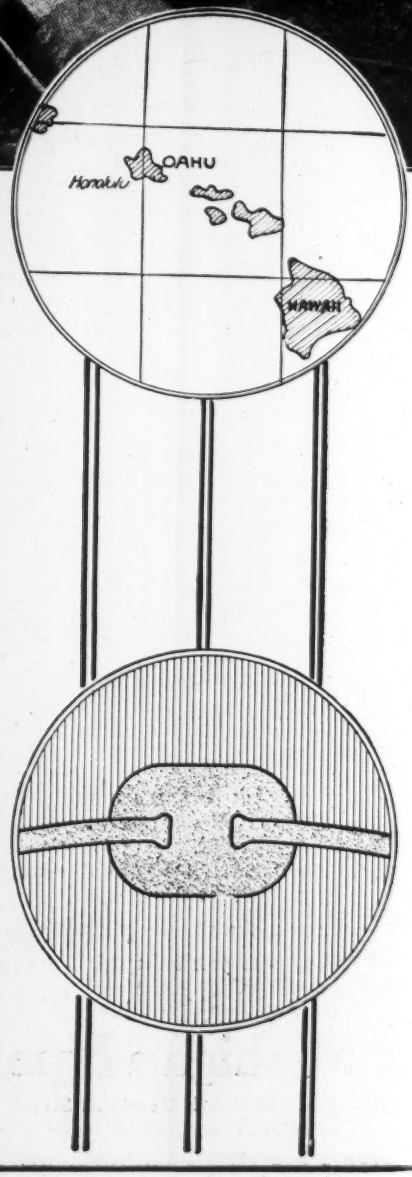
319 Hamilton National Bank Bldg., Chattanooga, Tenn. 412 Security Bldg., Galveston, Texas



This Picture Was Taken Nine Years ago —in OAHU

Oahu is the one of the Hawaiian Islands on which Honolulu is located.

The picture you see shows an 8000 ft. pipe line built back of Honolulu in 1908.

5600 miles from home—the pipe had to be of material that would not require repairs.

That's why

LOCK BAR STEEL PIPE

was used. The engineers knew the extra safety in the Lock Bar Joint—which is 100% efficient or in other words develops 100% of the strength of the plate.

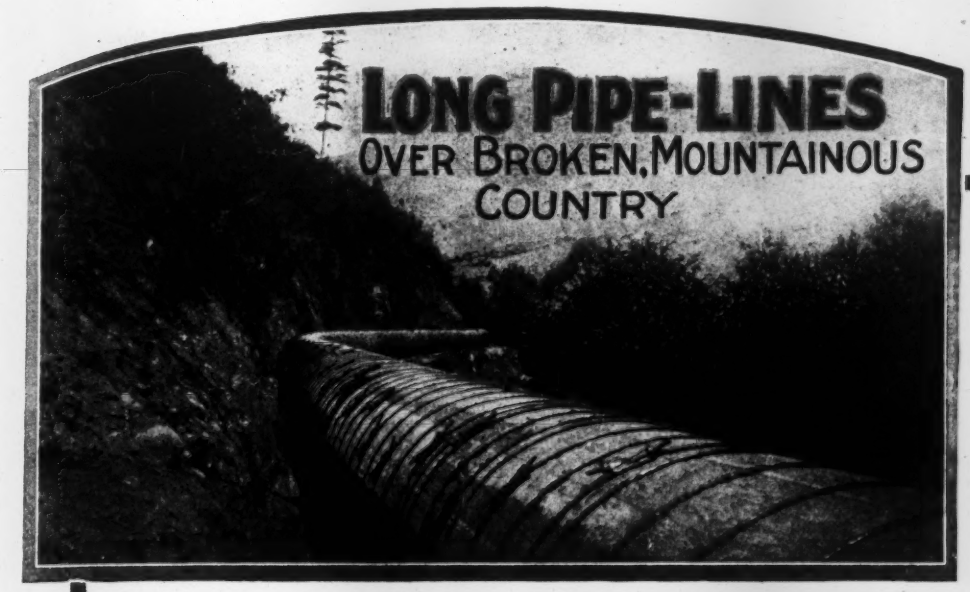
The use of Lock Bar Steel Pipe also *saved money*—for the joint efficiency guards against the purchase of useless metal.

Some of our data on low per year costs on city and private projects will prove very interesting. Tell us something about your proposed work and we'll send some startling information.

EAST JERSEY PIPE CORPORATION

Fulton and Church Sts., New York City

Works: Paterson, N. J.



Present small difficulty when Pacific Wood Pipe is used

Pacific Wood Pipe

is made of either Redwood or Douglas Fir, as the purchaser desires and the occasion demands. That it is wood pipe in its highest form is attested by the installation of hundreds of thousands of feet every year for the past 30 years.

Is cheaper than steel, wrought or cast iron pipe.

Exceeds steel and wrought iron pipe in durability, classes with cast iron pipe.

Is preserved by water, not rusted.

Is not corroded by sulphur, salt or mineral water or fumes.

Is not destroyed by acids or salts.

Has greater carrying capacity.

Does not burst when frozen.

Can be laid in shallower ditches, or exposed.

Requires less labor to lay.

We solicit the opportunity to have our engineers show you how to get a better, less expensive pipe—in any diameter from 2 inches to 14 feet. Write us.

Also Pacific Tanks.

PACIFIC TANK AND PIPE COMPANY

Guess-Work

PERHAPS there was a time when guess-work served the purpose.

When industrial services consumed approximately the same amount of water month after month, and year after year, estimates or partly efficient meters may have been all right.

But now—when the factories of the nation are meeting abnormal war-time demands in addition to caring for a booming home trade and a fast-growing export business—when the amount of water *needed* has doubled and trebled and the incentive to *careless waste* has correspondingly increased—guess-work won't do!

To prevent a water-loss and a money-loss far exceeding the cost of installation, meters—efficient meters—are demanded.

Large meters are now a necessity!

In Trident-Disk, Trident-Crest, Trident-Compound and Trident-Protectus Meters, you have dependable revenue-producers. Order now to secure speedy delivery.

WORTHINGTON CORPORATION

Worthington and Laidlaw Pumps for Elevator Service —Boiler Feeding —Brine Pumping

The Broadway Department Store
Los Angeles, Cal.

The Broadway Store is a modern nine-story structure with basement and sub-basement, covering eleven acres of floor space.

Its elevator service consists of thirteen passenger, and four freight cars. The passenger cars have a speed of 425 feet per minute; the freight cars, 110.

The Pumping Engine for elevator service is a **Laidlaw** three cylinder, 20 x 25 x 25 x 13½ x 24, furnishing 2400 gallons per minute for the seventeen cars.

Night and Sunday service is furnished economically by two **Worthington Turbine Pumps**, each a 6 in. three stage, direct connected to a 200 H.P. Westinghouse motor. The pumps each have a capacity of 1300 G.P.M. against 175 lb. pressure. These pumps are said to be the largest turbine elevator pumps in use in this country. Their large capacity was the direct reason for the choice of an exactly similar unit for the Bullock Department Store, Los Angeles.

Other Worthington Pumps in the Broadway Department Store are: two 6 x 46 Duplex Boiler Feed Pumps; one 6 x 4 x 6 Duplex Pump for brine pumping.

The excellent service obtained from these Worthington Products furnishes an example of units whose design, construction and performance record is strikingly adequate to the conditions of service.

Back of this and many other notable installations, lies a ripe and valuable experience in the manufacture of hydraulic machinery, which is freely offered to engineers who have pumping problems.

On request, we will send bulletins covering any or all types of pumps, condensers, air compressors, water meters.

Insley Counterweighted Chute

for use in connection with

Gravity Plants for Concrete Distribution

Insley Counterweight Chute as used by McDonald & Kahn, San Francisco

The Insley Counterweight Chute, made in 30, 40 and 50 foot lengths, makes it possible to pour concrete anywhere within a 100 foot radius with a tower-supported chute plant. The elimination of both overhead suspension cables and floor supports provides a flexibility of operation which results in a marked lowering of the task of placing concrete.

Write for particulars.

"They Can't Slip—See the Ribs"

This peculiar rib construction, found only in Corrugated Bars, makes it impossible for them to slip in the concrete when under stress.

To combine greater safety and permanence with your concrete construction, use

Corrugated Bars

Round or square bars; standard sizes, cut to any length from stock carried in Chicago, St. Paul, St. Louis, Youngstown, Atlanta, Philadelphia, Boston and Buffalo.

Prompt Shipments

In writing for information, please state your building requirements and give names of your architect and contractor. Please use business letterhead or enclose card.

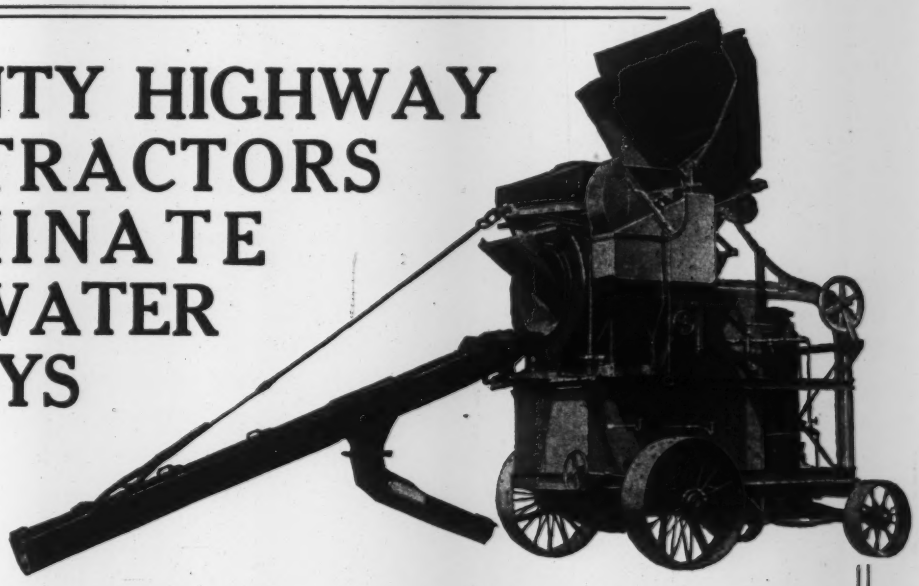
COUNTY HIGHWAY CONTRACTORS ELIMINATE ALL WATER DELAYS

WITH THE



Smith-Chicago H-D Pavers

An abundance of material on hand, a well-trained gang loading the mixer at top speed, the paving mixer leaving a trail of well-mixed concrete behind it, rosy dreams of big profits and then it happens—the whole gang idle because the stream of water from the pipe line dwindled away to a few drops and then stopped. Ten minutes' delay and things again begin to hum—but ten minutes were lost absolutely. Golden dollars slipped out of your hands—and this happens not once but frequently.

The answer to this problem is securely fastened to the frame work just over the mixer drum on the fast, one-man Smith-Chicago High-Drum Paver—a RESERVE TANK holding enough water to take care of SEVEN batches of concrete, enough to keep the gang going while the usual pipe line trouble is overcome.

That isn't all that makes the S-C High-Drum Paver of immense value to the highway contractor. There are NINE other BIG FEATURES that this machine has, not more than one or two of which are found on other types of pavers. Read the whole story in our BIG, NEW CATALOG.

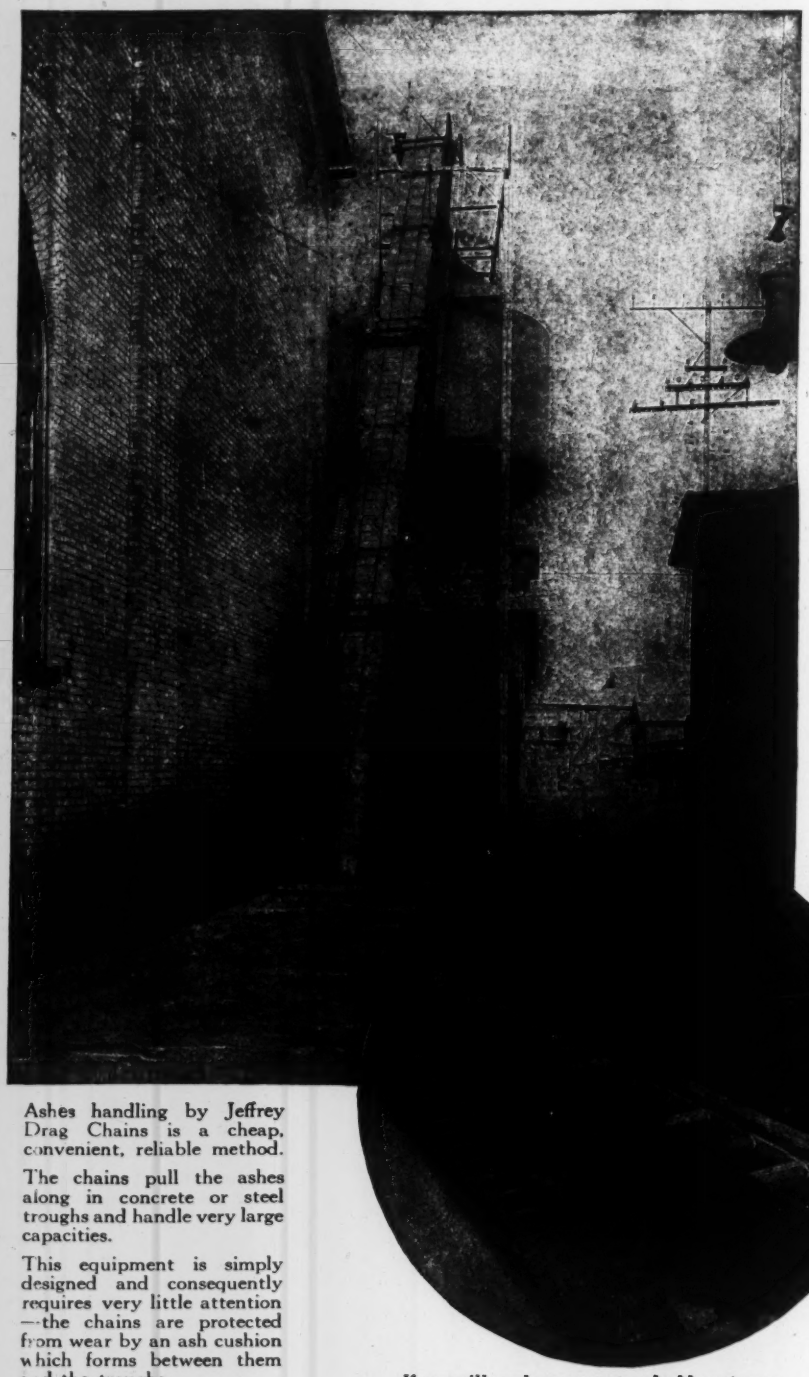
SMITH-CHICAGO HIGH-DRUM PAVER



—and then Up

Ashes in the Power House of the American Iron & Steel Mfg. Co., Lebanon, Pa., are carried along in a trough from under the Murphy Stokers by a

JEFFREY
RELIANCE DRAG-CHAIN ASH CONVEYER

—and then up by a 70 ft. Jeffrey elevator to the ash bunker.

This simple system, designed and installed by R. H. Beaumont Company of Philadelphia, and built by us gives the American Iron & Steel Co. an independent ash handling system at low cost.

The Ash Conveyer can be operated and watched from the boiler room above.

We build complete equipment for either coal or ashes handling and equipment combining both functions —all are made from Jeffrey **Standard Units** and you thus obtain special equipment at **standard** prices.

Ashes handling by Jeffrey Drag Chains is a cheap, convenient, reliable method.

The chains pull the ashes along in concrete or steel troughs and handle very large capacities.

This equipment is simply designed and consequently requires very little attention —the chains are protected from wear by an ash cushion which forms between them and the troughs.

A great variety of conditions can be met by adopting our standard units to the work.

If you will send your name and address to our Dept. 23, mentioning this ad, we will be glad to send you complimentary copies of two bulletins describing individual installations of Jeffrey Drag Chain Ashes Handing Equipment.

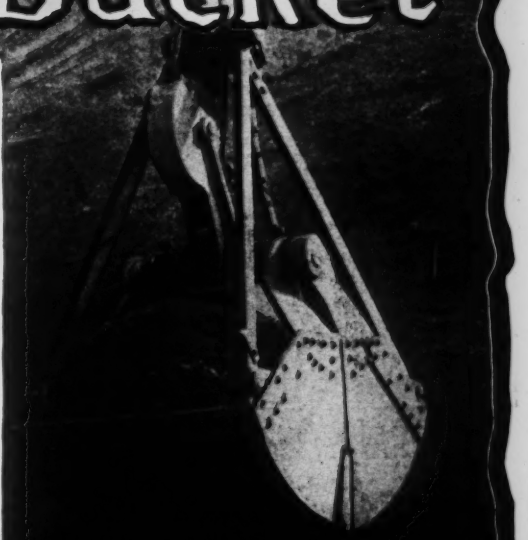
The Blaw Bucket



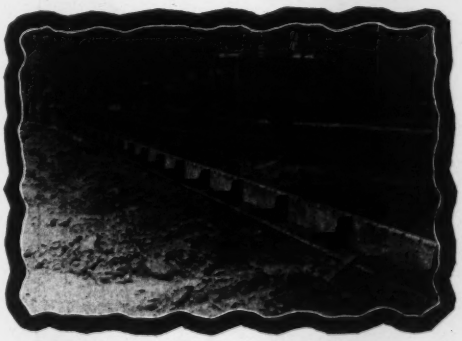
Proper distribution of the weight gives the Blaw Bucket the digging power to grab a full load every time.

The Blaw design has eliminated all unnecessary weight from the head. Over 90 per cent. of the weight is below the main hinge pin when the bucket is open.

That *concentrates* the weight directly on the cutting edges. That's why the Blaw Bucket drives deep—why it has the digging power to fill—from the most stubborn material any bucket can handle.

In stock for prompt shipment are Blaw Buckets for every purpose.

Write us about *your* requirements. We can fill them.



A single outfit of Blaw Steel Forms will handle an indefinite length of Sidewalk, Curb-and-Gutter and Road. Blaw Steel Forms last a lifetime.

Blaw Column Molds give a smooth, even surface, practically eliminating all refinishing. Better work—at lower costs—is done with Blaw Steel Forms.

Blawforms

PATENTED

will cut costs on almost every type of concrete job.

Unskilled labor can move and set up Blaw Steel Forms in far less time than highly skilled men can handle wooden forms. Moreover, Blaw Steel Forms are practically indestructible. They will pay for themselves—in the saving of labor and lumber—on a single fair-sized job. And the same forms are then ready for the next similar job—ready to pay big returns.

Tell us what your job is. We have cut costs on over 20,000 contracts—we can cut costs for you.

Cooperative Service to the Export Buyer

THE ALLIED CONSTRUCTION MACHINERY CORPORATION is a cooperative selling organization. It is under the management and direction of the American International Corporation, the largest financial organization in the United States devoted to the promotion of foreign trade. Participating with this financial interest is a group of non-competing American manufacturers who have turned their export business over to a common sales force.

The Allied Construction Machinery Corporation is that common sales force. It is neither an agency nor an intermediary—it is essentially a part of each of the several interests which have formed it.

Its cooperative sales plan offers many advantages. Among them are:

The foreign buyer who deals with it is dealing directly with a group of manufacturers.

The buyer can secure from this single export sales organization a complete line of construction machinery, backed by undivided responsibility for shipments, credits and guarantees.

The buyer deals with a sales organization of engineers experienced in the use of construction machinery. These engineers are qualified to recommend the class of equipment best adapted to the buyer's requirements. Since it sells a complete line, its recommendations are unbiased.

The foreign buyer of American construction equipment can secure these advantages only by purchasing from the Allied Construction Machinery Corporation.

The following manufacturers have joined this cooperative sales plan in all countries outside of the United States and Canada:

The Lakewood Engineering Company, Cleveland, Ohio
The Thew Automatic Shovel Company, Lorain, Ohio
The Parsons Company, Newton, Iowa
The Hydraulic Pressed Steel Company, Cleveland, Ohio
(Concrete Form Department)
The Western Wheeled Scraper Company, Aurora, Illinois
For France, Spain, Italy, Portugal, Belgium and their colonies; the West Indies and China.

Making the MOST of Your Men

Men are scarce and getting scarcer. Labor costs are soaring.

Day and night your small gangs give you bigger output when the job is well lighted.

Carbic Lights are quickly moved where and when needed. On the interior of buildings and in close quarters underground on foundation work—they give clear, clean light—free from smoke and soot. Charged in ⅓ the time required for other lights—and kept running full blast by common labor. No skilled attention needed.

Best of all—**they cost less to operate.** That is caused by the simple, automatic control of gas generation and—the CARBIC CAKE—the latest advance in lighting material.

We prove these facts on your work—ree of cost or obligation. **Put it up to us—write.**

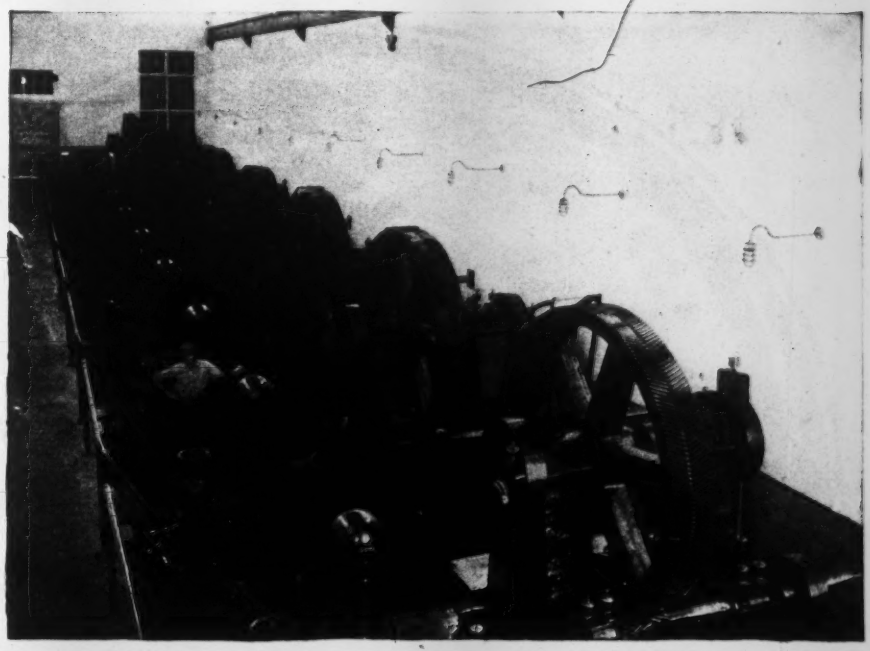
Look at Those Gears

See How Clean and Even the Teeth Are



For more than Two Years These Gears *have been running Right*

They have been running surely, evenly, noiselessly.

There has been little or no wear on the teeth.

Because over two years ago they began to LUBRICATE these huge pump gears with

TEXACO CRATER COMPOUND

The Great Gear Lubricant

When you put TEXACO CRATER COMPOUND on a set of gears you really LUBRICATE them.

TEXACO CRATER COMPOUND stays where it is put. It doesn't drip. It isn't squeezed out or flung off by centrifugal force. It doesn't crack, harden, peel or flake. It's a pure lubricant and always oily to the touch. It keeps a live film of lubricant between the wearing surfaces. Reduces friction. Prevents cutting. Banishes noise. It doesn't make any difference how large or heavy the gears are, CRATER makes good. CRATER is being used today on gears of all kinds, on pumps, on steam shovels, on dredges, on road rollers, and elsewhere.

The CRATER BOOK, 32 pages, illustrated, tells more about it. Write for a copy—or better yet, ask us to send you a 25-pound can on approval. We'll send this express prepaid and you won't be called upon to pay for it unless you are absolutely satisfied.

There is a Texaco Lubricant for Every Purpose.

Contracts To Be Let

PROPOSALS

Bids received until July 13, 1917.

Barge Canal Terminals

STATE OF NEW YORK, OFFICE OF SUPERINTENDENT OF PUBLIC WORKS

Albany, N. Y., June 15th, 1917.

Sealed proposals will be received by the undersigned at his office in the Capitol at Albany, N. Y., until twelve o'clock noon of Friday, July 13th, 1917, at which place and hour they will be publicly opened and read, for the construction of Barge canal terminals pursuant to the provisions of Chapter 746 of the Laws of 1911, and of the acts amendatory thereof, as follows:

TERMINAL CONTRACT NO. 103.

For furnishing, installing and testing portable package freight conveyors for terminals at Rochester, Utica and Schenectady.

Contract plans sheets 1 and 2.

Plans may be seen and detailed specifications, engineers' estimate of quantities, proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y., at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y.; at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office, Spaulding's Exchange, Buffalo, N. Y.

Copies of detailed plans of drawings may be obtained from the State Engineer and Surveyor at Albany, N. Y., upon payment to him of the cost of producing them.

Monthly estimates will be paid of ninety per centum (90 per cent.) of the work done at the contract price. Every proposal for said work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the City of Albany or New York, issued by a national or State bank, in good credit within the State and payable at sight to the Superintendent of Public Works for five per centum (5 per cent.) of the amount of the proposal.

The person whose proposal shall be accepted will be required to execute a contract and furnish bonds within ten days from the date of notice of award delivered to him or them in person or mailed to the address given in the proposal.

Upon execution of the contract and approval of bonds, the certified check or draft will be returned to the proposer unless the same shall have been presented for collection prior to such time, in which case the amount of the deposit will be refunded by the Superintendent of Public Works.

The deposits of bidders other than the one to whom the award of contract shall be made will be returned immediately after the award has been made.

The bond required for the faithful performance of each contract shall be in such sum as shall be fixed by the Superintendent of Public Works, which sum shall not be less than twenty per centum (20 per cent.) of the estimated cost of the work according to the contract price, and an additional bond, known as the labor bond, in the sum of ten per centum (10 per cent.) of the amount of the estimated cost of the work according to the contract price, will be required as security that the contractor will pay in full at least once in each month all laborers employed by him upon the work specified to be done in the contract.

In the event that more than one surety company is offered as surety on said bonds co-insurance only will be accepted.

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned, the interests of the State will be enhanced thereby. W. W. WOTHERSPOON,

Superintendent of Public Works.

Bridge Superstructure for Sale

Bridgeport, Conn.

Sealed proposals will be received by the undersigned until 12 o'clock noon, Monday, July 2, 1917, for the sale of approximately 300 tons of wrought iron bridge superstructure—bridge built in 1888 and used for general highway and street railway traffic.

The bridge consists of one pony iron truss draw span, 174 ft. 5 in., center to center of end posts; with iron floor beams; depth of trusses at center, 12 ft. Weight approximately 150 tons.

Eight iron lattice deck girder spans about 41 ft. each.

Weight approximately, 150 tons.

Roadway of draw span about 28 ft.

Roadway of fixed spans about 31 ft.

Sidewalks about 9 ft.

Material to be available about August 15, 1917.

Check of 5% of total bid to accompany each bid.

The Board reserves the right to accept or reject any or all bids.

Board of Contract & Supply,
Room No. 23, City Hall, Bridgeport, Conn.

Bids received until July 9, 1917.

Concrete-Steel Viaduct

Barberton, Ohio.

Sealed proposals will be received at the office of T. J. Davies, Director of Public Service, Barberton, Ohio, until twelve o'clock noon, Central Time, on Monday, July 9, 1917, for the complete construction of a concrete-steel viaduct known as the Tuscarawas Avenue Viaduct, in accordance with the plans and specifications approved by the Court of Common Pleas of Summit County, Ohio, in cause No. 21,469, City of Barberton, Plaintiff, vs. The Baltimore & Ohio Railroad Company, et al., defendants, which said plans and specifications are now on file in the office of H. W. Alcorn, City Engineer, Barberton, Ohio. Proposals shall be made on the blank forms furnished by the City, and must be accompanied by a satisfactory surety company bond for the amount of the bid, or a certified check for ten thousand dollars ($10,000.00), made payable to the Treasurer of the City of Barberton. They shall be enclosed in an envelope bearing the name and address of the bidder, marked "Proposal for the construction of the Tuscarawas Avenue Viaduct Improvement," and addressed to the Director of Public Service. The bids will be opened and publicly read at the hour and date above given.

Copies of the plans and specifications may be seen at the office of the City Engineer, or at the office of Daniel B. Luten, Consulting Engineer, Indianapolis, Indiana; or copies may be obtained from either of the above on payment of ten dollars ($10.00) which will be returned to those submitting bids upon the day of the letting, provided the plans and specifications are returned in good condition.

Bidders are also invited to submit bids on their own plans. Such plans must be in strict conformity to the specifications on file, and must be completely detailed and must show the number of spans, the length of each, the nature, quality, and size of the materials to be used, the strength of the structure when completed, and whether there is any patent on the proposed plans, or on any, and if any, what part thereof.

Only bids from contractors who are experienced in this class of work and whose financial standing is sound will be considered. The right is reserved to reject any or all bids or to waive irregularities in bids if it is deemed to be to the interest of the City to do so.

T. J. DAVIES,
Director of Public Service.

Bids received until August 2, 1917.

Bridge Construction

Miami, Fla.

Sealed proposals, to be filed with W. B. Moore City Clerk, will be received by the City of Miami, Florida, up to 7:30 p.m., August second, 1917, for the construction of a bridge over the Miami River.

The bridge will have a total length of 265 feet between end piers and will provide a 20-ft. roadway and two sidewalks each 6 ft. wide. It will consist of six piers and 5 steel deck spans with lumber floor, one span being a double leaf bascule span. Payments will be made in cash and monthly estimates will be rendered. To all bids there shall be attached a check of the bidder, certified to by a responsible bank, made payable to W. B. Moore, City Clerk, for an amount of 10 per cent. of the bid, and the bidder, who has a contract awarded to him and who fails promptly and properly to execute said contract and bond shall forfeit said amount, which is to be taken and considered as liquidated damages, but not a penalty for failure of bidder to execute contract and bond. Upon the execution of the contract and bond by the successful bidder, said check will be returned to him. The checks of unsuccessful bidders will be returned to them after the contract and bond of the successful bidder are executed. The contract will be awarded to the lowest responsible and competent bidder, but the City of Miami reserves the right to reject any and all bids and to waive informalities. Plans and specifications are on file in the office of the City Clerk, Miami, Florida, and in the office of Harrington, Howard & Ash, Consulting Engineers, Kansas City, Missouri. Copies of the plans and specifications may be secured from the Consulting Engineers by depositing twenty-five dollars therefor. Such plans and specifications are to be returned upon request, at which time refund of twenty dollars will be made.

W. B. MOORE,
City Clerk.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., June 16, 1917.—SEALED PROPOSALS will be opened in this office at 3 p.m., July 9, 1917, for the construction of the United States Post Office at Glenwood, Iowa. Drawings and specifications may be obtained from the Custodian of the site at Glenwood, Iowa, or at this office, in the discretion of the Acting Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

PROPOSALS

Bids received until July 5, 1917.

READVERTISEMENT

Reinforced Concrete Bridges

Lawrence, Mass.

Sealed proposals for the construction of two (2) reinforced concrete bridges together with the grading and paving of approaches necessary to connect the structures with the City streets and the Central Bridge over the Merrimack River in the City of Lawrence, Massachusetts, will be received by the Mayor and City Council at the office of the City Clerk until 11 o'clock A. M., July 5, 1917, at which time and place the proposals will be opened and tabulated.

Copies of the plans and specifications, including form of proposal, may be obtained by Contractors at the office of B. H. Davis, Consulting Engineer, 17 Battery Place, New York City, upon making a deposit of Twenty-five ($25.00) Dollars, which sum will be refunded to all bidders upon the return of the plans and specifications in good order and to all other contractors returning same before bids are received.

A certified check for the sum of $5,000.00 payable to the City of Lawrence must accompany each proposal. Each proposal, accompanied by its certified check payable to the City of Lawrence, must be endorsed "Proposal for the Construction of Canal Bridges and Approaches" and must be delivered to Edward J. Wade, City Clerk, City Hall, Lawrence, Mass. A satisfactory surety company bond for 60% of the estimated contract price will be required of the contractor to whom the work is awarded.

The attention of bidders is directed to the fact that time of completion will be an important factor in the consideration of bids and the contractor to whom the work is awarded will be held strictly to the terms of the contract regarding the diligent prosecution of the work and the time of completion of the same. No proposal will be considered which fixes the date of completion of the bridges at a date later than November 1st, 1917.

Monthly estimates of the value of the work done and materials delivered will be made on or about the 1st of each month and payments amounting to 90% of such estimates will be payable on the 12th of each month. The right is reserved to reject any and all bids.

By order of the Mayor and Council.
EDWARD J. WADE, City Clerk.
B. H. DAVIS, Consulting Engineer.

Bids received until July 2, 1917.

Concrete Reservoir and Water Mains

Waverly, Iowa.

Bids will be received up to 5 o'clock P. M. July 2, 1917, for the construction of a 200,000 gallon reinforced concrete reservoir and 1200 feet 12 inch cast iron water mains with specials. Also for concrete wing walls and concrete apron for dam. A deposit of $5.00 is required for plans and specifications which are on file with the City Clerk.

F. A. LEE, City Clerk
O. P. CHASE, Engineer,
Clinton, Iowa.

Brick Road Improvement

Lafayette, Ind.

Notice is hereby given that the Board of Commissioners of Tippecanoe county, State of Indiana, at the County Auditor's office, in the City of Lafayette, Indiana, on the third day of July, 1917, up to the hour of ten o'clock a.m., will receive bids for the construction of 2.60 miles of brick road improvement in Fairfield township to be known as the M. P. Sheehan et al. road.

Also 2.02 miles of brick road improvement in Wabash township to be known as the Henry Klinker et al. road, as ordered by said Board to be constructed, and at the said time will let to the lowest responsible bidder, to contract for the construction according to specifications, plans, profile, estimate, etc., now on file in the office of the County Auditor of said county, at Lafayette, Indiana.

Bidders will be required to file with their bids bonds for double the amount of said bids, conditioned according to law at least one of which sureties on such bond must be a resident of said county, or a Surety company doing business in the county, and affidavits denying collusion as the law provides.

The right to reject any and all bids is reserved.

A reasonable time to be hereinafter fixed will be allowed for completing the work.

GEORGE W. BAXTER, Auditor.
E. C. MINTON, Engineer.

PROPOSALS FOR STONE-CONCRETE SUPERSTRUCTURE.—U. S. Engineer Office, Buffalo, N. Y.—Sealed proposals will be received here until 11 A.M., July 10, 1917, and then opened, for constructing stone-concrete superstructure on breakwater, Buffalo Harbor, N. Y. Information on application.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., June 20, 1917.—Sealed proposals will be opened in this office at 3 p.m., August 9, 1917, for the construction of the United States Post Office at Dubois, Pa. Drawings and specifications may be obtained after July 5, 1917, from the Custodian of the site at Dubois, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

PROPOSALS

Bids received until July 10, 1917.

Highway Construction

Rockville, Md.

Sealed proposals, addressed to the County Commissioners of Montgomery County, Maryland, and endorsed "Proposals for building a section of State Aid highway in Montgomery County," upon or along the Seneca Bridge Road between Darnestown and Seneca Bridge for a distance of 3.50 miles, will be received by the County Commissioners of Montgomery County, at their office, Rockville, Md., until 12 o'clock noon, on the Tenth day of July, 1917, and at that time and place will be publicly opened and read.

All bids must be made upon blank forms to be obtained of the State Roads Commission at its office, 601 Garrett Building, Baltimore, Md., must give the prices proposed both in writing and in figures, and must be signed by the bidder, with his address.

Each bid is to be accompanied by a certified check for Two Hundred Dollars ($200.00), payable to the Treasurer of Montgomery County, said check to be returned to the bidder unless he fails to execute the contract should it be awarded to him.

Plans can be seen and forms of specification and contract may be obtained on cash payment of One Hundred Dollars ($100.00), at the office of the State Roads Commission, Baltimore, Md.

The County Commissioners of Montgomery County reserve the right to reject any and all proposals.

By order of the Board of County Commissioners for Montgomery County, Maryland.

JOHN R. LEWIS, President,
BERRY E. CLARK, Clerk.

Bids received until July 12, 1917.

Brick Pavement

Olean, N. Y.

Sealed proposals will be received by the Commissioners of Public Works of the City of Olean, N. Y., at the office of the Superintendent of Streets in the City Building until 8 o'clock p. m. on the 12th day of July, 1917, for the construction of about 4800 square yards of brick pavement in Ninth Street from Washington Street to Irving Street.

Also, proposals will be received at the same place until 8 o'clock p. m. on the 16th day of July, 1917, for the construction of about 6280 square yards of brick pavement in East State Street from Union Street to the bridge over the P.R.R. tracks.

Plans and specifications may be seen and bid sheets procured at the office of the Superintedent of Streets, City Building, Olean, N. Y.

The right is reserved to reject any or all bids.

Dated June 23, 1917.

Library Building

DEPARTMENT OF PUBLIC WORKS, THE BOARD OF TRUSTEES, THE FREE LIBRARY OF PHILADELPHIA.

Philadelphia, Pa.

Sealed proposals will be received in Room 216, City Hall, addressed to the Director, Department of Public Works and the Board of Trustees, The Free Library of Philadelphia, until 12 o'clock noon on Thursday, July 12th, 1917, and opened at that time in Room 202, City Hall, for:

"The erection of the building for the Free Library of Philadelphia, to be located on a plot of ground bounded by Vine, 19th, Wood and 20th Streets in the City of Philadelphia."

"The amount of money available for the erection of this building is approximately $2,720,000."

Bids for this work will be received under three separate proposals as follows:

Proposal for Contract No. 1: For the entire work as covered by the plans and specifications, except the plumbing work, heating and ventilating work and electrical work. Attention is called to Item 1-a in the proposal, providing for an allowance or credit to the City of Philadelphia, to be deducted from the sum named in Item No. 1 provided it way be legally permissible to have the stone cut at any place, so that the said cutting be not limited to the City of Philadelphia; in which case the cutting of the stone may be done either within or beyond the boundaries of said city as the contractor may elect.

Proposal for Contract No. 2: Plumbing and drainage.

Proposal for Contract No. 4: For the electrical equipment work.

A certificate from the Law Department that a proposal bond has been filed must accompany each bid.

Bidders must fully acquaint themselves with all the legal and departmental regulations applying to contract work in the City of Philadelphia; see reference to various such regulations in the specifications.

Plans will be forwarded for various classes of work upon deposit of proper amount with the Architect. Copies of plans, drawings, and specifications for the above work can be secured from Horace Trumbauer, Architect, 1406 Land Title Bldg., Philadelphia, to whom all inquiries for additional information should be addressed.

THE BOARD OF TRUSTEES, THE FREE LIBRARY OF PHILADELPHIA,
JOHN ASHHURST, Librarian.
GEORGE E. DATESMAN, Director,
Department of Public Works.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., June 14, 1917.—Sealed proposals will be opened in this office at 3 p. m., July 26, 1917, for the construction of the United States post office at Gallatin, Tenn. Drawing and specifications may be obtained from the custodian of the site at Gallatin, Tenn., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

PROPOSALS

Bids received until July 6, 1917.

Laundry Extension

Central Islip, N. Y.

Sealed proposals for Construction Work—Extension to Laundry and Equipment, at the Central Islip State Hospital, Central Islip, N. Y., will be received by the State Hospital Commission, Capitol, Albany, N. Y., until three o'clock P. M., on Friday, July 6, 1917, when they will be publicly opened and read. Proposals shall be inclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a certified check in the sum of five per cent. (5%) of the amount of proposal. The contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent. (50%) of the amount of contract within thirty (30) days after official notice of award of contract and in accordance with the terms of Specification No. 2231, including Addenda dated May 3, 1917. The right is reserved to reject any or all bids. Drawings and specifications may be consulted at the Central Islip State Hospital, Central Islip, N. Y., at the New York Office of the Department of Architecture, Room 1224 Woolworth Building, and at the Department of Architecture, Capitol, Albany, N. Y. Drawings and specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon reasonable notice to and in the discretion of the State Architect, Lewis F. Pilcher, Capitol, Albany, N. Y.

E. S. ELLWOOD,
Secretary, State Hospital Commission.
Dated: June 11, 1917.

Bids received until July 10, 1917.

Building Removal and Erection

DEPARTMENT OF CITY TRANSIT,
754 BOURSE BUILDING
Philadelphia, June 18, 1917.

Sealed proposals, properly indorsed and addressed to the undersigned at the office above mentioned, will be received until 12 o'clock noon, on Tuesday, July 10, 1917, and opened immediately thereafter for the following work appurtenant to the Frankford Elevated Railway and authorized by Ordinances of Councils approved July 2, 1915, July 20, 1916, and March 6, 1917:

CONTRACT NO. 616—Removal of buildings at 3166 Kensington Avenue and at 3201-3-5 Kensington Avenue and erection of station buildings on these sites.

CONTRACT NO. 617—Removal of building at 3506 "K" Street and erection of station buildings on this site and at the southeast corner of Tioga Street and Kensington Avenue.

CONTRACT NO. 618—Erection of station buildings at the northwest and southeast corners of Torresdale and Kensington Avenues.

CONTRACT NO. 619—Removal of buildings at 4270-72 Frankford Avenue and at 4269-71 Frankford Avenue and erection of station buildings on these sites.

CONTRACT NO. 620—Removal of buildings at 4604 Frankford Avenue and at 4679-81 Frankford Avenue and erection of station buildings on these sites.

CONTRACT NO. 621—Alternate proposal, grouping bids for Contracts Nos. 616 to 620, inclusive.

CONTRACT NO. 622—Plumbing installations for station buildings.

CONTRACT NO. 623—Electrical installations for station buildings.

Plans and specifications can be seen at Room 748, Bourse Building, and copies of same, with blank forms for proposals, will be supplied to intending bidders upon deposit of $10 (cash or certified check) for each set of plans. Deposits will be refunded upon return of plans.

Bidders must be skilled and regularly engaged in the class of work bid for.

No bid will be considered unless accompanied by a certificate from the City Solicitor that a proposal bond in the sum of five hundred dollars ($500) has been filed, in accordance with the provisions of an ordinance approved May 25, 1860.

The Director reserves the right to reject any or all bids as he may deem best for the interest of the City of Philadelphia.

WM. S. TWINING, Director.

Bids received until July 6, 1917.

Laundry Building

West Haverstraw, N. Y.

Sealed proposals for Construction Work for Laundry Building at the New York State Hospital for the Care of Crippled and Deformed Children, West Haverstraw, N. Y., will be received by Mr. George Blagden, President, Board of Managers, New York State Hospital for the Care of Crippled and Deformed Children, West Haverstraw, N. Y., until three o'clock P.M., on Friday, July 6, 1917, when they will be publicly opened and read. Proposals shall be inclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a certified check in the sum of five per cent. (5%) of the amount of proposal. The contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent. (50%) of the amount of contract within thirty (30) days after official notice of award of contract and in accordance with the terms of Specification No. 2651. The right is reserved to reject any or all bids. Drawings and specifications may be consulted at the New York State Hospital for the Care of Crippled and Deformed Children, West Haverstraw, N. Y., at the New York Office of the Department of Architecture, Room 1224 Woolworth Building, and at the Department of Architecture, Capitol, Albany, N. Y. Drawings and specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon reasonable notice to and in the discretion of the State Architect, Lewis F. Pilcher, Capitol, Albany, N. Y.

Dated: June 12, 1917.

Pavement and Storm Water Sewers

St. Johnsville, N. Y.

Sealed proposals for the construction of about 12,000 square yards of bituminous pavement on concrete foundation and about 2000 feet of 18 and 20 inch storm water sewers on North Division and Centre streets, in the village of St. Johnsville, Montgomery county, New York, will be received by the Board of Trustees of the Village of St. Johnsville, N. Y., at the office of the Clerk of said Village, until four o'clock p. m., of July 6th, 1917.

Plans and profiles may be seen at the office of the clerk of the village of St. Johnsville, and plans and specifications may be obtained from the Engineer on deposit of $10.00, which will be returned on the return of the plans in good condition.

All bids must be accompanied by cash or a certified check, payable to the Treasurer of the Village of St. Johnsville, N. Y., for the amount of Four Thousand Dollars ($4,000.00). The above checks will be returned to the bidders immediately after the award of the contract, except the check of the successful bidder, which will be retained until the contract is executed and a bond satisfactory to the Board of Trustees of said village furnished having as a surety a surety company authorized to do business in the state of New York.

Bids will be received for the whole work only.

The Board of Trustees hereby reserve and have the right to accept or reject any proposal, to contract with other than the lowest bidder, or to reject all proposals and advertise again, as in its judgment may be for the best interests of the Village.

Dated June 18, 1917.

JAMES R. FLEEMAN, President.
EDWARD EVERETT,
DOUGLAS S. ACKERMAN, Trustees.
WILLARD L. BELLINGER,
FRED J. WALTAMATH.

PROPOSALS

Bids received until July 11, 1917.

Road Improvement

Mt. Holly, N. J.

Notice is hereby given that sealed bids will be received by the Board of Chosen Freeholders of Burlington County, N. J., for the improvement of the Jobstown Pike in the Townships of Northampton, Easthampton and Springfield in the County of Burlington with a sheet asphalt surface upon a present macadam foundation; estimated amount of surface pavement required is 31,896 square yards, and opened and read in public at the Court House, Mt. Holly, N. J., on July 11, 1917, at 11.30 A. M.

Drawings, specifications and forms of bid, contract and bond for the proposed work, prepared by James Logan, County Engineer, and approved by the State Highway Commission have been filed in the office of the said engineer at 11 Main street, Mt. Holly, N. J., and of said Commission at the State House, Trenton, N. J., and may be inspected by prospective bidders during business hours. Bidders will be furnished with a copy of the specifications and blue prints of the drawings by the engineer on proper notice and payment of cost of preparation. Bids must be made on the standard proposal forms in the manner designated therein and required in the specifications, must be enclosed in sealed envelopes, bearing the name and address of bidder on the outside, addressed to the Clerk of the Board of Chosen Freeholders and must be accompanied by a certified check or cash for not less than $1000.00 and be delivered at the place and on the hour above named. The standard proposal form is attached to the specifications, copies of which will be furnished on application to engineer.

By order of the Board.

HARRY HAWKINS, JR., Clerk.

Bids received until July 5, 1917.

Street Improvement

Tarrytown, N. Y.

Sealed proposals will be received by the Board of Trustees of the Village of Tarrytown, at the Corporation Rooms on Main Street, until 8 P. M. on Thursday, July 5th, 1917, for paving and otherwise improving Broadway in the Village of Tarrytown, a distance of Twelve thousand six hundred (12,600) feet involving about 53,629 square yards of pavement of which 9,896 square yards may be vitrified brick pavement and the remainder of approximately 43,733 square yards may be an asphaltic road surface on a concrete foundation or a concrete road surface as may be determined by the Village Board. All work to be done in strict accordance with the plans and specifications adopted by the Board of Trustees and on file with the Clerk of said Village.

The work to be done under the aforesaid specifications may be done under two contracts or may be combined into one contract as may be determined by said Board of Trustees.

Bids must be in writing, signed by the bidder and upon the blank form attached to and forming part of the specifications. Each bid must be accompanied by the sum of Five thousand dollars ($5000.00) in cash or certified check made payable to the Treasurer of the Village of Tarrytown, to be forfeited to the Village of Tarrytown as liquidated damages in case of failure on the part of the bidder to furnish satisfactory bonds and to enter into a contract if the work is awarded to him. Deposits of unsuccessful bidders will be returned as soon as the contract is awarded and the deposit of the successful bidder will be returned when the contract is signed and approved.

Contractors desiring to bid only on the asphaltic surface will be required to furnish a deposit of Two thousand five hundred dollars ($2,500).

No bids will be received after the time set. Plans may be inspected at the office of the Village Clerk or at the office of the Wulff Engineering Company, National Bank Building, Tarrytown, New York. Specifications and form of proposal may be obtained from the Village Clerk.

The Board of Trustees reserves the right to reject any or all proposals, or to accept whatever proposal may be, in its judgment, for the best interests of the Village.

Tarrytown, N. Y., June 19th, 1917.

J. WYCKOFF COLE, Village Clerk.

Bids received until July 11, 1917.

Road Improvement

Mt. Holly, N. J.

Notice is hereby given that sealed bids will be received by The Board of Chosen Freeholders of Burlington County, N. J., for the improvement of the Pemberton-Lewistown road in the Township of Pemberton in the County of Burlington with a concrete surface upon the present road bed, estimated amount of surface pavement required is 15,840 square yards, and opened and read in public at the Court House, Mt. Holly, N. J., on July 11, 1917, at 11.30 A. M.

"Drawings, specifications and forms of bid, contract and bond for the proposed work, prepared by James Logan, Burlington County, Engineer, and approved by the State Highway Commission have been filed in the office of the said engineer at No. 11 Main Street, Mt. Holly, N. J., of said Commission at the State House, Trenton, N. J., and may be inspected by prospective bidders during business hours. Bidders will be furnished with a copy of the specifications and blue prints of the drawings by the engineer on proper notice and payment of cost of preparation. Bids must be made on the standard proposal forms in the manner designated therein and required by the specifications, must be enclosed in sealed envelopes, bearing the name and address of bidder on the outside, addressed to the Clerk of the Board of Chosen Freeholders and must be accompanied by a certified check or cash for not less than $1000.00 and be delivered at the place and on the hour above named. The standard proposal form is attached to the specifications, copies of which will be furnished on application to engineer.

By order of the board.

HARRY HAWKINS, JR., Clerk.

Dredging Work

Hanna, Ill.

Sealed proposals will be received by the Commissioners of the Lower Green River Special Drainage District in the County of Henry and State of Illinois, until the 16th day of July, 1917, and until 10 o'clock A. M. of said day at which time the bids will be publicly opened and considered at the residence of Benjamin Snodgrass, located on the Northwest Quarter of Section Nine in the Town of Hanna, Henry County, Illinois. The work for which bids are desired consists of dredging one main ditch, one lateral and making some fills, requiring the removal of approximately 489,723 cu. yds. of material. Plans and specifications for the work may be seen at the residence of either of the Commissioners or at the office of the engineers or attorney and from whom the same may be procured. All bids should be upon the form provided for that purpose and should be mailed or delivered to one of the Commissioners. The right is reserved to accept or reject any and all bids.

June 16th, 1917.

BENJAMIN SNODGRASS,
R.R. No. 2, Geneseo, Ill.
ARTHUR DAVIS,
R.R. No. 2, Geneseo, Ill.
CLARENCE PAYNE,
R.R. No. 2, Geneseo, Ill.
Commissioners in and for said Drainage District.

H. E. REEVES, Engineer,
U. S. Engineer's Office,
Leclaire, Iowa.
C. C. MARTIN, Engineer,
Geneseo, Illinois.
HENRY WATERMAN, Attorney,
Geneseo, Illinois.

Bids received until July 16, 1917.

Material and Labor for Sidewalk Construction

Media, Penn.

Sealed proposals will be received at the office of the County Controller at Media, Delaware County, Pa., on Monday, July 16th, 1917, at 10 A. M. for furnishing material and labor necessary to place concrete sidewalks on Seventh Street bridge, Chester, Pa.

Plans and specifications may be obtained by applying at the County Commissioners' office, Media, Pa.

A certified check not less than Ten per cent. (10%) of the amount must accompany the proposal.

The Commissioners reserve the right to reject any or all proposals.

ORION L. DAVIS,
County Controller.

Builders of Wooden Floating Docks

Tenders are solicited for floating docks of 350 feet length. Full specifications on reply to "Quick delivery." CL93—Eng. News-Record.

PROPOSALS

Bids received until July 12, 1917.

Refrigeration Equipment

Thiells, N. Y.

Sealed proposals for Refrigeration Equipment for Storehouse, Bakery, Refrigerating Plant and Cold Storage Building at Letchworth Village, Thiells, N. Y., will be received by Mr. Frank A. Vanderlip, President of the Board of Managers of Letchworth Village, No. 7 Wall Street, New York City, until twelve o'clock noon, on Thursday, July 12, 1917, when they will be publicly opened and read. Proposals shall be inclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a certified check in the sum of five per cent. (5%) of the amount of proposal. The contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent. (50%) of the amount of contract within thirty (30) days after official notice of award of contract and in accordance with the terms of Specification No. 2514. The right is reserved to reject any or all bids. Drawings and specifications may be consulted at Letchworth Village, Thiells, N. Y., at the office of the Board of Managers, No. 7 Wall Street, New York City, at the New York Office of the Department of Architecture, Room 1224 Woolworth Building, and at the Department of Architecture, Capitol, Albany, N. Y. Drawings and specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon reasonable notice to and in the discretion of the State Architect, Lewis F. Pilcher, Capitol, Albany, N. Y.

Dated: June 11, 1917.

Bids received until July 17, 1917.

Concrete Dam

New Brunswick, N. J.

Sealed proposals will be received by the Board of Commissioners of the City of New Brunswick at the Commissioners' Council Chambers, District Court Room, Court House Building, Paterson Street, New Brunswick, N. J., on Tuesday, July 17th, 1917, at 10 A. M., for the erection and construction of a concrete arched dam crossing Weston's Mill Pond near the Pumping Station, in the City of New Brunswick, N. J.

All of said bids shall be in accordance with the plans and specifications on file in the office of Asher Atkinson, City Engineer, City Hall Building, 78 Bayard Street, New Brunswick, N. J., and from whom copies of said plans and specifications may be obtained, upon the payment of Ten Dollars ($10.00), which said sum of Ten dollars ($10.00) is to be refunded upon the return of said plans and specifications to the City Engineer, in good condition.

Each bid must be accompanied by a certified check for One thousand dollars ($1,000.00), made payable unconditionally to the Treasurer of the City of New Brunswick, which check must be presented with the bid as a guarantee that the bidder will within five days after receiving the award

PROPOSALS

enter into contract for the faithful performance of the work, and will also provide a Surety Company bond to be approved by the City Attorney, in the amount of one-half of the amount of the bid, for the faithful performance of the work.

The Commissioners reserve the right to reject any and all bids.

EDWARD F. FARRINGTON,
Director Department Public Affairs.
ASHER ATKINSON, City Engineer.
Attest:
EUGENE J. McLAUGHLIN, City Clerk.

Bids received until July 19, 1917.

Earth Excavation

Greenville, Miss.

Open bids for the construction of about 4,700,000 cubic yards of earth excavation for drainage channels (Contracts Numbers 1 to 10 inclusive) according to the plans and specifications of the engineers, will be received at Greenville, Mississippi, July 19, 1917, at 10 a.m. by the Board of Commissioners of Black Bayou Drainage District, Washington County, Mississippi. Any sealed bids received will be opened and considered after the open bidding is concluded.

Bids will be accepted for the work as a whole, or for any contract or combination of contracts into which the work has been divided.

The right is reserved to reject any or all bids, and to waive any informality in the bids received.

No bid will be considered unless accompanied by a satisfactory corporate proposal bond, following the form furnished by the District, or by a certified check for not less than five per cent. of the amount of the bid, but in no case need a certified check exceed $10,000.

The bidder, or bidders, to whom awards are made, will be required to enter into written contracts with the Commissioners of the District, with good and approved security for the full amount of the contract within 20 days after being notified of the acceptance of his proposal.

Payments for the work will be made in cash.

BOARD OF COMMISSIONERS,

Road Construction

Trenton, N. J.

Notice is hereby given that sealed bids will be received by the Mercer county board of chosen freeholders for the construction of the River road, section 3, in the township of Hopewell, in the county of Mercer, with a bituminous concrete surface upon a macadam foundation (estimated amount of surface pavement required is 2,874 square yards; of foundation, 2,874 square yards), and opened and read in public at the court house, Trenton, N. J., on July 3, 1917, at 2:30 p.m.

Drawings, specifications and forms of bid, contract and bond for the proposed work, prepared by Harry F. Harris, engineer, and approved by the state commission of public roads, have been filed in the office of the said engineer, at the court house, Trenton, N. J., and of said commission, at the state house, Trenton, N. J., and may be inspected by prospective bidders during business hours. Bidders will be furnished with a copy of the specifications and blue prints of the drawings by the engineer on proper notice and payment of cost of preparation. Bids must be made on the standard proposal forms in the manner designated therein and required by the specifications; must be enclosed in sealed envelopes, bearing the name and address of bidder on the outside, addressed to the board of chosen freeholders of Mercer county, and must be accompanied by a certified check or cash for not less than $1,000, and be delivered at the place and on the hour above named. The standard proposal form is attached to the specifications, copies of which will be furnished on application to the engineer.

By order of board of chosen freeholders of the county of Mercer.

FRANK McCULLOUGH, Clerk.

Bids received until July 5, 1917.

Concrete Paving

Mount Penn, Pa.

Sealed proposals will be received by the Council of the Borough of Mount Penn, Pa., until Thursday evening, July 5th, 1917, at 7.00 o'clock P.M., for 6,000 square yards, more or less, of either plain or reinforced concrete paving, the work to be done on Perkiomen Avenue, west of 23rd Street; 23rd Street, north of Perkiomen Avenue; Carsonia Avenue and Friedensburg Avenue, according to specifications which may be procured from William H. Dechant & Son, Civil Engineers, Baer Building, Reading, Pa. Bids are desired both on the square yard basis and on the basis of cost plus per cent.

At the same time and place, sealed proposals will be received for 3,500 square yards, more or less, of Topeka or sheet asphalt paving to be placed on Perkiomen Avenue, east of 23rd Street, and on 23rd Street, north of Perkiomen Avenue, according to plans and specifications which may be procured from William H. Dechant & Son, Civil Engineers, Baer Building, Reading, Pa.

Council reserves the right to reject any or all bids.

GEO. C. HARTLINE, Borough Secretary,
Mount Penn, Pa.

OFFICE OF THE COMMISSIONERS, District of Columbia, June 25, 1917.—Sealed proposals will be received at the office of the Secretary of the Board of Commissioners, Room 509, District Building, until 2 o'clock P. READ THE
Searchlight Section
EVERY WEEK

The For Sale pages are a weekly "Bargain Sale"—the biggest to be found anywhere, because the News-Record publishes more ads of this kind than can be found in any other journal.

Every issue contains offers of equipment by which contractors can save a lot of money. It is a habit counting for economy to look over the For Sale pages every week whether or not a contractor intends to buy anything at the moment. This keeps him in touch with what is available—and where—when he must buy.

Keep an eye on the Want columns at the same time. They afford an easy means of marketing equipment for which one concern may have no further use, but which may be just what another concern wants.

Altogether the Want and For Sale pages of the Engineering News-Record form an "Opportunity Department" that hardly anybody in the engineering-contracting field can pass by without losing money.

ENGINEERING NEWS-RECORD
10th Ave. at 36th St., New York

DO YOU NEED A CIVIL ENGINEER?

The advertiser is a graduate of one of this country's leading technical universities. He is an associate member of the Am. Soc. C. E. He has had fourteen years' experience in designing, estimating and supervising all kinds of municipal and railroad construction, and constructing work.

He is now connected with a large contracting firm as assistant engineer.

He will consider a position in contracting or civil engineering line in which his knowledge, initiative and executive ability can be utilized to advantage. Place as Chief Engineer for firm of contractors preferred. He does not wish to make a change from his present position unless the place has substantial responsibilities and remuneration in accordance with them.

Present location, N. Y., but will arrange for an interview anywhere within a thousand miles, provided you are really interested in securing a man having the above qualifications.

Address—Advertiser, Room 1408, 11 Pine St., New York

and details furnished on contract basis; all work guaranteed. "Engineering," 2339 North 21st St., Philadelphia, Penn.

Wanted at Once

for immediate shipment, any quantity of battery lead plates, sediment scrap copper and wire, brass and all other grades of scrap material. Write to us today for our prices. National Metal and Rubber Co., 31 India Wharf, Boston, Mass.

Engineering News, Vols. 72, 74, 75

wanted. Write Observer Printing House, Charlotte, N. C.

FOR SALE

Steel Stacks and Guy Wires

On account of enlarging our power plant and the building of a large brick stack we have for sale two steel stacks, collars and guy wires; one stack 150 ft. high, 54 in. diameter, one stack 105 ft. high, 48 in. diameter; delivery about July 1st; stacks can be examined at our works. Apply Western Felt Works, 4115-33 Ogden Ave., Chicago.

Derricks For Sale

TWO 20-35 ton capacity sectional steel guy derricks; 105 foot mast and 95 foot boom. 1¼ inch steel guys, 2 inch turn buckles, $2500 each. Overland Construction Company, New York Life Building, Chicago, Ill.

AN OPPORTUNITY EXISTS

for an active business man, preferably with technical training, with about $45,000 capital to

Purchase Controlling Interest

in long-established corporation in the Metropolitan district engaged in a manufacturing engineering business. Replies stating age, moral and business recommendations should be in detail and will be treated confidentially. Reason for this opportunity the death of an active member of the Company.

PO669—Eng. News-Record

Any one interested in

Crushed Stone—

think we have a proposition that will be time well spent in giving same a thorough investigation.

We have located on the B. & A. R. R., one-half distance between Pittsfield and Springfield, immense piles of clean pieces of granite, suitable to put into crusher. These piles have been accumulating for over thirty years.

Will give this material free of charge and would consider taking part interest with responsible parties.

Hudson & Chester Granite Co.

Second Hand Equipment

HOISTS

2—Thomas Elevator Co., S.D. double cage Mine Hoists, 50 in. drums, 24 grooves 1¼ cable, direct geared to 82 H.P. G. E. slip ring motor, 220 or 440 Volts, 3 ph., 60 cy., 514 rev.

A. C. UNITS

2—100 K.W. G. E. Curtis Turbo Units, any voltage, 3 ph., 60 cycles, 3600 rev., 1 cond. and 1 non-cond.
1—250 K.W. Westinghouse, 2300 Volt, 3 ph., 60 cycles, A.C. Generator, direct connected to 18 x 36 Corliss engine.

BOILERS

150 H.P. Heine, 160 lb.
225 H.P. Stirling, 150 lb.
2—250 Stirling, 140 lb., 2—420 H.P. Geary, 175 lb.

ENGINES—MOTORS—D.C. and A.C. UNITS.

HAROLD R. WILSON MACHINERY CO.
417 Pine Street, St. Louis, Mo.

Upright Boilers For Sale

One Manning Type Boiler, 180 H.P., 60 in. diameter Shell, 125 lb. W. P.
One Straight Shell Boiler, 150 H.P., 72-in. diameter x 13 ft. 6 in. high, 125 lb. W. P.

Boilers fitted with all castings and trimmings.

NEW ENGLAND IRON WORKS COMPANY
365 Summer St., Boston, Mass.

CRUSHERS AND BOILERS

1—No. 5 "Gates" style K gyratory
1—No. 4 "McCully" gyratory
1—No. 00 "Gates" style D gyratory
1—No. 15 "Champion" 11 x 22 in. jaw, with elevator, buckets and screen, mounted on wheels
1—9 x 15 in. "Fraser-Chalmers" jaw
1—No. 4 "Champion" 9 x 15 in. jaw, with elevator, buckets and screen, mounted on skids
1—No. 4 "Champion" 9 x 15 in. jaw, with elevator and screen mounted on wheels
1—No. 3 "Champion" 7½ x 13 in. jaw, with elevator and buckets mounted on goose neck truck
1—11 x 16 in. "Reliance" jaw on truck with elevator and buckets.
1—Set crushing rolls 25 x 16 in. "Mosser"

COMBINED BOILERS AND ENGINES

1—20 H.P. "Farquhar" on wheels
1—18 H.P. "Farquhar" on wheels

BOILERS

100 H.P. "Ames" Empire type
90 H.P. "Ames" locomotive
48 in. x 10 ft. "Nagle" vertical
49 in. x 8½ ft. "Erie City" vertical
48 in. x 7 ft. "O & S" vertical
36 in. x 8 ft. "International" vertical
36 in. x 5 ft. "O & S" vertical
30 in. x 7 ft. "Sotter Bros." vertical

Vertical

Two 12-hp. One 15-hp. One 20-hp.

Economic

One 80-hp. Erie City return - tubular Economic boiler on skids.

Return Tubular

Three 125-hp. One 100-hp.

United States Equipment Company

210 So. La Salle Street
Chicago

Private Equipment

2¼ miles 16-lb. portable 24-in. gauge track.
2 miles 20-lb. Koppel portable 24-in. gauge track.
2 locomotives.
1 direct-current generating unit.
3300 ft. 1-in. transmission plow steel rope.
1600 ft. 8-in. Heltzel concrete forms.
5 Maney scrapers, 1 yd.
1 Avery traction engine with roller attachment.
1 Monarch tandem steam roller, 5 ton.
1 Portable Case 20-H.P. engine.
1 National elevating grader.
1 Ransome paving mixer, 9 cu.ft.
1 Foote gasoline mixer, 10 cu.ft.
7 dump wagons, 1½ yd.
2 tractors (steam and gasoline).
6 Troy reversible spreaders, 4 yd.
5 Port Huron reversible steel spreaders, 6 yd.
114 Pieces Lackawanna sheet piling, 7-in. x 14-ft.

DANIEL B. STRALEY,
Crown Point, Ind.

Boiler and Engine For Sale

60 H.P. Boiler and 75 H.P. "Frost" Steam Engine. Boiler, Murry H. T. Type. Used but six months, complete with all fittings.

COUNTY SUPPLY CO.
Box 219 Sioux City, Ia.

Three Phase, 60 Cycle A. C.

First-Class Equipment and Immediate Shipment

This valuable combination is hard to find at the present time, and you should be one of the many who have taken advantage of it.

STEAM SHOVELS AND EXCAVATING MACHINERY

Quantity	Make	Description
1	Bucyrus	Model 70-C steam shovel, with 2¼ cu.yd. dipper No. 1327, built 1910, all overhauled and in first-class condition
1	Marion	Model 20 steam shovel with standard boom and 1¼ cu.yd. dipper, No. 1699, built 1907, all overhauled
1		Short tunnel boom and dipper arm with 1 cu.yd. dipper for above shovel, never used
1		Short tunnel boom and dipper arm, 1 c.y. dipper for above shovel
1	Atlantic	Steam shovel with 2¼ c.y. dipper, built 1910; Shop No. 41999
1	Bucyrus	Model 70-C steam shovel with 2¼ c.y. dipper No. 1685, complete and in good working condition

LOCOMOTIVES

13	Porter	36-in. gauge, saddle tank locomotives, 10 x 16, all overhauled and in good working order
1	Davenport	36-in. gauge, saddle tank locomotive, 11 x 16, all overhauled and in good working condition, Shop No. 833, built 1908

CARS

40		Standard gauge flat cars 60,000 capacity, some of them in first-class repair, will pass R. R. inspection, others good for private use, with slight defects, which will not pass R. R. inspection
225	H.S.Kerbaugh	36-in. gauge 4 c.y. 1-way dump cars, all overhauled
4	H.S.Kerbaugh	36-in. gauge 1.3 c.y. rotary dump cars (revolving heading cars), new

AIR COMPRESSORS AND RECEIVERS

1	Ingersoll-Rand	Class "A" compressor 24 x 24¼ x 30 in. Shop No. 2855, in present working condition
1		Set compressor plant fittings and piping
4	Ingersoll-Rand	Air receivers 54 in. x 12 ft., built 1911
1	Ingersoll-Rand	Air receiver 54 in. x 12 ft. built 1913 (all receivers as good as new)
2	Laidlaw-Dunn-Gordon	Air compressors 25 x 15 x 18, belt driven, without motors, Shop Nos. 21744-5, built about 1910, received new air end 1914, in very good working condition
1	Ingersoll-Rand	Class "A" compressor 24 x 24¼ x 30 in., Shop No. 6353, built about 1904
1	Ingersoll-Rand	After Cooler 57 in.

ENGINES

1	Fairbanks	Gas engine, 8 H.P., vertical, mounted on wheels, with 2 fly wheels and 2 pulleys, with gasolene tank and water tank, Shop No. 9471, in good repair
1	Nagle	Stationary engine, 8 x 12, Shop No. 11426
1	Nagle	Stationary engine, 10 x 12, Shop No. 2676
1	Woodbury-Booth	Stationary engine, 9 x 16, 35 H.P., no number, complete, in good repair
1	Woodbury-Booth	Stationary engine, 8 x 14, 30 H.P., no number, complete, in good repair
1	Brownell	Stationary engine, horizontal, 11 x 14, 52 H.P., built 1903, Shop No. 2522, complete, in first-class repair
1	Chandler-Taylor	Stationary engine, 11 x 15, 60 H.P., complete, Shop No. 5518
1	Russell	Stationary engine, automatic, 11 x 14, 65 H.P., complete, Shop No. 01273
2	Westinghouse	Stationary engines, automatic, 10 x 9, 65 H.P., Nos. 2688-89, complete in all parts, in strictly first-class repair
1	Mundy	Hoisting engine, 7 x 10, D.D., D.C., link reverse, skeleton, Shop No. 2160
2	Lambert	Hoisting engines, 7 x 10, D.D., D.C., skeleton, built 1900-01, Shop Nos. 1928-9 and 2544, in first-class repair
1	Lambert	Hoisting engine, 7 x 10, D.D., D.C., skeleton, Shop Nos. 2371-2 and 1990, in fair condition
1	Lidgerwood	Hoisting engine, 7 x 10, D.D., D.C., skeleton, built 1904, Shop No. 22812
3	Lidgerwood	Hoisting engines, 8½ x 10, D.D., D.C., skeleton, Shop Nos. 21868, 21861, 14669
2	Flory	Propelling engines, 8½ x 10, D.C., skeleton, Shop Nos. 4598 and 5477
1	Lidgerwood	Hoisting engine, 7 x 10, D.D., D.C., boiler mounted
1	Dake	Swinging engine No. 3½, single drum E-2
1	Barber	18 H.P. D.C. gas engine, not complete
2	Flory	Hoisting engines, 50 H.P., No. 372, spec. compound geared, fitted with link motion, D.C., S.D., 48 x 24 in., Shop Nos. 4524-5

ELECTRICAL PLANT AND EQUIPMENT

4	Ingersoll-Rand	Electric wagon rock drills, Nos. 14, 25, 26 and 27, operated by motors, 3 phase, 60 cycle, 220 volt,
17	Ingersoll-Rand	5F electric pulsator rock drills, with pulsator, controller and tripods, 5 H.P. motors, 3 phase 60 cycle, 220 volt
1	Buffalo	Triplex pump, 11 x 10 in., with 75 H.P. motor, 3 phase, 60 cycle, 220 volt
2	Buffalo	Triplex pumps, 5½ x 6 in., with Westinghouse 7½ H.P. motor, 3 phase, 60 cycle, 220 volt
1	Morris	Two stage service pump, 6-in. suction, 4-in. discharge, direct connected to G. E. 25 H.P. motor No. 425982, type I-2-25-1500-K 220 volt, 25 cycle
1	Morris	Ditto, with motor No. 145083
1	Morris	Vertical 3-in. centrifugal pump, direct connected to G. E. vertical 5 H.P. motor No. 425985, type I-2-5-A-1500, form K, speed full load 1450, amps. 14, volts 2200, cycles 25
1	Morris	Ditto, with motor No. 425986
2	Flory	Cableway engines, with 300 H.P. motors, 3 phase, 60 cycle, 440 volts, with 2½-in. main cables, 2000 ft. long, with carriage, fall block, head tower sheaves, fall rope carriers, top tower castings, but without hoisting or hauling lines
16	Flory	75 H.P. electric hoists, 2 drum, with 11 H.P. electric swinging winches, motors 3 phase, 60 cycle, 220 volt
2	Williamson	75 H.P. electric hoists, 2 drum, with 7½ H.P. electric swinging winches, motors 3 phase, 60 cycle, 220 volt
5	MaineElec.Co.	75 H.P. electric hoists, 2 drum, with 7½ H.P. electric swinging winches, motors 3 phase, 60 cycle, 220 volt
1	Flory	4 drum electric hoist with 22 H.P. motor, 3 phase, 60 cycle, 440 volt
1	Flory	2 drum electric hoist with 22 H.P. motor, 3 phase, 60 cycle, 440 volt
1	Sheppard	Monorail hoist No. 1949, capacity 4 tons, with twin trolley motors, Westinghouse No. 711802 and hoisting motor G. E. No. 294254, 3 phase, 60 cycle, 220 volt
3	Allis-Chalmers	100 K.V.A., 60 cycle, single phase transformers, primary 2200 volt, secondary 240-280 volt
4	Gen. Elec.	667 K.V.A., 60 cycle, single phase transformers, type W.C., form E.I., primary voltage 7633-22900-39600, Y connection, secondary voltage 2200 volts, each
1	Gen. Elec.	10 K.W. transformer, 60 cycles, volts 1100-2200-110-220
1	Gen. Elec.	Transformer, type H, 25-10 K.W., 2080-2300-110-115, for lighting and operating gen. set, Shop No. 82163

Valves For Sale

The City of Ironton offers for sale five 10-in. hydraulic valves—hub both ends, and four 14-in. check valves—hub both ends, all valves of Eddy Valve Co. manufacture and unused.

Address FRANK L. BIGGS,
Director Public Service, Ironton, Ohio

FOR SALE

USED DITCHING MACHINES

Sewer and Water Works Trenchers.
Drag Line Machines.
Machines for digging open ditches with sloping banks.

State dimensions and length of ditch, and whether wet or dry land work.

Very low price and immediate delivery.

Ask for Special Circular No. 102.

MUNICIPAL ENGINEERING AND CONTRACTING COMPANY
Railway Exchange Building., Chicago, Ill.

FOR SALE

We recently purchased the Cape May, Delaware Bay & Sewell's Point Railroad, Cape May, N. J., their entire road and equipment, and offer the following:

13 miles of 70-lb. relaying rail.
20 miles of trolley and feed copper wire, 2/0 and 4/0 plain

All the power house equipment consisting of one Hamilton Corliss Engine, 200 h.p., belted to Westinghouse Generator, 250 Kw., 575 volts, 435 amperes, 450 r.p.m.
2—Woodbury Engines, direct connected to Thresher generators, 500 volts, 180 amperes, 100 Kw., 245 r.p.m.
Switch Boards, Volt Meters, and Ammeters
Boiler Feed Pumps, Heaters, etc.
2—125 hp. Heine Water Tube Boilers
1—125 hp. Coatesville Return Tubular Boiler
All the Trolley Cars, Box Cars, Flat Cars, etc.

We will sell this road in its entirety as a running proposition or will dismantle and sell separately.

This "Awful Ridgway Stuff"

Will always be found at the top of the first right hand page at the end of the "Searchlight Section."

Right at the end of the Second Hand Stuff.

All the **"JOHNNY-ON-THE JOB"** engineers have gotten into the habit of turning to this **"HOOK 'ER TO THE BILER"** ad. just for the fun of seeing if it is "quite as bad as it was last week."

And it usually is.

For we consider it our duty as well as good business to wake the **"DEAD ONES"** to the importance of this Remarkable Freight Elevator for the Mill Owner who has steam available.

ABSOLUTE PERFECTION in freight elevators is a surprising and bold claim.

So tremendous that the **"DEAD ONES"** just laugh.

But here are just two points among many sufficient to arrest a ttention

1. **FOOL PROOF.** When the Ridgway elevator is overloaded instead of being over-strained and burning out a motor, **IT JUST WON'T GO.**

2. **RUNS WHEN ENGINE IS SHUT DOWN.** As the circus man says, this feature alone is worth the full price of admission.

Newton Never-Slip Form Clamps

Make form work cost less

Quickly adjustable and when once set they can't let go until set screw is released. Can be used over and over indefinitely.

One ordinary laborer putting on Newton Never-Slip Clamps can do the work formerly requiring two form carpenters.

Newton Improved Clamps stand the strain because they're *made* right. Every one is tested separately to insure ease in operation. The set screws are the best obtainable.

The V-shaped hole enables each Newton Clamp to fit rods of various sizes. We will furnish sketches showing how Newton Clamps may be used on your job.

Send for free samples.

The Newton Rod Puller removes rods without a bit of jar—saves the rods.

The Newton Tightener Wrench applies the nut and screw principle to threadless rods.

Push Business—Avoid Hysterics

WE never do things by halves. The President's ringing declaration against German aggression has met with a country-wide response. But we are in danger of going too far, of becoming hysterical. In our enthusiasm to do all we can to help win the war, we may be prompted to practice economies that would hurt rather than help.

Howard E. Coffin of the Council of National Defense who, perhaps more than any other American, is in a position to see the trend in industrial affairs sounds the note of warning.

It is repeated here because it is the belief of ENGINEERING NEWS-RECORD that every engineer and contractor should read *and heed*.

Mr. Coffin's Statement:

"After nearly three years of refusal to take the European war and its lesson seriously, we have suddenly launched forth in a most feverish activity to save the country over night," he said to-day. "Patriotic organizations, almost without number, are milling around noisily, and while intentions are good the results are often far from practical.

"Because of an impending and possible shortage of foodstuffs we have hysterical demands for economy in every line of human endeavor. **Waste is bad, but an undiscriminating economy is worse.**

"Some states and municipalities are stopping road building and other public works. General business is being slowed down because of the emotional response of the trading public to these misguided campaigns for economy; savings are being withdrawn from the banks; reports show that some people have begun to hoard food supplies and thousands of workers are being thrown needlessly out of employment. All this is wrong.

"Unemployment and closed factories brought about through fitful and ill-advised campaigns for public and private economy will prove a veritable foundation of quicksand for the serious work we have at hand.

KEYNOTE OF MESSAGE

"It is true that the President has said that this is a time to correct our habits of wastefulness," he said. "Certainly, but the keynote of his message to the people was this paragraph:

" 'It is evident to every thinking man that our industries on the farm, in the shipyards, in the mines, in the factories, must be made more prolific and more efficient.'

"We need prosperity in war time even more than when we are at peace. Business depressions are always bad, but doubly so when we have a fight on our hands. The declaration of war can have no real evil effect on business. What bad effects are apparent are purely psychological, and largely of our own foolish making. For our markets are the same in April that they were in March. We need more business, not less. There is real danger in hysteria. **Indiscriminate economy will be ruinous. Now is the time to open the throttle.**

"Every day the advisory commission of the Council of National Defense receives offers of service from business firms and individuals, with requests for immediate information as to how this service may best be rendered. Now and then great dissatisfaction with the governmental departments is expressed because instant advantage is not taken of such offers. Many firms are hestitating to close ordinary business contracts because of a desire to hold capacity open to meet possibly early government need.

"This spirit and this willingness to meet sacrifice, and even financial loss, in the government service is a most encouraging tribute to American patriotism. But we must remember that in the great struggle in which we have now become a part there is much to consider besides munitions, troops and battleships.

FEW CAN BE HEROES

"Few of us can serve in any heroic role, or even in the supply of munitions to the military arms of the service. It seems to me, therefore, that a plain statement of general policy is most desirable.

"Upon the industrial side of the war three great problems—or perhaps I should better say tasks—confront us.

"First and foremost, we must facilitate the flow of raw materials and finished products to our allies, and must provide the means of rail and water transportation therefor.

"Second, we must meet our own great military and naval building schedules.

"Third, we must plan to do all this with the least possible disarrangement to our own vast commercial and industrial machines.

"Through it all we must keep a close eye upon the possible conditions of peace following the present war. We must insure the business success and general prosperity of the country during the war, if we are to hold our present strong place among nations in the commercial competition of the future.

"Patriotic service does not of necessity mean the making of shells or the carrying of a musket over the shoulder. This would soon become a sorry sort of country if it did. There is no doubt of the willingness of any manufacturing plant or individual to serve should the call come. But until the call does come it is best to stick on the job. Let us make 'better business' our watchword and keep our factory fires burning."

New Railway Books

RAILWAY ESTIMATES

A new book by **F. Lavis**, Mem. Am. Soc. C. E., Am. R. Eng. Assoc., Special Lecturer on Railway Engineering, Yale University. 608 *pages*, 6 *x* 9, 99 *illustrations*, ***$5.00 net, postpaid.***

This volume covers the estimating of cost of proposed railways; valuation of existing lines; the design or modification of general railway features and the effect of such changes on the valuation or utility of the railway.

It provides facts upon which estimates of quantities and costs may be based, and it is a direct aid in solving the problems of location, structure, equipment, and traffic.

Other Railroad Books
by the same author

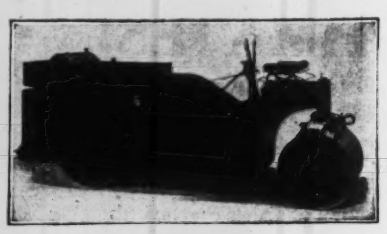
The First Motor Road Roller and Never Equaled in Economy



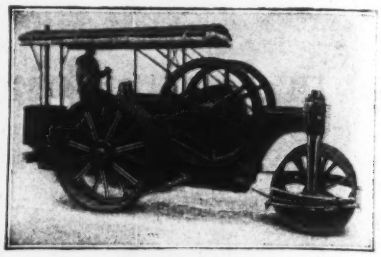
Tandem Roller

THE first to successfully introduce the internal combustion engine and the ability to do most work at least expense has made the Austin Motor Road Roller the standard in efficiency and economy.

Dispensing with the danger and annoyance of the smoke and fire of a steam roller, eliminating expensive hauling of coal and water, ease of control, and the ability to operate on either gasoline or kerosene are among the reasons for this superiority.

THE AUSTIN-WESTERN ROAD MACHINERY CO.
Chicago

Branch Offices—New York City, Columbus, O., Philadelphia, Atlanta, Dallas, San Francisco, Los Angeles, St. Paul.



Three Wheel Roller

Built in five three-wheel and four tandem sizes to meet every requirement. Write for complete catalog.

Greatest Experience is Embodied in the Construction of These Dump Wagons

The experience of nearly half a century in building earth moving machinery of practically every description is behind the Austin lines of dump wagons.

Longest use by most of the big contractors has demonstrated their efficiency, reliability and economy.

Austin dump wagons are characterized by their rugged, practically unbreakable construction. Steel channels filled with wood compose the side frames. The bottom boards are attached by chains which permit them to oscilate freely and prevent binding when dumping.

The top edges of the doors are strapped with iron making them sand tight.

Austin stone spreader wagons are indispensable in the construction of macadam roads. They spread to the full width of the rear wheels and the distribution of the stone is under perfect control of the driver from his seat.

Built in sizes for every contractor and municipal requirement.

Write for complete catalog of Austin dump wagons.

New Orleans, La. (Station B)

Creosoted cross arms, Lumber, Paving Blocks, Piles, Poles and Ties.
Private free wharf for ocean vessels at New Orleans.
Capacity 100 million feet board measure annually.

Plants at New Orleans, La., and Louisville, Miss.

WE CREOSOTE railroad ties, piles, poles and wood paving blocks in any quantity at our NEWARK, N. J., plant. We can make deliveries at the buyer's convenience, as we keep a large stock of untreated material on hand. Our prices will satisfy you. American Creosoting Company, 17 Battery Place, New York.

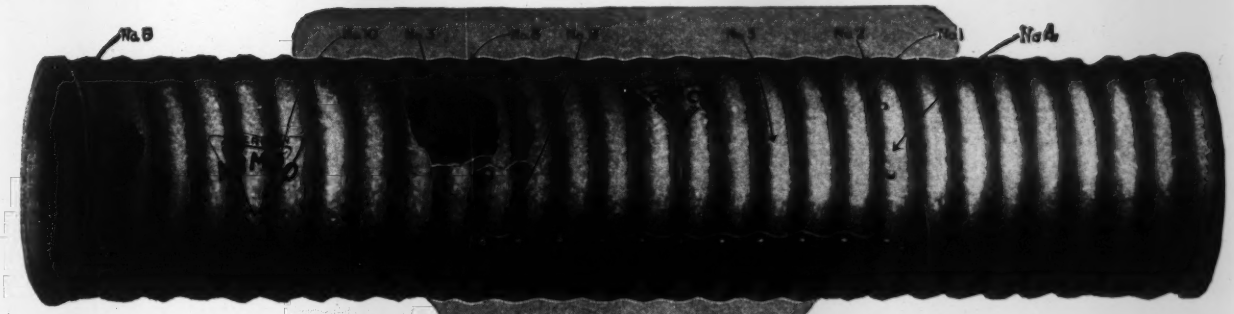
IMMEDIATE STOCK DELIVERIES

Avenarius CARBOLINEUM

PRESERVES WOOD EVERYWHERE

Simple methods—known costs—explained in new special circular—get it. Avenarius Carbolineum prevents decay of wood. Doubles life of timber. Costs 1/2 to 2c. per sq. ft.—$5 to $12 per 1,000 ft. B. M. Applied by brush, spray or open tank. 40 years' continuous service. Depots everywhere.

CARBOLINEUM WOOD PRESERVING CO
181 Franklin St. New York — 312 Prairie St. Milwaukee — 161 Front St. Portland, Or.



TEN REASONS WHY "ARMCO" IRON CULVERTS

1 **Solid Construction.** In the manufacture of "Armco" Iron Culverts the seams are *tightly* and *evenly* cinched. Before riveting sufficient power is applied to secure the ideal of closeness in each and every joint.

2 **Rivets are ample in size and number.** They are closely spaced and properly driven. They are made from the same metal as the pipe. Compare the riveting of "Armco" Iron pipe with that of ordinary material.

3 **The rivets are always properly upset**—never crushed between the plates. The inside of the pipe as well as the outside will bear the closest inspection.

4 **The pipe is straight and even.** The joints are not to be loosened by bending or swaying. Try the experiment of lifting one end of a sixteen or eighteen foot "ARMCO" Iron Culvert of small diameter and *jouncing* it up and down as hard as you can. You cannot loosen the joints or damage the pipe. This is one good test for corrugated pipe in general.

5 **"ARMCO" Iron Culverts carry the maximum quantity and quality of galvanizing.** This material has a great superiority over substitute metals in its ability to take a heavy coating of pure zinc, *and retain it under forming operations.* "ARMCO" Iron Culverts meet the United States Government specifications of two ounces of galvanizing to the square foot.

6 **Protection for the Culverts in shipping and installing and after they are placed in service is secured by the rodded end.** A heavy rod is rolled into the end sections. It gives ample reinforcement exactly where it is needed, and entirely does away with battered and bruised ends and the danger to stock from the exposed edges of unprotected corrugated pipe. This development also results in giving the culvert a finished and handsome appearance.

7 **Strong, convenient and lasting coupling devices** are provided where it is necessary to ship the pipe in more than one section to be joined in the field. This is an element not to be despised when considering long service under varied conditions.

8 **Toughness and resiliency** are qualities of thoroughly well made corrugated pipe. "Armco" Iron Culverts are capable of withstanding conditions caused by freezing and thawing or by settling and shifting foundations which are speedily fatal to many otherwise excellent constructions.

9 **Plates and rivets are always of gages and dimensions specified.** There is no skimping of metal. The Culverts are always of full gage *all the way through and not merely at the end sections.* The size of the pipe is that of the *net internal diameter,* and the length is that stated on the invoice. Put them on the scales and see whether they weigh what they should. That is a quicker and surer method than gaging, and is readily applicable to any culvert. *See that you get what you pay for.*

10 **Their material is "ARMCO" (American Ingot) Iron**—the *purest,* most *even* and most *durable* of all metals available for culvert use. The "Armco" Triangle Brand is everywhere a guarantee of quality. On corrugated culverts it indicates the recognized standard as to material and construction.

For full information on Rust-Resisting "Armco" Iron Culverts, Flumes, Siphons, Sheets, Roofing and formed Products, write the nearest manufacturer.

300 Feet of 6-ft. Diameter "ACME" (NESTABLE)

Corrugated NO-CO-RO METAL Culverts

Imagine these 300 feet of "ACME" Culverts shipped set-up in full circle. It would take *eight* gondolas, each with only a minimum load—extra freight per lineal foot for *somebody* to pay. And then, how *would* you unload from the cars and onto your wagon—and haul to the ditch, regardless of total weight and clumsiness, with roads good, bad or indifferent? A pretty tough job at the best, eh?

Then again: Picture these 300 feet of 6-ft. diameter "ACMES," nested—approximately 40,000 lbs. mind you, but shipped all in one box-car—packed one section within another—each section weighing 132 lbs.—easily handled by two men at the most—as many sections on your wagon as you thought a team ought to haul conveniently considering the roads—the simple procedure of assembling into full circle (with furnished bolts) on the site?

With these two layouts before you you can readily account for our big business in these large diameter Corrugated Culverts. And you can *profit*, also.

Security Sewer Rods

Security Rods are made from second-growth hickory, with malleable iron couplings swedged or shrunk down very tightly on to the curved places at end of sticks. Security couplings *cannot* come off.

Joint and unjoint easily and quickly—light weight—long runs easily made. No slack but lend themselves to all practical bends.

They cannot buckle or uncouple in the duct.
Send for Flyer No. 18.

Largest Floating Plant
in the United States, for
Washing Sand and Gravel

Materials are dug from bed of Ohio River by a 3-yard orange-peel bucket and dropped into dewatering hoppers. Sand and gravel delivered to respective barges alongside.

A special plant designed to meet particular conditions. It delivers a clean graded product at a low cost.

75% of all the Sand and Gravel Washing Plants installed in the United States within the last six years, have been designed and equipped by Dull Engineers. This fact is of great significance to the man contemplating the installation of a sand and gravel washing plant. It is an assurance that your plant will have the advantages of cumulative experience and improved equipment, in this specialized field, to insure its economical operation.

Write for a copy of "Plants for Washing Sand and Gravel."

The 6,000,000 bushel Calumet Elevator of the C. & N. W. R. R.

Used On Big Projects

Marsh-Capron Rail-Track Mixers are used on practically all the big construction work throughout the country. Recommended by engineers who have studied their simple, sturdy, wearproof construction. Demanded by contractors because they give

"Most Mixing — Least Fixing"

Write us for full particulars as to the proper equipment for producing most work at least expense. Our Engineering Department will gladly send you full details free upon request. Wire at our expense if you need prompt attention.

Building Mixers

Marsh-Capron Rail-Track Mixers are built in four sizes, and are furnished with steam, gasoline or electric power, with charging spout, batch hopper or pivoted side loader, in combination with hoists—in fact we furnish the machine which will give you greatest output and most profit.

MEMBER OF NATIONAL ASSOCIATION MIXER MFRS

Paving Mixers

Marsh-Capron Pavers have all the advantages of the **Rail Track Mixers**, and more. Made in four sizes—from the largest paving mixer built to a one-bag machine. They may be had with end or side loaders. Can be used on large jobs in connection with industrial cars, with great success.

MARSH-CAPRON MFG. CO., 1475 Lumber Exchange, **CHICAGO**

4 Savings of the SPRACO Paint Gun

3—Time

If you've ever watched a painter or a group of painters in their efforts to give a structure or a piece of equipment a uniform coating—

You'll appreciate the speed of the Spraco Paint Gun and its happy faculty of *shooting* a smooth even coating free from brush marks—and with no spattering or splashing of the paint.

It's a big time saver in coating a hollow or inaccessible surface, too—

As you will learn from the booklet we will be glad to send you.

CUBE MIXING

the most perfect Mixing that Mixer service knows

THE FULL BATCH TURN-OVER BUCKET

designed by "Austin Engineering" to give

SPEED together with *PERFECT CONCRETE*

When concrete is poured into the bucket, the grout comes to the top—when emptied by turning over the grout is on the bottom—when tamped, the grout is forced up through the aggregate—and then you're certain to have a solid slab of concrete (there can't be any honeycombs).

The turn-over principle in operation insures *perfect concrete*, and the full batch adds *speed*.

The renewable drum plates insure long life.

We desire to give the contractor best possible delivery service, but to do so we require your co-operation—please let us know your needs well in advance.

Write today for Catalog No. 3 of the complete line of Austin-Cube Mixers.

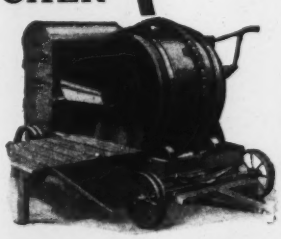
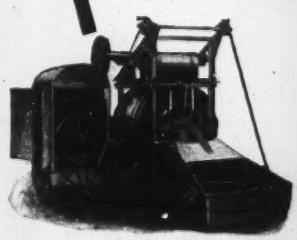
KNICKERBOCKER

Built for SATISFACTORY SERVICE —Gives It



In building for the need of the user for years, we have eliminated the user's troubles. For instance—to keep the user from pounding the loader, we build the mixing drum large enough to permit a large opening on charging side. This lets us make our loader very much wider at the discharge end than is found on any other mixer. That is what makes fast charging.



Other features, such as tracks that do not flatten—slop guards on both sides of the drum and fast discharging are explained in our catalog.

We build Mixers in twenty styles and sizes, also Mortar Mixers and Saw Rigs.

The Knickerbocker Company
400 Liberty Street, Jackson, Mich.

SPEED

The job was paving one of the busiest streets of Cincinnati. The street had to be reopened for traffic in the shortest possible time and the pavement had to be placed without any interruption to car traffic (about 45 cars were passing hourly).

The Kirschner Construction Co., contractors, had to have a mixer that worked fast, that was easily handled, and that was compact enough to use in the narrow space between the curb and the car tracks.

They chose an Ideal Cincinnatus No. 14 Batch Mixer and in spite of all obstacles averaged 150 cu.yds. daily (8 hours).

We make a complete line of reliable Paving Mixers and sell them at reasonable prices. Write for catalog.

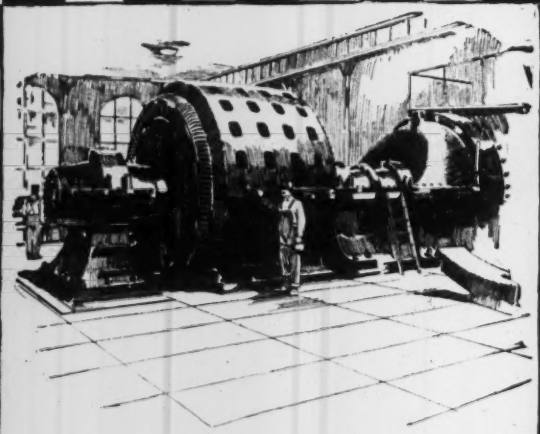
Guaranteed to mix mortar as well as better concrete.



What Do Your Floors Cost?

WE don't ask what they are *worth*—we ask how much they cost you in lost time, cost of maintenance and damaged machinery.

Perhaps it has never occurred to you that unprotected cement floors may be the cause of your machinery trouble. Perhaps you never realized that the fine, gritty dust from the floors is what makes your bearings run hot and your dynamos and motors to spark.

R.I.W. (REMEMBER IT'S WATERPROOF) **CEMENT FILLER & CEMENT FLOOR PAINT**
REG. U.S. PAT. OFF. PATENTED AS TO PORTLAND CEMENT POSITION

will make your floors durable, dustless and cheaper to maintain. Oil, water, and acids cannot soak into and soften the cement because the surface is scientifically sealed.

Floors treated with R.I.W. Cement Filler and Cement Floor Paint will not crack or disintegrate, and will give longer, cheaper and more satisfactory service all around.

They are specified by experts the world over.

Write for descriptive literature, Dept. R.

Run of sash in Johnson & Johnson Bldg., New Brunswick, N. J., operated by our Rocker Shaft Type of operating apparatus.

L & B Apparatus Operates the Sash in Johnson & Johnson War Addition

Johnson & Johnson, manufacturing chemists, at New Brunswick, N. J., found themselves deluged with War orders. Found it necessary to add *three stories* to one of their large buildings. All sash in the addition are operated by L. & B. apparatus. Our deliveries notched right up to their rapid fire constructing pace.

The sash operating apparatus shown above, is on the third story of the addition.

It is of our Rocker Shaft Type. Operates 8 sash from each gear. Gear is placed in center of each run and worked by a hand chain. The sashes are hinged at the bottom and open *inward*. They can be operated with ease and held ricid at any angle. Simple. Durable. Dependable.

We have an apparatus among our three distinct types to solve *your* problem.

Send for Catalog.

For

The engineer—civil, mechanical, electrical, mining, the metallurgist, the chemist, the contractor, the surveyor, the accountant or executive in the industrial plant, public utilities corporation, county or railway offices.

Who uses the new Pony Marchant Calculator

Right along, in your office, weeks of work are being summed up, and thousands of dollars spent, on some ultimate figure. Is that figure correct? *It is correct if you used a Marchant Calculating Machine.*

Learn what this has meant in actual practice, what the many Marchant Calculating Machines in use today have done. **They have saved errors and time, paid for themselves over and over again.**

The new facility for RAPID figuring—addition, subtraction, division, multiplication, single and combined, prorating, taxes, discounts, costs—with ABSOLUTE ACCURACY, that the new Pony Marchant gives, will surprise and delight you.

Our special Bulletin H for Engineering and In Industrial Service, gives the facts. Send for it.

Marchant Calculating Machine Co., Oakland, Calif.

This Means You

Mr. Contractor Mr. Architect

How are YOU going to protect the soffits of your steel structures from fire or corrosion in the best manner?

Read This:

Standardized Metal Caging positively "locks the concrete to the steel." It possesses none of the disadvantages of individual clips, which float or become bent; longitudinal rods that block the flow of the concrete or the nsufficient key at the corner which fabrics with large meshes commonly give. We have a complete stock and can fill large orders immediately.

Drop us a postcard for full information.

Here you see how S. M. C. clutches the steel.

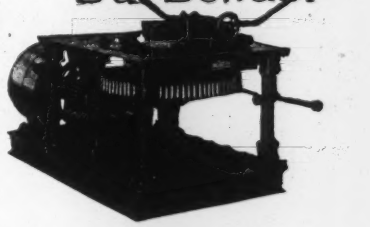
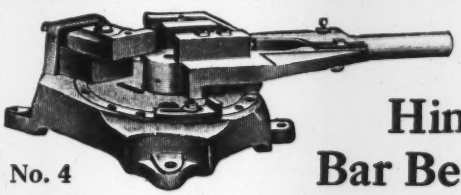
Bend Bars Yourself—Save Time and Money

McKenna Power Bar Bender



Rods up to 1¼ in. diameter.
Vise arrangement keeps rods in alignment when making more than one bend in a rod.
Cast steel wearing parts. Any style power drive.
Write for price and data.

THE McKENNA CO., 1851 East 38th St. Cleveland, O.



It's a

Hinman Bar Bender

No. 4

This size (No. 4) has greater range for heavy work than any other bender on the market. It will bend cold stock up to and including 1¼ in. round, square or twisted bars. Also flats. Right angles of any desirable radius in one operation. Also hooks, U's and stirrups.

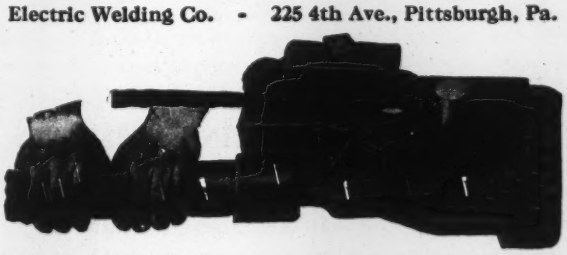
Several sizes and styles. Send for circular describing the full line.

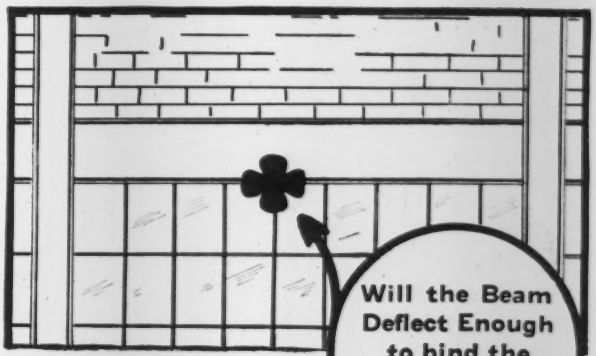
D. A. HINMAN & CO., 27 Main St., Sandwich, Ill.

The EFFICIENCY Bar Bender

A portable tool that can be kept in an ordinary tool box. It will bend any size bar to any angle—plain, round, square, twisted or deformed. It's very simple in construction, as you see; and Common Labor can operate it. It's the ONLY bender on the market that will bend *hooks on rods* in one operation. The LOW price will surprise you.

Electric Welding Co. - 225 4th Ave., Pittsburgh, Pa.





The beam has been designed—it carries a uniform load of 10,600 lbs. It has a 16-ft. span and is 10 x 15 in. (depth to steel) in section-reinforcement—4¾-in. rods. Will it deflect enough to bind the sash?

$$D = \frac{.000434 \times 10600 \times 192^3 \times 76}{1{,}000{,}000 \times 10 \times 15^3}$$

The Engineer could solve this problem in 55 seconds and have proof of accuracy on a

MONROE

CALCULATING-ADDING MACHINE

The Monroe Calculating Machine is being used by the large engineering corporations on concrete, steel, earthwork and hydraulic computations—on payroll, estimate and cost work.

Monroe simplicity and ease of operation—simply a forward turn for Addition and Multiplication and the reverse operation for Subtraction and Division, with a visible proof of accuracy at every step—reduce the most complicated calculation to an easy and accurate machine process.

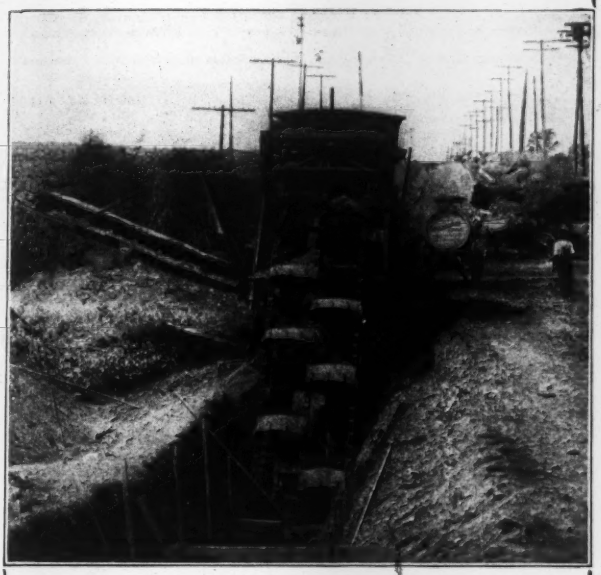
Special apparatus built to order

MINNEAPOLIS DIGS LARGE WATER MAIN TRENCHES WITH AN "AUSTIN

Digging a trench 20 ft. 0 in. deep, 72 in. wide, for 54 in. force main—the municipally-owned "Austin" maintained over a long period a very low cost of excavation.



This large "Austin" digs trenches up to 72 inches wide—adjustable side cutters furnished with all "Austins" enable each machine to dig trenches of various widths.

It's the exceptional ability of the "Austin" to dig constantly, under all conditions, that insures a low unit cost per yard wherever an "Austin" is put to work—Austin machines have proven their ability to dig successfully in any soil.

The superb Austin Multipedal Traction enables the machine to work on many days when other machines are compelled to remain idle—"Austin" quality construction is insurance against loss due to breakdowns. The use of belt permits of applying tremendous power, at the same time protecting the machinery and engine when digging shocks are encountered.

Single Closing Sheave Orange Peel Dredging and Excavating Bucket

The construction of this bucket is most substantial, being made of homogeneous steel plate of 60,000 pounds tensile strain. Bearings are steel bushed, removable and easily replaced.

The four blades which form the main body of bucket are made extra heavy, with the points reinforced and welded, insuring well-hardened points for penetration.

The lower casting on crosshead is made of cast steel, and likewise the top casting which receives the arms. The arms are made of heavy forged iron and steel bushed.

All sizes in stock for immediate shipment. We build buckets of all types.

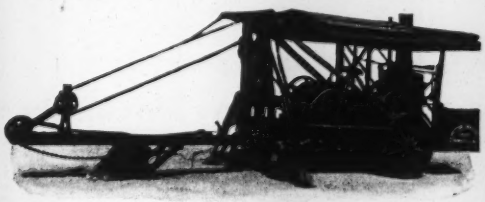
KEYSTONE

Road Grader
Bank Dipper
Ditcher
Cellar Digger
Back Filler

5 in 1

Don't buy 40 tons of equipment if one *Keystone* 10-ton Traction Shovel will take care of all your work.



THE machine is sturdily built and will stand up, too, but it is unusually light, and will move about hard digging in cement gravel or old macadam; rapidly on its own power without danger of going through country bridges and culverts. Skimmer and Dipper Scoops hold one-half yard. Loads 1½ yard wagon in 1½ minutes. Average daily output 250 to 400 cubic yards. Has dragline ditcher scoop for trenches, cellar digging, back-filling, etc. Ditching capacity 150 to 300 cu.yd. per day. Excavates to a depth of 20 ft.

The eleven-foot horizontal crowding movement and powerful thrust make it more efficient than other machines for shallow grading in hard material.

Saves you money in first cost, operating and moving charge, and upkeep.

Write nearest office for catalog, prices and list of near-by owners.

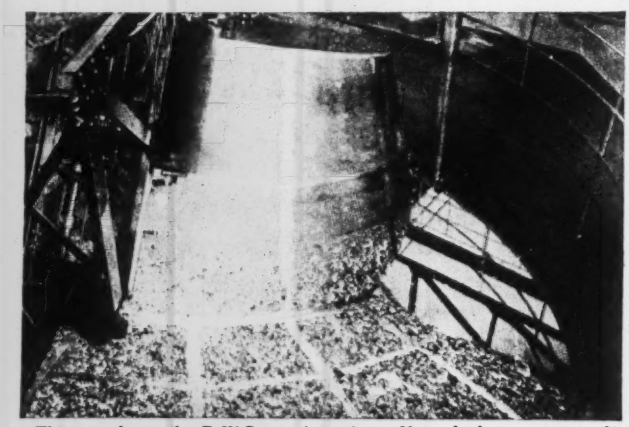
Without offense, to locate the plant in the middle of a city—



This cut shows the R-W Screen in action. Note the large amount of screenings brought up from the sewage. These are removed above sewage level by revolving brushes. Write for bulletin.

ANSWER:

The Sanitation R-W Process

A single small house can contain the R-W Screen and revolving brushes that constitute the mechanism of this process. And the *results?* The screen revolves, bring up *fresh* sewage—non-disintegrated solids—which are promptly swept off for disposal, as desired. Daytona, Florida, solved this very problem in this manner.

Full data promptly—write for Bulletin.

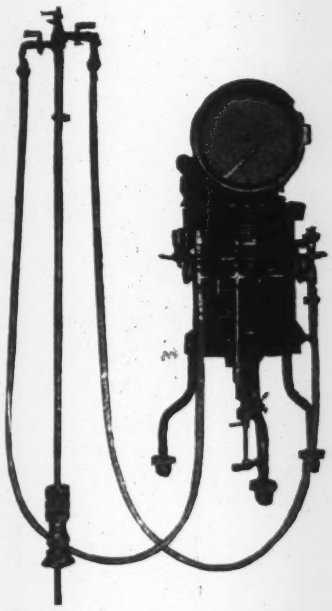
Mr. Manager, What About Your Water Waste?



Pitot Tube Waste Detector

You cannot be sure that everything has been done to eliminate preventable water waste without a comprehensible survey of the losses in your plant and distribution system.

Leading water works have decreased their losses from 10 to 30 per cent. by the use of the

SIMPLEX WASTE DETECTOR

This simple, portable instrument operates in conjunction with Pitot tube, which can be inserted at strategic points to measure the leakage losses in the various sections of the piping system.

Flows down to one-half a foot per second are accurately recorded.

Ask us to send Bulletins

"You fellows give too much for the money"

That's the report our Chicago representative forwards from the Superintendent of a Water Department that, for the past several years, has had an installation of

"W & T" Chlorine Apparatus For Purifying Water

The original "W & T" Apparatus had given such satisfactory service since installation that this Superintendent would not consider changing to a more modern type. "W & T" Equipment gives longer service because it is designed and built *by experts in the control of chlorine.* It is made of materials that will last. We *could* make a chlorinator that would run for a few months without using silver, platinum, tungsten, monel metal, etc.—but we'd only sell you *once.* No one who has ever purchased a "W & T" equipment has ever purchased any other make subsequently. **Write for Technical Publication No. 1R.**

AS AN EXAMPLE OF UNDIVIDED RESPONSIBILITY

The motor driving this pump set is just large enough to prevent overloading and at the same time operate the pumps at the lowest cost per gallon.

It is possible for the Allis-Chalmers Company to furnish perfectly balanced units of this kind because we build both the pumps and the motors or turbines used to drive the pumps and have accurate performance data for both the pumps and drives. For this reason we have been able to adapt our standard pumps to many unusual services such as the bottle washing set illustrated above. Our pump Bulletin No. 1632 AR which we will send free on request describes our complete line of pumps and illustrates many other applications.

ALLIS-CHALMERS MANUFACTURING CO.

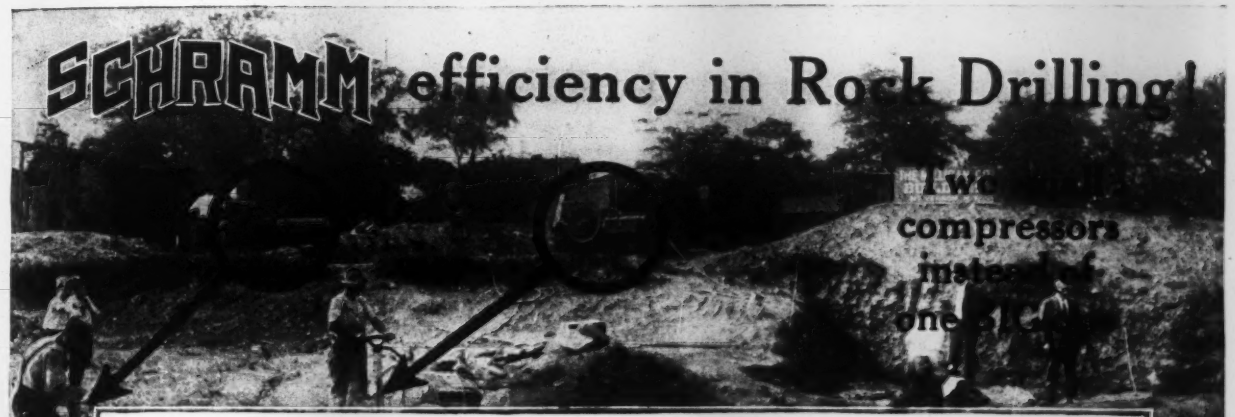
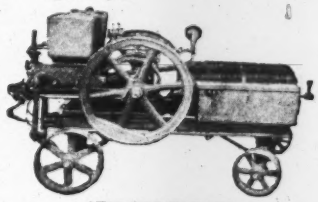
SCHRAMM efficiency in Rock Drilling!



Six reasons—all profit-making

The Schramm Air Compressor is

(1) Light weight—*portable*.
(2) Rigid during operation (low center of gravity.)
(3) Built as a *unit* (no power losses thru belts, gears or chains.)
(4) Economical on gasoline.
(5) Available for *straight power purposes* when not used for air.
(6) Backed by a *free trial* proposition. Write us. Get details of our offer. Ask for Catalog and information regarding our other equipments—pumps, hoists, etc. VISIT OUR NEW YORK CITY OR PHILADELPHIA SHOW ROOM.



IT'S PORTABLE!

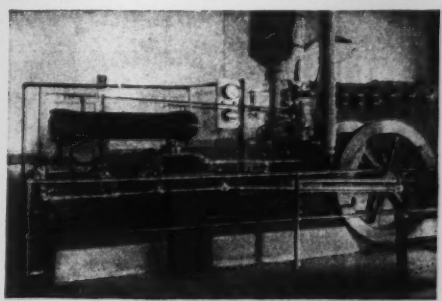
New York Show Room: 140 West Street
Philadelphia Show Room: 310 North Fourth Street

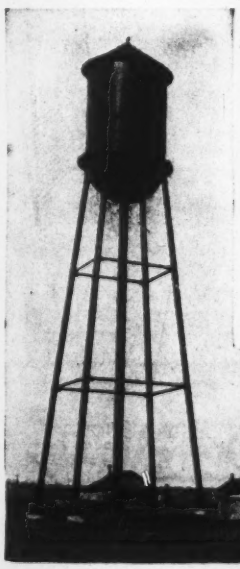
SULLIVAN WATER SUPPLY SYSTEMS

spell economy and improved service for municipalities that take their water from wells.

THE SULLIVAN AIR LIFT

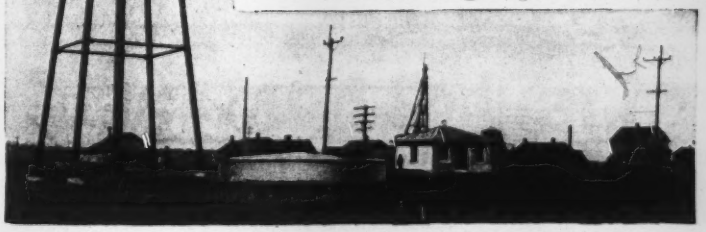


Sullivan Air Lift Installation, Municipal Water Works, Buhl, Minnesota. The air lift raises the water into a reservoir, from which it is forced into the standpipe or the mains by centrifugal pumps. The compressor is a Sullivan "WB2" two-stage machine.



secures:

1. **More water** from the same wells than by other means.
2. **Cooler water,** which means a saving in horse-power in condensing.
3. **Purer and "softer"** water, due to aeration.
4. **Greater simplicity** and reliability. There are no moving parts in the well.
5. **The apparatus** is always in working order; not affected by mud or sand.
6. **Efficiency** kept up to original point at all times and after long use.
7. **A scattered group of wells** can be pumped as readily as one well.



Ask for new Air Lift Bulletin No. 471-C

Sullivan Machinery Co.

30 Church St. NEW YORK

You Men Who Use "Jackhamers?"

Are you giving your drill runners all the sharp steel they need? Sharp steel and plenty of it means more work.

The "Leyner Jacksteel Sharpener"

has been built especially to meet the needs of "Jackhamer" users.

It not only forms and resharpens perfect bits rapidly but also shanks the steel.

It represents a very moderate investment, making its installation profitable to every steady operator of two or more drills.

It is compact and light and therefore easily portable.

Bulletin 4037 tells the details.

Oxy-Acetylene Welding and Cutting

These links of a heavy chain belt were cut undersize. New metal was added at corners by Prest-O-Lite Process to make them required size.

Heavy Chain Belt Links Saved by Welding

Engineers and contractors in every line of construction work are daily up against problems of correcting unfortunate last-minute mistakes similar to the one shown above. By simply adding new metal to the corners of these improperly cut links, they were saved from the scrap pile—to say nothing of the saving of time required to make new links.

The usefulness of oxy-acetylene welding is not confined to solving problems like this. It will help you avoid annoying delays and expensive replacements when busy equipment breaks by repairing and putting back into service the broken or worn part which can be made good as new, sometimes at trifling cost.

Prest-O-Lite PROCESS

Employs both gases (acetylene and oxygen) in portable cylinders. Prest-O-Lite Dissolved Acetylene (ready-made carbide gas) is backed by Prest-O-Lite Service, which insures prompt exchange of full cylinders for empty ones. Provides dry, purified gas, insuring better welds, quicker work, and lower cost, and also avoids the large initial outlay and heavy depreciation incurred in making crude acetylene in a carbide generator.

Necessary equipment is not expensive. We furnish high-grade welding apparatus for $75 (Canada $100); acetylene service at additional cost. Adaptable for oxy-acetylene cutting by the addition of special cutting blow-pipe. Thorough instructions are furnished free to every user of Prest-O-Lite Dissolved Acetylene—any average workman who understands metals can learn the process quickly and easily.

Write for illustrated literature and data, showing the classes of work others are now doing and how readily you can effect equal savings.

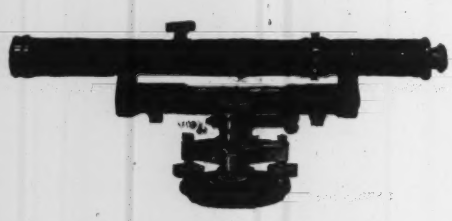
K & E Engineering Instruments

TRANSITS, LEVELS, TAPES, RODS



are the recognized standard in all branches of the Engineering Profession. The excellence of their design and construction insures accuracy and reliability under all conditions of use.

Our catalog, also a copy of our Solar Ephemeris for 1917, *sent free on request.*

KEUFFEL & ESSER Co.

NEW YORK, 127 Fulton St. General Office and Factories, HOBOKEN, N. J.

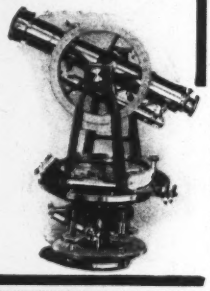
CHICAGO 86-90 S. Dearborn St. | ST. LOUIS 817 Locust St. | SAN FRANCISCO 18-50 Second St. | MONTREAL 5 Notre Dame St. W.

Drawing Materials • Mathematical and Surveying Instruments • Measuring Tapes

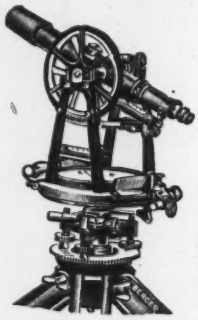
Save 15% to 50%

on your engineering instruments by purchasing a BECKMANN. Nothing cheap about the instruments but the price. Efficient manufacturing methods make our low prices possible. A 40-year reputation as makers of the highest grade instruments is too valuable to risk by putting out low-quality instruments. You won't find them here.

Illustrated is our Reconnoissance Transit. Especially recommended for rapid and preliminary surveying work where a light, portable instrument is needed. Price only $110. **Ask for our new complete catalog.**



The L. Beckmann Co.
700 Jackson St., Toledo, O.
Established 1874



Berger
TRANSITS AND LEVELS

Originality

BERGER Instruments offer you a range of choice which is particularly wide for Engineering and Surveying purposes.

KOLESCH

Engineers' Improved Transit

Designed throughout to give the most accurate results.
Retains its Fine Adjustment under all conditions.
The best for field and definition.
Send today for Bulletin and full particulars.

KOLESCH & COMPANY
138 Fulton St., N. Y.

No. 2020

GIVES LINES AND LEVELS—ACCURATELY—QUICKLY

Accuracy is the keynote in the construction of this improved convertible level. ACCURACY AND DURABILITY ARE BUILT RIGHT INTO IT. You can line up your foundation piers, plumb girders and examine walls in course of construction, ACCURATELY, QUICKLY and with complete confidence that your results will be error-proof. Let us send you one of these moderate-priced levels for free 10 days' trial; no obligation. Ask for circular and trial offer.

David White Co., Inc.

Directory of Engineers

New England

Adams, H. S.,
Civil Engineer.
Wharf and Dock Construction. River and Harbor Works.
Boston, Mass., 108-9 Ames Bldg.

Barbour, F. A.,
M.Am.Soc C.E. M.Can.Soc.C.E.
Consulting Engineer.
Water Supply, Water Purification, Sewerage and Sewage Disposal.
Boston, Mass., Tremont Bldg.

Barrows, H. K.,
M.Am. Soc.C.E.
Consulting Hydraulic Engineer.
Water Power, Water Supply, Sewerage, Drainage. Investigations, Reports, Valuations, Designs, Supervision of Construction
Boston, Mass., 6 Beacon St.

Fay, Spofford & Thorndike
Consulting Engineers.
Frederic H. Fay, Charles M. Spofford, Sturgis H. Thorndike.
Boston, Mass., 308 Boylston St.

Macdonald, James H.,
Consulting Road and Pavement Expert.
State Highway Commissioner of Connecticut nearly eighteen years. Advice given on all phases of road building and street paving.
Consultations on specifications, materials and methods. Specialty of recommending efficient and economical equipment and plant. Accurate estimates for contractors.
New Haven, Conn., Chamber of Commerce Bldg.

Stone & Webster
Industrial Plants and Buildings
Steam Power Stations
Sub Stations
Water Power Developments
Transmission Lines
Electric Railways
Gas Plants
New York Boston Chicago

Gray, Samuel M.,
Consulting Engineer
Municipal and Sanitary Work. Room 933 Grosvenor Building.
Providence, R. I., 10 Weybosset Street.

Main, Charles T.,
M.Am.Soc.M.E.
Plans and Specifications for Textile Mills and other Industrial Plants, Water Power and Steam Power Development. Examinations and Reports on Plants with reference to their Value. Reorganization or Development.
Boston, Mass., 201 Devonshire Street.

Weston & Sampson
R.S.Weston. G.A.Sampson.
Water Supply, Water Purification, Sewerage, Disposal of Sewage, Municipal and Factory Wastes. Operation of Purification Plants and Sanitary Analyses.
Boston, Mass., 14 Beacon St.

New Jersey and New York

Field, Wm. P.,
Civil Engineer.
Foundations, Roofs, Bridges, Steel Structures, Buildings, Railways, Railway Structures, Water Works.
Newark, N. J., Prudential Bldg.

Hill, William R.,
M.Am.Soc.C.E.
Consulting Engineer.
Water Works, Steam Railroads and Canals.
Albany, N. Y., 562 Broadway

Hopkins, Charles C.,
M.Am. Soc.C.E.
Consulting Civil and Sanitary Engineer
Water Supply, Sewerage, Wastes Disposal, Water Power, etc. Plans, Reports, Estimates, Supervision, Valuations.
Rochester, N. Y., 349 Cutler Bld.

Horton, Robert E.,
Consulting Hydraulic Engineer.
Investigations, Reports, Design and Supervision of Construction for Water Power and Water Supply Developments. Specialist in Hydrology and Critical Reports on Adequacy and Safety of Water Supply and Structures for Power, Public Use and Irrigation.
Albany, N. Y., 57 North Pine Ave.

Knight & Son., C. W.,
Hydraulic and Sanitary Engineers
Plans, Estimates, Reports, Supervision. Water Supply, Water Power, Water and Sewage Purification and Land Drainage.
Rome, N. Y.

Perry, Charles E.,
Consulting Engineer.
Water Supply, Sewerage, Treatment of Water and Sewage.
Associate, George E. Willcomb.
Albany, N. Y., 82 State St.

Pfeiffer, George Jr.,
Constructing Engineer.
Specializes in underground water supplies only, own methods used, big results, can give many references; 30 years practical experience. Iron Removal System, an inexpensive method for freeing artesian well water from iron, carbonic acid (free) and other obnoxious impurities, no chemicals used. Write for information.
Camden, N. J., 209 Market St.

Vrooman, Morrell,
Sewerage, Water Supply, Power. Treatment of Industrial Wastes.
Gloversville, N.Y., 10 N. Main St.

Wells, James P.,
Consulting Engineer.
Water Power, Water Supply, Flood Control. Specialist in Stream Flow Investigation.
Rochester, N. Y., 344-345 Cutler Bldg.

New York City

Alta Engineering Corporation
(James H. Strain, Pres.)
Preliminary Investigation and Estimates, Surveys and Plans for Destructors for Disposal of City Wastes.
New York City, 50 Hudson Terminal.

Barstow & Co., W. S., Inc.,
Consulting and Construction Engineers.
Public Utilities operated and financed. Appraisals, Reports.
New York, 50 Pine Street.

Bowe, Thomas F.,
Consulting Engineer.
Water, Sewerage, Disposal of Sewage. Municipal Engineering. Valuations, Reports, Inspection.
New York, 95 William St., Rutherford, N. J., Assoc. Bldg.

Brown, Thomas E.,
M.Am.Inst., Cons. Engrs. M.Am.Soc.C.E., M.A.I.M.E.
Consulting Engineer.
Hydraulics, Hoisting Problems, Mountain Railways. Steel Structures and Movable Bridges.
Brown Bascule Bridge.
New York City, 18 E. 41st St.

City-Wastes Disposal Co.,
(Organized from Staff of Col. Geo. E. Waring, Jr.)
Consulting Engineers.
Specialists in Drainage, Sewerage and Sewage Disposal.
Preliminary Investigations and Estimates, Surveys, Plans and Supervision.
Sanitary Examinations and Reports.
New York, 45 Seventh Ave.

Concrete-Steel Engineering Co.
Designing and Supervising Engineers
Concrete-Steel Bridges
New York, Park Row Bldg.

Cooper & Co., Hugh L.,
General Hydraulic Engineering.
Including the design, financing construction and management of hydro-electric power plants.
New York City, 101 Park Ave.

Desmond, T. C. & Co., Inc.,
Engineers and Contractors.
Design, Reports, Financing, Construction.
New York City, 110 W. 34th St.

Dow & Smith,
A. W. Dow, Ph. B., M. Am. Inst. Ch. Engrs.
F. P. Smith, Ph. B., M. Am. Soc. C. E.,
Chemical Engineers, Consulting Paving Engineers
Asphalt, Bitumens, Paving, Hydraulic Cements, Engineering Materials.
New York, N. Y., 131-3 East 23rd Street.

Ford, Bacon & Davis,
Engineers.
New York, 115 Broadway.
New Orleans, San Francisco.

Fuertes, James H.,
M.Am.Soc.C.E.
Civil and Sanitary Engineer.
Water Supply and Water Purification, Sewerage and Sewage Disposal.
New York, 140 Nassau St.

Directory of Engineers

Durham, Henry Welles,

Civil Engineer.
Design and Supervision of street paving, highways and municipal work. Reports and specifications.
New York, 366 Fifth Avenue.

Fuller & McClintock,

George W. Fuller,
J. R. McClintock, J. K. Giesey.

Consulting Hydraulic Engineers and Sanitary Experts.

Water Supply and Purification, Sewerage and Drainage, Disposal of Sewage and Refuse, Investigations of Epidemics, Public Utility Valuations, Supervision of Construction and Operation.

New York City, 170 Broadway.

Goldmark, Henry and Goldmark, C. J.,

Consulting Engineers. Canal and Railway Structures, Industrial Works, Mechanical and Electrical Installations. New York, 103 Park Ave. Kingston, Can.

Greene, Carleton, C. E.,

M. Am. Soc. C. E.
Consulting Engineer.
Wharves, Piers, Freight Handling Machinery, Canal Transportation.
New York, 11 Broadway.

Gregory, John H.,

Consulting Hydraulic Engineer and Sanitary Expert.
Water Supply and Water Purification. Sewerage, Sewage Disposal and Garbage and Refuse Disposal.
New York City, 170 Broadway.

Harding, James C.,

Consulting Engineer and Sanitary Expert.

Water Supply and Purification, Refuse Disposal, Sewerage and Sewage Disposal. Investigations of Epidemics. Water Works Valuations. Supervision of Construction and Operation.

New York City, 170 Broadway.

Hazen, Whipple & Fuller,

Allen Hazen, G. C. Whipple, F. F. Longley, W. E. Fuller, C. M. Everett, L. N. Babbitt, H. Malcolm Pirnie

Consulting, Hydraulic and Sanitary Engineers.

Water Supply, Sewerage, Drainage, Valuations, Supervision of Construction and Operation.

New York City, 30 E 42nd St.

Hering, Rudolph, D. Sc.

Consulting Engineer

Water Supply, Sewage and Refuse Disposal.

Over 40 years active practice in United States and Canada.

170 Broadway, New York City

Hill, Nicholas S., Jr., and Ferguson, S. F.,

Consulting Engineers.

Water Supply and Sewage Disposal. Evaluations and Reports. Laboratory for Analysis of Water and Sewage and for Testing Cement, Sands, Coal and Metals. Steam and Hydraulic Power Plants.

New York, 100 William Street.

Johnson, George A.,

M.Am.Soc.C.E.
Consulting Hydraulic Engineer and Sanitary Expert.
Water Supply and Purification. Sewerage and Sewage Disposal.
New York, 150 Nassau Street.

Johnson, Nathan C.,

Consulting Concrete Engineer.

Specializing in: Causes of Disintegration of Concretes—Repair of Defective Concrete Constructions—Production of High Grade Concretes—Examinations—Reports—Design.

New York City, Suite 2313 Singer Bldg.

Walter Kidde & Company

Incorporated

Engineers and Constructors

Inspections	Industrial Plants
Reports	Wharfs and Piers
Design	Power Plants
Construction	Chemical Works

New York City, 140 Cedar Street

Lederle & Provost,

Sanitary Experts and Hydraulic Engineers.
Water Supply. Sewage Purification. Lederle Laboratories Associated.
New York City, 39-41 West 38th Street.

Mead, Daniel W., Scheidenhelm, F. W.,

Consulting Engineers. Hydraulic and Electric Developments, Water Supply, Reclamation Works and Flood Control. New York City, Equitable Bldg., 120 Broadway

Meyer, Henry C., Jr.,

M.E. *Consulting Engineer.*
For Power Plants and the Heating and Ventilation of Buildings.
New York City, 101 Park Ave.

Moran, Daniel E.

M.Am.Soc.C.E., M.Am.Soc.M.E.

Reuben Davis, C.E.
C.F. Maurice, C.E.

Consulting Engineer.

Foundations for Dams, Bridges, Buildings, and Underwater Work

New York City, 55 Liberty St.

Moisseiff, Leon S.,

M.Am.Soc.C.E.
Engineering Construction and Investigations.
Bridges and Structures. Steel and Concrete.
New York, 69 Wall Street.

Mueser, William

Consulting Engineer
Concrete-Steel Bridges
Concrete-Steel Standpipes
New York, Park Row Bldg.

Parsons, H. de B.,

Consulting Engineer.
Hydraulic and Steam Developments, Industrial Plants, Municipal Engineering, Water Supply, Sewerage. Opinions—Reports—Appraisals.
New York City, 22 William St.

Pollock & Taber,

Mems. Am. Soc. C. E.
Consulting Engineers. Pavements, Highways, Water Supply, Drainage, Sewerage & Sewage Disposal Designs, Specifications & Supervision. C.D. Pollock, G. A. Taber.
New York City, Park Row Bldg.

Potter, Alexander,

Consulting Engineer.
Hydraulics Sanitation, Concrete Structures. Tel. 5501 Cortlandt.
New York, 50 Church Street.

Potts, Clyde,

M.Am.Soc.C.E.
Civil and Consulting Engineer.
Water Supply, Power; Sewerage and Sewage Disposal.
New York City, 30 Church St.

Robinson & Wagner,

Experts in Sewage Disposal.

New York, 37-39 East 28th St.

Sanderson & Porter,

Engineers.

New York, 52 William Street, Chicago, 72 West Adams Street; San Francisco, Nevada Bank Bldg.

Sothman Corporation, The,

Consulting and Constructing Engineers.
Power Development, Transmission, Water Works, Etc.
New York, 40 Exchange Place. Montreal, Transportation Bldg.

Taylor, Henry W.,

Consulting Engineer.
Water, Sewerage, Trade Wastes, Pumping Plants, Hydraulic Power, Reports, Designs, and Construction.
New York City, 26 Cortlandt St. Albany, N. Y., 100 State St.

Tribus & Massa,

Consultation, Design, Supervision, Management, Appraisal.
Water, Sewage, Refuse, Power, Pavements.
New York, 86 Warren Street.

Wallace & Co., Joseph H.,

Consulting Industrial Engineers.
Industrial and Power Plants. Hydraulic Developments — Investigations — Consultation — Reports.
New York City, Montreal,

Waring, Chapman & Farquhar,

Sanitary Engineering. Sewerage, Sewage Disposal, Drainage, etc.
New York, N. Y., 875 Broadway

White Companies, The J. G.,

Engineers—Contractors
Managers—Financiers.

New York City, 43 Exchange Pl.
Chicago, London.

Young, C. G.,

Engineering and Construction
Plans, Methods, Operation. Reports and Financing. American and Foreign Experience. Valuations.
New York, 14 Wall Street.

Pennsylvania, Ohio and W. Virginia

Albright & Mebus,

Civil and Sanitary Engineers.
Sewerage, Sewage Disposal, Town Planning.
Philadelphia, Pa., 908 Land Title Building.

Burgess, Philip,

M.Am.Soc.C.E. M.Am.W.W.Assoc.
Hydraulic and Sanitary Engineer.
Design, Construction, Operation, Appraisements.
Columbus, Ohio., 826-829, S. E. Long Street.

Cleveland Dock Engineering Co., The,

Design, Supervision, Consultation.

Harbor Improvement, Docks, Piers, Wharves.

Cleveland, Ohio, Citizens Bldg.

Chester & Fleming,

Hydraulic, Sanitary and Mechanical Engineers.

Pittsburgh, Pa., Union Bank Building.

Collins, Charles E.,

M.Am.Soc.C.E.
Consulting Engineer.
Water Supply, Water Power, Sewerage and Sewage Disposal, Supervision of Construction and Operation, Valuations.
Philadelphia, Pa., Drexel Bldg.

Directory of Engineers

Duff, Samuel E.,
Consulting, Designing and Supervising Engineer.
Appraisals, Reports
Pittsburgh, Pa., Empire Bldg.

Ellms & Miller,
Consulting Engineers.
Civil, Hydraulic and Sanitary.
Cincinnati, Ohio, 2807 Union Central Building.

Fayette Engineering Co.,
Civil, Mining and Consulting Engineers.
L. C. Mechling, E. L. Zearley.
Coal, Coke Plants.
Uniontown, Pa.

Gannett, Seelye & Fleming,
Farley Gannett, Theodore E. Seelye, Samuel W. Fleming, Jr., Associated with the Harrisburg Water Laboratories.
Consulting Engineers.
Civil —Hydraulic —Sanitary — Electrical. Investigations — Valuations —Reports.
Practice before State Departments.
Harrisburg, Pa., 204 Locust St.

Kennedy, Julian,
Engineer.
Pittsburgh, Pa., U. S. A.
Cable Address: "Engineer, Pittsburgh."

Knowles, Morris M.Am. Soc.C.E.
M.Am.Inst.Cons.Engr.
Town Planning and Municipal Engineering. Water Supply and Purification. Sewerage and Sewage Disposal. Investigations, Reports and Designs.
Pittsburgh, Penna.

Ledoux, J. W.,
Consulting Engineer.
Water Works, Hydraulics, Reports and Valuation.
Philadelphia, 112 No. Broad St

Moore, W. E. & Company,
Engineers
Reports, Designs, Supervision Public Service Properties. Power Developments, Distribution and Applications.

Topographic Surveys, Water Supply, Sewerage, Sewage Disposal. Development of Country Estates.
Washington, D. C., 2418-14th Street, N. W.

Markley, S. Chester,
Consulting Sanitary Engineer.
Water Supply and Purification, Sewer Systems, Disposal of Sewage, Reports, Pitot Tests, Valuations and Investigations of Epidemics.
Roanoke, Va., Terry Building.

Morgan Engineering Companies, The,
Hydraulic Engineers.
Flood Prevention — Irrigation—Drainage—Power Development.
Memphis, Dayton,

Shearer, C. E., Established March 1910
Report, Design, Detail, Inspect
Concrete, Timber and Steel, Foundations, Bridges, Buildings, Power and Industrial Plants, River and Rail Terminals.
Memphis, Tennessee, U. S. A.
Main Street at Beale Avenue

Canada

Robinson, A. W.,
M.Am.Soc.C.E. M.Am.Soc.M.E.
Mechanical Engineer. Dredging Machinery of Every Type Designed for Special Conditions.
Montreal, Can. 14 Phillips Sq.

Pacific States

Beckman & Linden Engineering Corporation,
J. W. Beckman. H. E. Linden.
Investigations and Reports on Hydro-electric Developments and Power Utilization for Electrochemical and other industries. Financing and Management.
San Francisco, Cal., 604 Balboa Building.

Falkenburg and Laucks
Consulting Inspecting Analytical Engineers and Chemists
Representatives in all Pacific Coast Cities and Eastern Manufacturing Centers
Seattle, Wash.

Grunsky, C. E.,
Consulting Engineer.
Valuations, Municipal Engineering, Irrigation & Flood Control.
President of American Eng'r'g Corp., Cons. & Superv. Engrs.
San Francisco, Calif, Mechanics Institute Building.

Stevens, J. C.,
M.Am.Soc.C.E.
Hydraulic Engineer.
Irrigation, Drainage, Water Power.
Reports and Valuations.
Portland, Oregon, Spalding Bldg.

Inspecting and Testing Engineers

American Bureau of Inspection and Tests, The,
Consulting and Inspecting Engineers.
Operating at principal Railway Equipment, Cement and Steel Manufacturing Plants.
Chicago, Monadnock Block.

Electrical Testing Laboratories, Electrical, Photometrical and Physical Tests. Inspection and Tests of Electrical and Engineering Materials. Main Office and Laboratories, New York, 80th St., and East End Ave.

Gulick-Henderson Co.,
Inspecting Engineers, Chemists Metallurgists.
Inspection of Bridges, Building Materials, Railway Equipment, Cement, Pipe, Machinery, etc.
Pittsburgh New York Chicago

Hildreth & Company,
Consulting and Inspecting Engineers.
Philadelphia, Pittsburgh, Chicago, New York, 15 Mills Bldg., Broad Street.

Hill, Nicholas S., Jr., Ferguson, S. F.,
Consulting Engineers.
Water Supply and Sewage Disposal. Sanitary Inspections. Laboratory for Testing Water, Sewage, Cement, Sand, Coal, Oil, Paints and all Water-Works Supplies.
New York City, 100 William St.

Hunt, Robert W. & Co.
Robert W. Hunt, Jno. J. Cone, J. C. Hallsted, D. W. McNaugher
Bureau of Inspection, Tests and Consultation.
Chicago, New York, Pittsburgh, St. Louis, San Francisco, Seattle, Montreal, London.

Pittsburgh Testing Laboratory
Engineers and Chemists.
Inspection of Rails, Cars, Bridges and Buildings; Pipe, Boilers, Engines, etc.; Cement Testing and Inspection at Mills before Shipment. Road Materials and Paving. Chemical and Physical Tests. Consultation and Reports.
Pittsburgh, "P. T. L." Building; New York, Philadelphia, Boston, Chicago, San Francisco, St. Louis, Cincinnati, Birmingham, Dallas, Cleveland, Minneapolis, Buffalo.

Underwriters' Laboratories,
Incorporated 1901
Established and maintained by the National Board of Fire Underwriters. For service—not profit. W. H. Merrill, President. Reports on Devices, Systems and Materials having a bearing upon Fire Hazards or Accident Prevention.
Principal Office and Testing Station, Chicago, 207 E. Ohio St. New York Office and Testing Station, 25 City Hall Place. Branch Offices throughout the United States and Canada.

Jones Co., Morgan T.,
Inspecting Engineers.
Bureau of Inspection, Tests and Consultation. Inspection and Testing of all Railroad Materials, Cement, etc.
General Offices, Chicago, Monadnock Block.

Engineering Schools and Colleges

College of Engineering,

Courses in Civil, Mechanical, Electrical, Sanitary, Municipal, Chemical Engineering. Short course in Structural Drafting.

Enter any time. No matriculation or registration fees. Expenses ½ to ⅓ less than at other first-class schools. School year—Four quarters of 12 weeks each.

Length of Courses 120 Weeks. Save one year and $1000.

Experienced Instructors. Splendid Laboratories.

For catalog, bulletins or information address: Albert Edwin Smith, President, Ohio Northern University, Ada, Ohio.

Montana State School of Mines,

Located in a Great Mining District.

Thorough course of four years in Mining and Metallurgy equips young men for immediate service in Mine and Reduction Works.

For information address Registrar.

Butte, Montana.

Clarkson College of Technology,

Courses leading to the degrees of Bachelor of Science in Chemical, Civil, Electrical and Mechanical Engineering.

Catalog upon application.

Potsdam, N. Y.

New York University School of Applied Science,

Departments of Civil, Mechanical, Chemical, and Industrial Engineering.

For announcements or other information address Chas. Henry Snow, Dean.

N. Y. City, University Heights.

Norwich University,

(Founded 1819)

The Military College of Vermont. Academic Courses in Civil and Electrical Engineering. Address Prof. H. R. Roberts.

Northfield, Vermont.

Polytechnic Institute of Brooklyn,

College of Engineering.
Day and evening courses leading to the degrees of C.E., E.E., M.E. and B.S. in Chemistry; also graduate courses in science leading to the degree of Master of Science.

Fred. W. Atkinson, Ph. D., President.

Rensselaer Polytechnic Institute,

Engineering and Science.

Courses in Civil, Mechanical, Electrical and Chemical Engineering and General Science, leading to the degrees of Civil Engineer (C.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Ch.E.), and Bachelor of Science (B.S.). Graduate Courses leading to Masters' and Doctor's Degrees Also special courses. Unsurpassed new Chemical, Physical, Electrical, Mechanical and Materials Testing Laboratories.

A catalog sent upon application to the Registrar of the Institute, Troy, N. Y.

College of Engineering,

Northwestern University

Five years of broad, thorough training; small classes, in which each student receives individual attention from head professors.

Unsurpassed opportunities to see great engineering projects and meet engineers.

A young thriving College in an old University.

Write for "Best Preparation for Engineering" and "Booklet of Views."

John F. Hayford, Director

Evanston, Ill., Swift Hall.

Lafayette College,

Technical Courses in Chemical, Civil, Electrical, Mechanical and Mining Engineering. Write for illustrated catalogue to the Registrar. Easton, Pa.

Rose Polytechnic Instute

A College of Engineering Courses in Mechanical, Electrical, Civil, Chemical and Architectural Engineering. Extensive shops, well-equipped laboratories in all departments, expenses low. 34th year. For catalog containing full information and professional register of alumni,

Address K. L. Mees, President, Terre Haute, Indiana.

Sheffield Scientific School

Yale University. Civil, Mechanical, Sanitary, Electrical Eng'g; Chemistry, Pure and Applied; Mining-Metallurgy. General Scientific Studies. Languages.
Russell H. Chittenden, Director, New Haven, Conn.

University of Pennsylvania,

Towne Scientific School.
Courses in Mechanical, Electrical, Civil and Chemical Engineering, Architecture and Chemistry. Extensive modern laboratories with unsurpassed equipment.
John Frazer, Dean, Philadelphia.

College Cards

are available at nominal cost.

We count it a duty to the large and important field served by this paper to foster the announcements of colleges offering engineering instruction.

Is your card here?

Profitable Proposal Advertising

THE readers of ENGINEERING NEWS-RECORD are the active, progressive engineers and contractors of the civil engineering and contracting field. They look to this paper for information as to new projects and the development of established properties, from the time a bond issue or improvement is talked about until the work is completed.

Money can be saved by getting these men to figure on new work. Advertisements for bids published in ENGINEERING NEWS-RECORD secure maximum competition—the most bidding by the best bidders.

No work is too small, none too large, to be beyond the money-saving quality-insuring influence of NEWS-RECORD Proposal advertising. Cost is only $3.60 an inch.

Proposal ads invariably save large sums on contract prices.

Plans and specifications for work advertised in the Engineering News-Record may be filed without extra expense at our New York, Philadelphia, Chicago or San Francisco office for the convenience of prospective bidders.

Mr. Consulting and Operating Engineer

THE REASON WHY THE

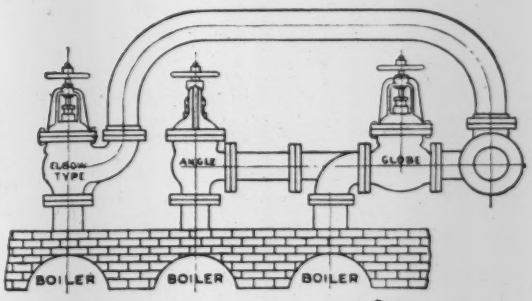
U. S. Steel Corporation Has Ordered 1350

Golden-Anderson Automatic Double-Cushioned Triple-Acting and Non-Return Valves

IS THAT THEY

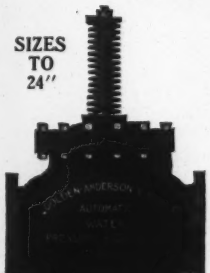
1st. Prevent expensive shut-downs.
2nd. Make back flow of steam impossible.
3rd. Equalize pressure between boilers, automatically—quickly pay for themselves in reduced coal bills alone.
4th. Absolutely protect men inside of "dead" boilers.
5th. Valves fitted with "Double Corliss" dashpots. Absolutely cushion valve—no hammering or sticking.
6th. Provide for every contingency by "automatic" testing in service feature—valves closed from floor or remote points.
7th. Heaviest and most correct mechanically-constructed and operated automatic valves made.

Vitally Important. "Automatic" Test Feature Valves may be closed or tested any time. Insures positive safety.



"Hosts of References"

SIZES TO 24"



Automatic-Cushioned Water Pressure Reducing Valves

Reduce Automatically, High Pressure to Positive Low Pressure

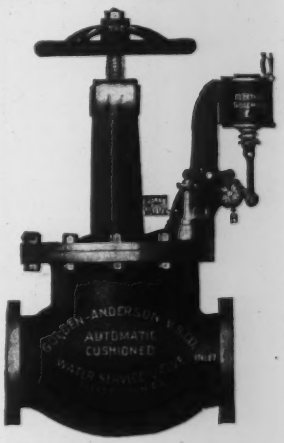
FEATURES

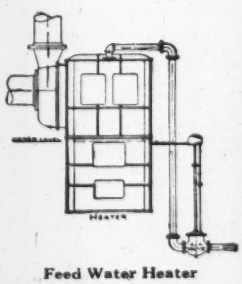
1. Safe Operating Piston makes it impossible for high pressure to enter into low pressure service. Makes accidents impossible.
2. Thoroughly cushioned — no hammering, chattering or sticking.
3. No auxiliary valves or small by-pass —Reliable and uninterrupted service.
4. Heavy throughout — Practically indestructible.
5. Only one adjustment—on the outside. Valve always accessible.

CUSHIONED WATER SERVICE VALVES "FOR FIRE SERVICE"

Electrically Operated From Distant Points

No waste of current as it is only on solenoid a few seconds on either opening or closing of valve.
May be closed and opened from remote points electrically; also hand operated.
Air and water cushioned. No metal-to-metal seats. Virtually indestructible.
Electric Solenoid Connected to Direct or Alternating Current for Continuous or Intermittent Service.





Feed Water Heater

Golden-Anderson Patent Automatic Cushioned Controlling Float Valves

Especially Adapted for Maintaining Uniform Water Level in Feed Water Heaters, Tanks, Reservoirs, Vats, etc.

No Water Wastes—Economic—Durable—Reliable—Air and Water Cushioned—Virtually Indestructible.

Patented Cushioned Automatic Controlling Altitude Valves

For Automatically Maintaining Uniform Stage of Water in Tank, Reservoir or Stand-pipes. Doing Away with the Annoyance of Floats or Fixtures, Inside or Outside. Especially Adapted for Water Works and Railroads. "Three Ways of Closing These Valves."
1st—Automatically by water.
2nd—By Electricity, if desired.
3rd—By Hand.

BULK CEMENT

USERS OF CEMENT IN BULK ENDORSE THIS METHOD OF SHIPMENT AS PRACTICAL, ECONOMICAL AND EFFICIENT.

LABOR IS SAVED. Labor used in untying, emptying, shaking, sorting counting and bundling sacks for return shipment is eliminated.

KNOWLEDGE OF THE ADVANTAGES OF BULK SHIPMENTS leads to its use. Shipping cement in packages regardless of the nature of the job is only a habit.

COSTS ARE REDUCED. There is less outlay for material. Package costs and charges are eliminated. There is no freight to pay on returned sacks.

ECONOMIES ARE EFFECTED. No sacks are lost or stolen. No clerical work to keep track of sacks is necessary. Sack storage is done away with.

MONEY INVESTED YIELDS MORE RETURN. More concrete can be placed; accordingly all equipment earns more money.

EFFICIENCY IS INCREASED. With the same working force more concrete can be mixed and placed using bulk cement than when using sacked cement.

NO SACK INVESTMENT IS NECESSARY. It therefore costs less to finance the job and all money invested is working. Sack investments yield no return.

THIRTY YEARS' SUCCESSFUL USE proves that bulk cement is not an experiment. Its use can be adapted to almost any work of appreciable size.

Pile On Your Overload!

Big husky equipment that walks away with an extra ton or more of overload without a quiver—that's the WATSON TRACTORTRUCK.

If you pile its heavy platform body with six tons instead of the "capacity" five tons, there's no damage and no danger.

The WATSON TRACTORTRUCK is built to *stand* overloads.

Our quarter-century knowledge of the Contractor, his plant and his *work*—stands back of the WATSON TRACTOR-TRUCK.

We built the strength into her. You need equipment that *stands up* when a hitch slips and a girder comes battering down on its deck.

Look up its pedigree—100% Watson—built and guaranteed by Watson—"Wagon Builder to the American Contractor."

Write for full details of its construction.

GOODRICH

TRUCK TIRES

Long Mileage;
Freedom From Trouble;
Backed by the Biggest
System of Service Stations
in the United States

Look for the Sign of Goodrich Service

EVERY important trucking center has its GOODRICH Service Station, amply stocked with truck tires of all sizes and equipped for their prompt removal and application.

Good Intentions do not produce Good Service. Size Counts.

This unparalleled organization maintained by the World's Largest Rubber Factory is at your command.

GOODRICH Service means less "time-out" for your trucks.

GOODRICH Truck Tires keep your trucks on the job.

Equipment and Materials Sold by Advertisers in This Issue

Note Old Method: Double wedges and wire, requiring about 2 minutes to place.

New Method: Universal Clamps placed by 1 man in 10 seconds.

Universal Wire Clamps used on the new McKinley Park Buildings, Chicago

Universal Wire Clamps
are easy to use—they stay put

One man outside the forms can adjust the wires and lock the clamps. It is not necessary to have a man inside the forms.

Their use dispenses with all boring of holes, wedges and twisting of wires. One clamp can be placed and locked in ten seconds. Only three seconds are required for removal without cutting the wires.

And they *stay put*. There's a 1¼-inch take-up that takes all the slack out of the wire and holds against any strain that the wire will stand. The clamp *locks* and is guaranteed not to slip.

There is only one size for all forms, and the first cost and operating cost are far below any other method.

Get a free sample and see how easily it works.

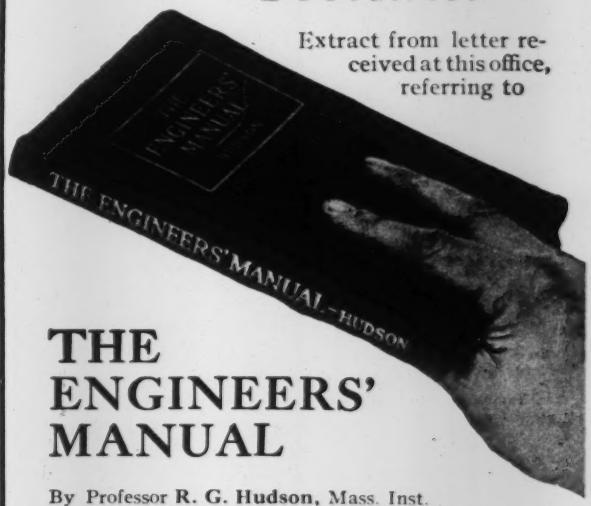
"The Engineers' Toolchest"

Extract from letter received at this office, referring to



THE ENGINEERS' MANUAL

By Professor **R. G. Hudson**, Mass. Inst. of Tech. Assisted by **Joseph Lipka**, **Howard B. Luther**, and **Dean Peabody, Jr.**, Mass. Inst. of Tech.

The Engineering Record said it is the "most concentrated type of engineering handbook."

It presents in systematic order, and in a size designed to fit the pocket, those engineering formulas, mathematical operations, and tables of constants which appear to be most useful.

Have this book sent to you for free examination. The coupon below is for your convenience.

310 *pages, 5x7¾, 227 figures. Flexible binding.* $2.00 *net.*

Just Published

ENGINEERING FOR MASONRY DAMS

By William P. Creager, C.E., Mem., Am. Soc. C.E.

Every engineer engaged in the design and construction of dams should have this book. It is the result of 18 years of practical experience in the design and construction of dams of all types.

250 *pages, 6x9, illustrated. Cloth,* $2.50 *net.*

FREE EXAMINATION COUPON

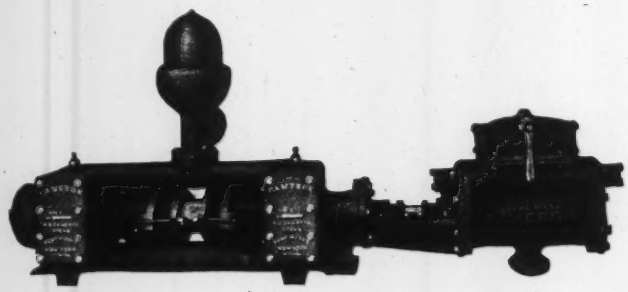
The Slogan of the Cameron—"Character: The Grandest Thing"



This Cameron Pump Built to Withstand Gritty Water

If you have had trouble with pumps that have suffered from the wearing qualities of gritty water, then get satisfaction with this Cameron Outside-Packed Plunger Pump.

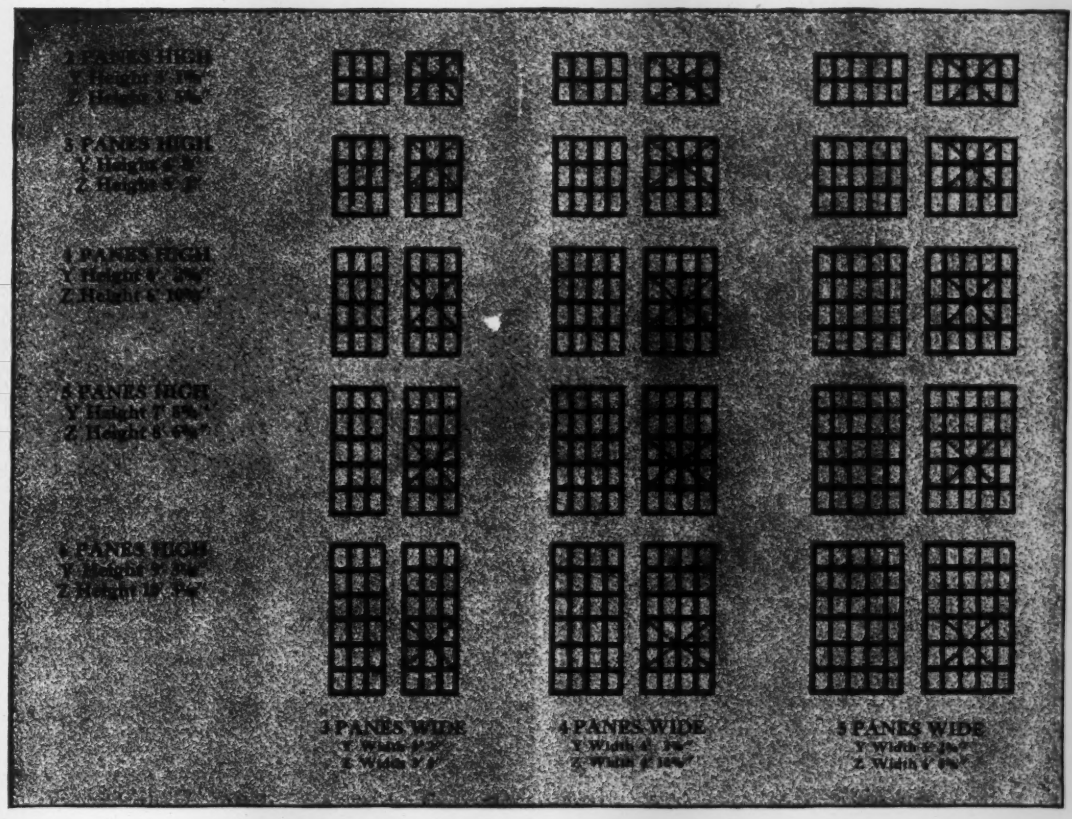
It is much more durable than a piston pump.

The water end has no wearing parts except the packing in the stuffing boxes which can be instantly adjusted from the outside. There are no rods, arm or working parts exposed to rust or damage. The plunger is supported in stuffing boxes, and cannot sag or get out of line at the end of the stroke.

There's a Cameron Pump to overcome every pumping difficulty. Get the right type for your purpose. Write for Bulletin No. 7104 showing many types of Cameron Pumps and giving valuable information.

A. S. CAMERON STEAM PUMP WORKS, 11 Broadway, New York

Offices the World Over



Ready For Your Building Now

These thirty types of Fenestra Solid Steel Windows in both 12 x 18 and 14 x 20 inch glass sizes are at the immediate disposal of all builders

Shipment At Once

They are the most popular units in the entire Fenestra line.

They offer a variety in design and dimension sufficient to answer almost any building need.

They bear the usual high standard of Fenestra material and workmanship and carry the latest Fenestra fittings.

Meet your unexpected rush demands and offset the dangers of railroad delay by ordering these immediate shipment types, either from Detroit or from your nearest Fenestra representative.

An even larger variety can be shipped in ten days.

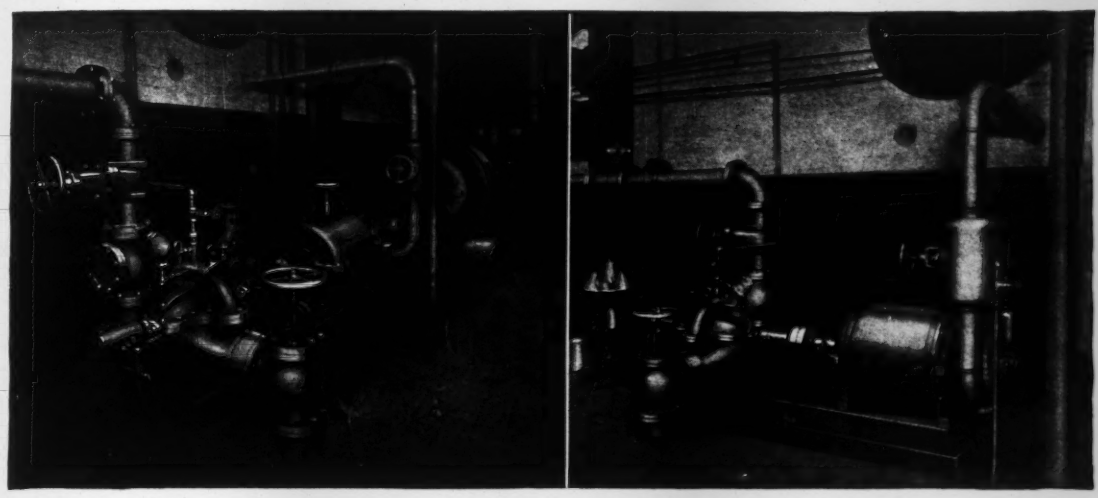
AMERICAN



The Kind of Pump Quality That Commands Satisfaction

In nearly every "American" pump advertisement an actual pump installation is shown. Moreover the name and complete address of the owner is given so that anyone can verify every claim we make in reference to "American" pumps.

During the last two years about 100 pump installations have been shown and in nearly every advertisement the characteristics of the pump are given. In this time there has never been a question that we claimed an efficiency that we could not prove.

The fact is "American" pumps possess a quality of which we are not ashamed. It is our faith in that quality that impels us to constantly offer you the opportunity to prove our statements.

The above illustration shows two views of a pump installed by us about two years ago in the Blue Island Power Plant of the Public Service Company of Northern Illinois.

This unit is an "American" 6 in., Type D S T D, horizontal single stage, double suction centrifugal pump, completely bronze fitted, driven by a 53 h.p., horizontally split shell, Kerr steam turbine, operating non-condensing. The pump is designed to deliver 1000 g.p.m. when operated at 2400 r.p.m. and takes water from the river and delivers it into the general distributing system of the plant.

The owners report the pump is giving excellent service. It is our knowledge that this pump possesses the quality that will command satisfaction that induces us to give the name of the owner just as we are constantly doing of a different installation each week in all our advertising.

Catalog 132 describes about 50 styles of American Centrifugal Pumps. Write for it.

The American Well Works

General Office and Works: Aurora, Ill.
Chicago Office: First National Bank Bldg.

Sales Agencies:

New York City	Birmingham, Ala.	San Francisco	Edmonton, Alta.
Philadelphia, Pa.	Kansas City, Mo.	Salt Lake City	Calgary, Alta.

St. Paul, Minn.	Lincoln, Nebr.	Dallas, Texas	Montreal, Que.
St. Louis, Mo.	Denver, Colo.	Artesia, N. Mex.	

Simple Open-Tank Creosoting-Plant. Tank 2 ft. 6 in. deep, 4 ft. wide and 22 ft. long, constructed entirely of wood and lined with galvanized sheet iron, soldered at all joints. Used for treatment of timbers and boards for roof over machine-room of paper-mill.

8 x 12 in. timber destroyed by decay after nine years' service in paper-mill.

Open-Tank Creosoting-Plant. Note the steam supply-pipes in the foreground and the steam-pipes in bottom of tank arranged in two coils of three lengths each; also the overhead two-ton chain-block traveling-hoists.

"Fungous Growths Destroy Many Wooden Roofs

"New England Structures Suffer Heavy Damage from Dry-Rot"

The above quotation is the caption of an article which appeared in the *American Lumberman*, issue of January 6, 1917, describing in detail the large loss, due to decay, of roof-boards and timbers in cotton- and paper-mills.

Creosoting such material properly will prevent this loss and probably more than double the life of roofs so exposed. This may be done by the Open-Tank system of treatment, which is economical and adaptable to nearly all conditions.

Barrett's TRADE B MARK Carbosota Grade-One Liquid Creosote Oil

Creosoted wood *does not increase* the fire-hazard. When thoroughly seasoned after treatment it will not ignite more readily than untreated wood, and in fact treatment with creosote tends to retard combustion.

Lumber creosoted by the Open-Tank system with a proper grade of refined coal-tar creosote oil will not bleed or exude oil when exposed to the high temperatures prevalent in machine-rooms of paper-mills and weave-sheds of cotton-mills.

" * * * a heavy plank roof is the ideal covering for a cotton-weave shed, provided that it won't rot." (Quoted from article mentioned.)

It Won't Rot if Properly Creosoted.

CARBOSOTA—Grade-One Liquid Creosote Oil is derived from pure coal-tar and refined especially for use by the Brush method and in the Open-Tank system of treatment. It is universally recognized as the "standard" and specified by the largest consumers.

(Note: It is necessary that all wood to be treated by the Brush or Open-Tank methods should be seasoned until air-dry.)

Booklet regarding the CARBOSOTA *treatment free on request.*
